Dewey: P40-3 and C30-3

The Dewey Corridor is a sensitive wetland area. Construction of this scale will surely degrade the streams and lakes. An entire ecosystem could be destroyed by the necessary logging, road creation and resulting erosion. This area has countless endangered species which would potentially be displaced by invasive species as a direct result of this project. It is not possible for a project of this scale to be executed without significant and adverse impact on endangered species, lakes and streams, bogs, and the aquifer itself.

Bryan Creek Corridor: O40-3, O50-3, O60-3

Bryan Creek Corridor is unsuitable for the proposed transmission lines. It contains sensitive wetlands that will be compromised by this landscape altering project. Countless acres of endangered species habitat will be potentially destroyed. This corridor will divide animal habitat and disrupt their mobility. While in this area I have spotted bald eagles, osprey and a Golden eagle. This is the only place I have ever seen the endangered golden eagle. This project has great potential for ecological disaster.

Dewey: P40-3 and C30-3

I object to the power lines coming through the MNWC due to the impact on biological & ecological diversity in this area. I have personally seen several Bald Eagles & one Golden Eagle in my visit here. I was also pleased with the lack of invasive species that occur in many other areas. The power lines will allow greater access for things that don't belong (opportunistic species, invasives, & unauthorized recreationers) while driving away more sensitive species unwilling to deal with this intrusion. The ATC proposed high-voltage powerlines don't belong in the MNWC.

It is very disturbing that you people can tell me what I can do with my land. You take are land and give up peanuts for it. Then you say we can grow things under your power lines. Then the company sells the power lines to another company and they say no you cannot. We pay taxes on land we can't do anything with. If you wanted to do something for us, you could help us get the land that you forced us to give up get removed from the tax roll. I guess that would help. But the land that you took is owned for timber production and now we can't even grow christmas trees under the lines. Even though they will never get anywhere near them. You take and never give anything in return.

If the goal is to provide reliable service in the "U.P. & Northern Wisconsin" then the further north the substaion is located the more cost effective & efficient the entire project will be. Locate it north of Seymour in Maple Grove.

Also, the Green Bay area is spending millions on upgrades to both Hwy 41 & Oneida Street to make a good 1st impression on visitors to the area -- so then why would anyone even consider running ugly powerlines along Hwy 41?... the project should run through rural farmland.

Subject: Your HONEST consideration

Bay Lake Project Committee:

Undoubtedly, your organization is being bombarded by letters, petitions and phone calls, but I'm begging you to read this e-mail.

As an educated and concerned citizen and homeowner in the possible pathway for the new Bay Lake Project (Park Place/Green Bay - Lombardi/Hazelwood & Hwy 41 - a main thoroughfare for Lambeau Field), I ask that you look at less populated alternatives. Not only are we a healthy, developing area, we are a clean, safe and family-friendly neighborhood which would like to maintain its integrity, as well as the aesthetic appeal brought about by recent roadway and area improvements, adjacent to the stadium and Green Bay Packers organization.

My note could be lengthy and full of logistical rhetoric, but I'll keep this relatively brief. The question I pose to you is a simple one, and one that I hope you can answer honestly - all electrical and monetary (business) reasoning aside:

If your home was in the possible pathway of a large-scale and long-standing power line, would you (personally) want to be residing beneath it?

I, myself, have yet to find a family member, friend or even stranger who has answered this positively.

Thank you for your time and fair consideration in this matter.

Sincerely

Laurie Csuy

Potentially affected address: 3734 West Mason St. Brown County Port & Solid Waste Department
0 Solid Waste Transfer Station

Brown County owns & operates a solid waste transfer station @ above address for all residential waste within Brown County, interruption of that service would lengthen inbound & outbound garbage transfer traffic & may increase costs for Brown County customers.

I was part of the Martec focus group mailing group study from ATC - 6 months ago, it is great to see the final product that was mailed out to the customers.

I am writing to let you know that I am absolutely against the proposed Bay Lake Project for electric transmission lines from Green Bay to upper Michigan. I have yet to see any REAL data or information to prove this new transmission service is even needed. In fact, it is simply a ¿perceived¿ or ¿possible¿ future need. I do not feel there has been enough focus on alternatives to this proposal, on addressing options for reducing energy needs, or on increasing energy efficiency. What your company should be doing is looking at ways to reduce energy usage. The development of this project does not even support the ¿possible need" for the State of Wisconsin and its¿

residents. Wisconsinites will be the ones affected by the NEGATIVE impact of our property value, of our parks and wetland in the area, and to any future commercial development. This is a great concern express by many throughout my neighborhood, not just by the home owners who would be directly affected due to their property location.

