

Petition to the Public Service Commission of Wisconsin regarding AMERICAN TRANSMISSION COMPANY'S application 137ce160 requesting studies pursuant to providing the undersigned electric customers with information necessary to provide informed evaluation of the proposal during the public information meetings phase.

In signing this petition I hereby request the Public Service Commission of Wisconsin to insure that an impartial study of all solutions for this proposal becomes available for evaluation no later than the announcement of proposed high voltage transmission routes in Fall 2012. One option included in the comprehensive comparison of costs and benefits should combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation incentives with improvements to low voltage transmission lines as needed for in-state reliability. Total funding for all options should match the amount Wisconsin ratepayers would assume over 40 years for MTEP11 development including Appendices A, B and C or an estimated \$40 billion in construction costs. The study should assess impacts on in-state job creation, regional carbon emission reduction and policies that could place limitations on distributed generation and other energy self-sufficiency goals.

Please print all contact information CLEARLY!

Petition to the Public Service Commission of Wisconsin regarding AMERICAN TRANSMISSION COMPANY'S application 137ce160 requesting studies pursuant to providing the undersigned electric customers with information necessary to provide informed evaluation of the proposal during the public information meetings phase.

In signing this petition I hereby request the Public Service Commission of Wisconsin to insure that Wisconsin ratepayers will be able to evaluate impartial studies of alternative, non-high voltage transmission, solutions for this proposal no later than the public announcement of proposed routes in Fall 2012. One alternative solution for cost-benefit comparison must combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation incentives with improvements to low voltage transmission lines as needed for in-state reliability. Total funding for the alternatives must be equal to the amount Wisconsin ratepayers would assume for MTEP11 development including the Multi Value Projects in Appendixes A, B and C or an estimates \$40 billion of the \$80 billion in total construction costs. All studies should include benefits that are important to citizens and ratepayers including in-state job creation, affects on residential and business operation costs, regional carbon emission reductions, impacts on in-state Renewable Energy goals and generation and local distribution restrictions that could discourage energy self-sufficiency.

Petition to the Public Service Commission of Wisconsin regarding AMERICAN TRANSMISSION COMPANY'S application 137ce160 requesting studies pursuant to providing the undersigned electric customers with information necessary to provide informed evaluation of the proposal during the public information meetings phase.

In signing this petition I hereby request the Public Service Commission of Wisconsin to insure that an impartial study of all solutions for this proposal becomes available for evaluation no later than the announcement of proposed high voltage transmission routes in Fall 2012. One option included in the comprehensive comparison of costs and benefits should combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation incentives with improvements to low voltage transmission lines as needed for in-state reliability. Total funding for all options should match the amount Wisconsin ratepayers would assume over 40 years for MTEP11 development including Appendixes A, B and C or an estimated \$40 billion in construction costs. The study should assess impacts on in-state job creation, regional carbon emission reduction and policies that could place limitations on distributed generation and other energy self-sufficiency goals.

Petition to the Public Service Commission of Wisconsin regarding AMERICAN TRANSMISSION COMPANY'S application 137ce160 requesting studies pursuant to providing the undersigned electric customers with information necessary to provide informed evaluation of the proposal during the public information meetings phase.

public information meetings phase.

In signing this petition I hereby request the Public Service Commission of Wisconsin to insure that Wisconsin ratepayers will be able to evaluate impartial studies of alternative, non-high voltage transmission, solutions for this proposal no later than the public announcement of proposed routes in Fall 2012. One alternative solution for cost-benefit comparison must combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation incentives with improvements to low voltage transmission lines as needed for in-state reliability. Total funding for the alternatives must be equal to the amount Wisconsin ratepayers would assume for MTEP11 development including the Multi Value Projects in Appendixes A, B and C or an estimates \$40 billion of the \$80 billion in total construction costs. All studies should include benefits that are important to citizens and ratepayers including in-state job creation, affects on residential and business operation costs, regional carbon emission reductions, impacts on in-state Renewable Energy goals and generation and local distribution restrictions that could discourage energy self-sufficiency.