I am especially concerned about the negative health implications of the electric and magnetic fields. The negative health effects far out way any possible ¿good¿ that might be perceived by this project.

My children and I are extremely sensitive to extraneous sensory stimuli such as the high pitch humming of florescent lights, the squealing noise of some electronic devices, and even the ticking of a clock, etc. I am quite sure the emanation of the constant humming, hissing, sizzling, or crackling noises from these power lines will be easily heard by my family (and many others with this kind of

sensitivity) since we are located in very close proximity to the proposed route. There truly is no reason to erect these structures and lines in such a highly populated residential area. If this is truly a ¿necessary¿ evil, then at the very least it would be much more humane to take a non-residential route! I am aware that there are non-residential route options to consider, but it would appear that money and savings for ATC is more valuable than the wellbeing of the residents in Wisconsin. I find this highly unethical and absolutely irresponsible. Perhaps you might consider a new route option that would include YOUR neighborhood and/or YOUR back yard.

Sincerely,

Michelle Eddy

Comments:

I currently live in a well respected division of property in Green Bay (known as the Meacham "Park Place" estates) off Hwy 41 / Lombardi Ave. I find the proposal to construct a power structure (lines / substation / etc...) ill conceived and detriment to the livelihood for all who live along this area. I have even read that former ATC vice president Mark Williamson is raising questions about the need for a major power line that would connect the Upper Peninsula and northern Wisconsin.

Why do you feel the need to come in and decrease the value of my land/neighborhood even more than it already is? I will have no equity left in my home. To my point, my property before the housing market recession a few years ago, was valued at nearly \$210,000. Current market conditions have my home now valued around \$180,000. And it just isn't my land. You can honestly in good conscience force people to live on a property where your project would greatly decrease the value of their homes/land (more so than what they have already lost). Recouping any equity would be difficult thereby creating a situation where the mortgage becomes more than what the land is worth - thus the homeowner can not sell because it is at such a loss. There is already a multi-million dollar construction project occurring to expand HWY 41. Properties are already being adversely affected with this construction. Taking that into account, with foreclosures, the economy, and property values at an all time low you really feel this is a viable solution for this area? There is NO place for your towers along the residential path of HWY 41!

And for what? To serve the Upper Peninsula - all because the U.P. was blacked out for a day after [you] took one of your lines out of service for maintenance and the only other line feeding the peninsula was taken out by a lightning strike? First, I think the people that live in the UP can go without service for an evening - its called candles, power generators, and flash lights - something that the rest of us in this world are prepared for when a power outage occurs. In fact, it was noted in a news article from the JS online that "cheaper options should be explored, especially given the small population in upper Michigan".

Second, if this service is to assist the UP (even though you say will assist in servicing Northeastern WI as well), then put the Bay Lake Project further north. There is no reason to disrupt the countless number of individuals and families who will be affected here along your current proposed route along HWY 41. I am to understand there are alternative routes. There is farm land and/or more unpopulated areas which could be utilized in this proposal. Find a route that doesn't disrupt a densely populated area and forcing many into more financial hardship than they are currently experiencing.

The real question is - does this serve the preferences and/or needs of the majority of people along

Bay Lake Formal Comments - Additional Comments by County/Municipality

the proposed route (not the people it will serve but the people who will have to sacrifice for those people)? My answer to this, as I can imagine most others, is no. If the answer "no" greatly outweighs the "yes" then your decision to place this project along HWY 41 does more harm than good. This project only aims to serve a few at the expense of many. We don't believe locating your line along highway 41 is a good idea

1. Too close to a very highly populated area,
 2. Too close to high traffic area (will become even more),
 3. Would be difficult to maintain from an accessibility standpoint,
 4. Airport fly pattern would be a concern
 5. Would be too close to peoples yards

The proposed high voltage lines along Hwy 41 should not be so close to the homes on the West side of the Hwy. The project will greatly detract from the aesthetics of the neighborhood and will have negative impact on my property value. I have questions about health concerns and have questions about the constant humming noise. The environment will also be negatively impacted by such huge lines.

Please consider these lines somewhere else. We've already lost many trees & our neighborhood has been negatively impacted by this huge highway project. We do not want these wires in our neighborhood

I am writing this letter today to share my thoughts on how this power line is going to change my family's lives. I feel these power lines need to be placed on the East side of Hwy 41 where it is mostly businesses because of the negative impact it will have on our lives if placed on the west side. First and most important research shows there are negative health issues for children who live near the lines. I am currently pregnant and the healthy develop of my child is very important and something you have an impact on. We purchased our house 1 1/2 years ago and these powerlines will decrease our house value, making us lose the money we worked hard for to purchase our house. Please help my family live and stay safe by placing the lines on the East side of Hwy 41 where the residential population is much less Thank you

I am writing this letter today to share my thoughts on how this power line is going to change my family's lives. I know we will have to move out of our home that we saved up to buy for years. Not only will we need to sell but our property value will have decreased so much that we will lose all the equity in our home if not more. The reason we will have to move is because my wife has very sensitive ears and hearing and will not be able to deal with the constant humming, buzzing, hissing or crackling that the lines make. We are big outdoors people and need to be able to use the outdoor space. In addition we are about to have our first child and I am not willing to take the chance of ruining my child's development from the electric and magnetic fields. In short, these power lines will affect our lives so much that we will lose years of our hard work. Thank you for your consideration of not placing the power lines on the west side of Hwy 41 and placing them on the east side where the residential impact will be less.

I visited at your informational meeting today.

From the map I received, only the corner of the 12 acre parcel of land (currently in agricultural but within an industrial/business park) might be in the corridor, but I find it unlikely to be involved after your first narrowing of the corridor.

And since you likely need about 40 acres for the substation in GB area, I find little you plan will likely affect this parcel.

Thus, I will still consider any offers to purchase and develop are unlikely to be interfered with by this project.

If you know of anything different, please contact me.

Thank you.

Subject: American Transmission Co proposed power lines

I have a question about the proposed power lines that are going to be built by American Transmission Co from the Green Bay area to Upper Michigan to deliver more power to the UP. My question is why can't a power plant be built in the UP where the power is needed then all those power lines wouldn't be necessary? Larry

We live near the Hwy and the noise is terrible & to think along with putting a Hwy through a residential area, that there now is a possibility of putting high power lines along this Hwy. Seems as though there isn't any common sense being applied here.

PLEASE SEE ATTACHMENT!

To whom it may concern:

I appreciate the opportunity to weigh in on the potential high voltage corridor being planned for areas that may impact my residence and my family. I was unable to attend the local meeting and am happy to have another opportunity to provide feedback.

Although I understand that there may be business justification for the new high voltage corridor, I am strongly opposed to any plan that would locate transmission lines on or near my residence and my family. Although there are many reasons for opposing this potential plan, I will list the major ones here.

Number one is health concerns. Although I understand there are no studies that conclusively link these high voltage lines with cancer or other potential health risks, I don't feel my family should be a test case for that possibility. There are numerous examples in our country where industry has caused health issues with workers or local residents despite what the company initially said about the risk. I'm also concerned about the potential for noise and noise issues coming from the wires. I'm retired and my wife is a light sleeper. We don't need to be kept awake listening to any high pitched electrical sounds.

My second issue is aesthetics. I can't imagine that anyone looking at large power poles and electrical wires would view my neighborhood as aesthetically appealing. I bought this property so I could look up and see my beautiful oak trees, not poles and wires.

My final issue is the potential negative impact on my home value. I have already seen my fair market value drop significantly during the recent recession. I can't imagine a prospective home buyer choosing my home over others in neighborhoods with no high voltage power lines running near or through the property.

I can't imagine the logic in running lines and installing large poles in any heavily populated areas. I wasn't at the meeting, so I hope there are good reasons for not locating the lines in the country.

Respectfully yours,

Running it thru this middle of the community, whether it be Ashwaubenon or Green Bay, puts a "blight" on the neighborhoods in the area. Communities are trying to be more aesthetically appealing. These lines, if put in the 41 corridor, would not help (for power yes - not for aesthetics).

Please keep that in mind when considering routes.