In signing this petition I hereby request the Public Service Commission of Wisconsin to ensure that Wisconsin ratepayers will be able to evaluate impartial studies of alternative, non-high voltage transmission solutions for this proposal no later than the public announcement of proposed routes in Fall 2012. One alternative solution for cost benefit comparison must combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation for incentivizing improvements to low voltage transmission lines as needed for interstate reliability. Total funding for the alternatives must be equal to the amount of incentives with improvements to low voltage transmission projects. Appendixes A, B, and C contain estimates of \$4 billion of the \$80 Wisconsin ratepayers would assume for M-EP11 development including the Milwaukee Value projects. Appendixes A, B, and C contain estimates of \$4 billion of the \$80 billion in total construction costs. All studies should include benefits that are important to citizens and ratepayers including in-state job creation, effects on residential and business operation costs, regional carbon emission reductions, impacts on interstate Renewable Energy goals and generation and local distribution restrictions that could discourage energy self-sufficiency.

One alternative solution for cost-benefit comparison must combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation incentives with improvements to low voltage transmission lines as needed for in-state reliability. Total funding for the alternatives must be equal to the amount Wisconsin ratepayers would assume for MTEP11 development including the Multi Value Projects in Appendixes A, B and C or an estimates \$40 billion of the \$80 billion in total construction costs. All studies should include benefits that are important to citizens and ratepayers including in-state job creation, affects on residential and business operation costs, regional carbon emission reductions, impacts on in-state Renewable Energy goals and generation and local distribution restrictions that could discourage energy self-sufficiency.

Petition to the Public Service Commission of Wisconsin regarding AMERICAN TRANSMISSION COMPANY'S application 137ce160 requesting studies pursuant to providing the undersigned electric customers with information necessary to provide informed evaluation of the proposal during the public information meetings phase.

In signing this petition I hereby request the Public Service Commission of Wisconsin to insure that Wisconsin ratepayers will be able to evaluate impartial studies of alternative, non-high voltage transmission, solutions for this proposal no later than the public announcement of proposed routes in Fall 2012. One alternative solution for cost-benefit comparison must combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation incentives with improvements to low voltage transmission lines as needed for in-state reliability. Total funding for the alternatives must be equal to the amount Wisconsin ratepayers would assume for MTEP11 development including the Multi Value Projects in Appendixes A, B and C or an estimates \$40 billion of the \$80 billion in total construction costs. Petition to the Public Service Commission of Wisconsin regarding AMERICAN TRANSMISSION COMPANY'S application 137ce160 requesting studies pursuant to providing the undersigned electric customers with information necessary to provide informed evaluation of the proposal during the public information meetings phase.

In signing this petition I hereby request the Public Service Commission of Wisconsin to insure that an impartial study of all solutions for this proposal becomes available for evaluation no later than the announcement of proposed high voltage transmission routes in Fall 2012. One option included in the comprehensive comparison of costs and benefits should combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation incentives with improvements to low voltage transmission lines as needed for in-state reliability. Total funding for all options should match the amount Wisconsin ratepayers would assume over 40 years for MTEP11 development including Appendixes A, B and C or an estimated \$40 billion in construction costs. The study should assess impacts on in-state job creation, regional carbon emission reduction and policies that could place limitations on distributed generation and other energy self-sufficiency goals.

Dear Folks,

Sorry to be so late with this. We are going through some major transitions here on the farm and with our health. I finally got out for signatures on the Memorial Day weekend. We believe the federal gov. is funding some of this and is it so to speak a stimulus package? Our Township of Berry has not yet adopted a resolution and have a meeting coming up on June 18, 2012. This is all very close to Indian Lake Park. We appreciate all your efforts on our behalf.

Ronan, Jean + Kevin Stolz

Regarding Docket 137ce160

On-Line Petition: <http://www.thepetitionsite.com/1/promote-comprehensive-energy-planning-in-the-midwest/>

We the undersigned ask the Public Service Commission of Wisconsin to insure that Wisconsin ratepayers will be able to evaluate impartial studies of alternative, non-high voltage transmission, solutions for this proposal no later than the public announcement of proposed routes in Fall 2012. One alternative solution for cost-benefit comparison must combine aggressive energy efficiency, expanded implementation of demand side management and increased dispersed generation incentives with improvements to low voltage transmission lines as needed for in-state reliability. Total funding for the alternatives must be equal to the amount Wisconsin ratepayers would assume for MTEP11 development including the Multi Value Projects in Appendixes A, B and C or an estimated \$40 billion of the \$80 billion in total construction costs. All studies should include benefits that are important to citizens and ratepayers including in-state job creation, affects on residential and business operation costs, regional carbon emission reductions, impacts on in-state Renewable Energy goals and generation and local distribution restrictions that could discourage energy self-sufficiency.