Comments:

To Whom this may concern,

Very nice website; however, after spending much time trying to understand exactly where the power lines will be located, we are still confused. Can you please answer a question regarding where the transmission lines will be located in respect to our property at 2447 Vallier Ct Ashwaubenon WI ? We received a "Sorry we missed you" postcard and this is the first we are aware of this project. Since we live in a community where the power lines are underground we are sadden to hear that a major powerline will be located near our home. Any information you can provide would be greatly appreciated.

Thank you in advance.

Sincerely,

Jeffry and Nancy Nitka

We bought this house in June 2012. The owners never told us about the plans of ATC. That this rite is being considered for development. So now we may lose this house that we bought in June. It is with the upmost urgency that we be informed if we are losing are house. We have already stuck alot of money into it, and we do not want to lose any more money on a house we may not own. Please advise us as soon as possible on the site who have chosen.

We live at 1186 Cormier Rd. Green Bay, WI. 54304 we went to the public meeting you had in Green Bay on Oct. 9, 2012.

At the meeting I had a map printed with my location on the map. The map number was U50-1. We live 4 houses from Hy. 41 over pass /Cormier Road. They are going to be widening and adding two or more lanes to Hy 41 and putting noise barriers up. Construction is scheduled for 2013. This Hy 41 is very very busy and makes it impossible to have any peace and quiet when you are out side or have your windows open. We are not quite in the airplane flight pattern but the planes cut the pattern to go to the SE. and come over our house and add to the noise. This is a residential area and we have taken enough noise and discomfort and sincerely ask you to place you high power lines some other place.

Comments:

Hello,

Thank you for the open house and opportunity to submit comments. I have a huge concern regarding potential health effects which will also have the potential to lower the value of my and my mother-in-law's home. It feels like the potential health issues have been minimized when I have heard some people have had very huge effects from such power lines. I myself have driven through Illinois through an area where there were large power lines and could feel a drop in my energy. I was not expecting this or looking for this - after I felt the difference I looked around to see what the cause could be. The only difference was the massive power lines.

My mother-in-law lives in the yellow area close to Hwy 41 - I am very concerned about her! My property is a Little Bit over from that - no more than two blocks to the west of the yellow area. This doesn't make me feel comfortable at all!! Who determines this line of potential concern?

Also, I live, drive, and work in this area. Much of my time is spent in the affected area. And what about workers who live in the area who didn't receive a mailing? They will be spending much of their time in this area - they deserve to know about this!

I would appreciate this power line being constructed in a far less populated area, if at all.

Thank you for listening,

Bunnie Schunck

Mildred lives along the Highway 41 Corridor in Ashwaubenon. Concerned about living so close to possible 345 Kv & 135 Kv power lines. Sizable population along Highway 41 Corridor. (Both residential and commercial.) Believe the route should be placed west of highly populated area to less populated area. Concerned about effect on Property value in living in such close proximity to high voltage power lines. Thank you.

I am concerned about all of the negative impact this project will have in my neighborhood. There is little or no room for these large transmitters along the highway as well as the possible health issues make this a real concern for me and my neighbors.

I understand the need for our neighbors up in the U.P. However there must be a more rural area for these to be built.

Thank you for allowing my opinion to be considered

Subject: Bay Lakes Project

To whom it may concern:

After hearing about your possible project, I have taken the time to review all of the information that you have provided to the general public. I have to say that I am generally disappointed with the potential routing along the Highway 41 corridor through Brown County.

As I am certain that you are well aware, the State of Wisconsin is spending significant budgetary dollars on the upgrade of the Highway corridor right now. The state also spent a great deal of time and effort gathering the opinions of local residents as it relates to appearance of the improvements being constructed. The state has gone above and beyond as it relates to the construction in an effort to create a visually appealing pathway through the county having spent what some would say are needless funds to create facades with brick appearance, concrete stampings, etc. It would seem counterproductive to construct high wire lines through this area in the footsteps of the State's construction efforts.

As part of the project to support future transportation needs in the area, the state has had to eliminate significant amounts of wooded space in addition to placing the highway closer to nearby residential areas. Despite the planned construction of sound barriers along the corridor through populace areas, local property owners are yet to understand the full impact of the project on their homes.

Now, ATC has proposed to claim additional land along the highway to construct high voltage transmission lines imposing itself further onto the residents it claims to serve. This tactic seems both needless and short sighted. As the proposed substations are all in rural areas, ATC clearly understands the need to minimize the impact on municipalities. I can only hope that ATC is as capable of doing so when it comes to power lines.

Please revisit this proposal. I will be following the ongoing developments closely.

With regards,

Erik Swan

My wife and I are strongly opposed to the potential power lines running next to our house, I would not feel safe, and it would reduce the value of our property. We have waited 20 years for a sound barrier and were looking forward for it, and then we have to deal with high voltage power lines. We were hoping once the sound barrier went up our home value would increase. I would not buy a house with power poles like the ones being talked about so close to the house and I can't imagine anyone else would either!

We live in a nice neighborhood, but we have to endure the highway way noise & the construction, now you're telling us you might be putting these monstrosities up. They will add to the noise with their hissing, humming, crackling, etc...Why put up the sound barrier? You are defeating the purpose. The sound barrier will help with our resale value, but again you are defeating the purpose putting those up bringing our value down. Not to mention the health effects to could have on us. With all the work that has gone into Hwy 41 to make it safer and more aesthetically appealing you are defeating the purpose again making the Hwy look ugly and cheap. In all aspects this would be a very very bad decision to put these up along hwy 41.

Thank you,

As a Realtor and homeowner in "Park Place" I oppose any high voltage electrical transmission lines along Hwy 41. Our home backs up to the Hwy and concerned for our health. It will cause medical problems due to constant humming, crackling from EMFs, also environment problems to parkland/wetland areas, and will definitely have negative impact to property values. We are already enduring negative impact from all the trees taken down for the expanded highway. We have witnessed the departure of birds, wildlife and displaced deer with more Road kill occurrences.

I am for "Wind energy" Cost of land to hold power lines & Steel transmission lines, very-very costly. Up keep to transmission lines very costly what with winter weather, high winds and maintanece - Costly.

Takes up too much land - miles & miles - Wind cheaper in the long run - Also property owners recieve money.

No impact on wetlands, roads under transmisson lines. Problems there.

Wind energy can be in several areas and one Windmill can serve over 5,000 + familys - 1/3 cost of on land transmission wires. My Dad had a windmill in Middle Inlet & we had radio and no electric Bills - Served our family well at that time of my life.

over

->

Wind energy the cheapesp way to go for U.S.A. family.

CA has moutain sides with "wind mills" - hundreds on one hill - Way to go - no oil - no gas - just free wind

In the long run - we should have all wind mills made in U.S.A. - How many jobs would be made in this county - Thousands and how many people to maintain - Thousands. No waste to dump from "wind mills" - No Smoke from wind mills - etc.

By now I hope you & your companies get the picture.

Sincerely, Virginia Walker

Comments:

My name is Donald E. Will. I have property in segment A95-2. This is near Gilas Lake in the town of Beaver. My property is about three miles north of highway 64.

1. If the route through my property is selected three houses would be impacted in the immediate vicinity. Your line would go over Jeff Vanlanen's house. It would come extremely close to Steven and Julie Biehl's home.....which is a \$300,000 plus year around dwelling. It would also impact a trailer just north of me. Kevin Pillath owns a trailer there, and moving the line west would go over his house.
 2. If the route is selected do not put the line on the east side of the existing right of way. Put the line on the west side.
 3. I am opposed to selecting this route. I use this property for recreation purposes. Cutting additional right of way would severely impact deer hunting for me. We already hunt this area and depending on the weather get shocks from the power lines.
 4. I also have this property for investment purposes. I feel this expansion would negatively affect the value of my property. The Gilas Lake Association is also opposed to this route. In the annual association meeting the landowners had a letter written to oppose this route as the area to expand. Property owners on or near the lake would lose property value. The line would be much more visible from the lake.
 5. Eagles and osprey nest on our property. There is a major wetland that would be devastated. A small creek empties into Gilas lake. Your would cut additional trees along this land which may impact Gilas Lake.

1. I am opposed to the proposed line along highway 41 which would run through Ashwaubenon.
 2. I believe it would be harmful to health. It also makes a humming, hissing, or crackling noise during rainy weather.
 3. It would also impact property values.
 4. Please consider an alternate route or an update that is not so much voltage.

Subject: De Pere Proximity

Hi Local.....

I live at 707 Westwind Ct. in West De Pere, 54115.

I've tried to "zoom" in to your proposed development.....with no success.

Can you tell me where your proposed lines, construction or other facilities would exist relative to my location?

Please advise,

John Van Wassenhoven

Dear ATC,

My name is Amy Anderson and I am invested in a group that owns property at 1511 Beach Tree Drive. It has been brought to our attention that ATC is exploring possible routes for the power line expansion to the Bay Lake Project. One of the discussed routes involves installation of high voltage lines along Highway 41, very close to my property and neighborhood. I have a number of concerns if a proposed route along the HWY41 corridor is considered and strongly urge ATC to investigate other possible routes. First, my property is very, very close to the highway and would be in immediate proximity of any power lines. Unlike other neighborhoods, our area does not have much space between our property lines and the highway...with some of it being lost with the recent HWY 41 reconstruction. I am concerned that a proposed installation would have a negative impact to the value of my property and of my neighbors around me. Secondly, there appears to be a number of questions regarding the range of the electric magnetic field, stray voltage, crackling noise, and other possible issues. Again, our neighborhood is in a very unique situation where we are immediately next to the highway and would have little or no buffer to the line's effects. In fact, some of our neighbors are less than 100 feet from the edge of HWY 41. Third, our area has already endured much in recent years with the HWY 41 reconstruction. The addition of power lines would seem to take away from the work and effort spent on making the HWY 41 corridor so aesthetically pleasing. And last but not least, I guess my primary concern is the impact to the neighborhood and surrounding areas. Again, I emphasize that this area does not have the buffer or space that some of the other routes demonstrate. The proposal to go through HWY41 is right through a residential area and to me that seems like a poor choice when given other options.

I JUST VOTE TO RUN THE POWERLINES THRU AREAS WHERE IT WILL HAVE THE LEAST AMOUNT OF NEGATIVE IMPACT ON HOMEOWNERS. I.E. - EYESORE, ANY POSSIBLE HEALTH RISKS, NOISE, & PROPERTY VALUE DECREASE. I REALIZE IT MAY BE MORE EXPENSIVE OF A PROCESS TO RUN THE LINES THRU MORE UNINHABITED AREAS, BUT I WOULD RATHER PAY EXTRA ON A BILL THAN ALL THE OTHER NEGATIVES.

THANKS,
BRUCE ANDERSON

I am against this project. It frightens me in so many ways. First and foremost, my health and my families health is of great concern. I understand the studies are inconclusive so with that being said, you should caution on the side of error and NOT place them in our area. I dont want someone in my family to get cancer from these - just so you can improve service. NO Thanks!! I also am concerned about my property value while they would not be in my backyard - but the homes that they would be place in, will decrease in value which will trickle down to my property value. I do not believe in this project - it is not good for our health AND it will allow for me to lose \$ in my home (-all of my hard-earned money!!)
DEFINITELY, NO TO THIS PROJECT!!!!
NO NEED FOR IT!!
Disrupts our world in SO MANY WAYS!!

I hope that when you come through my area & neighborhood that you respect property values which are already low & either bury the power lines as they currently are or put the power poles between the proposed highway sound barrier & the highway & not in peoples back yards! people work hard on improving their property & value.

I built this home 21 years ago. I would like not to move because of something that make no logical sense.

If you would like to place the power line thru the area could you please do the safer altenative. Place them under ground thru this area if you should choose. It would be possible to put them under the lane they are going to add for the off ramp.

I have spoke to my neighbors they agree that it makes no sense with the amount of homes and familys you are going to disrupt. Please find an alternative route or place them under ground.

Subject: Power lines

My name is Jerold Athey

I live on Beech Tree Drive and have for twenty one years. My wife and I built our home here and our family. We know there is a highway behind our home and have put up with it for all of these years. It does not bother us.

Now your company would like to put power lines threw my back yard or should I say next to my back yard that can indanger my family and my home. And from what I understand you can do this if you get permission to use the route.

If you choose this to be your route would you bury the line?

Other wise I would like to ask if you are going to purchase my home if you decide to do so and if you are going to give my family enouph to build a home just like the one I have now lot and all?

I hope that the power lines will not come through our neighborhood on US 41 north. I have heard several stories of humans and animals experiencing adverse effects because of thier proximity to high voltage power lines. Some of our neighbors already suffer land lose and increased noise levels due to the highway project. Please consider using a site that will expose fewer people to these effects and that will not impact our property values in a negative way.

Sincerely,

Faye I. Bailey

I am concerned that if powerline 9005 through or near populated areas the ability to sell my home would be greatly and negitively affected. if people know there is a power line coming through I don't feel people will want to buy my home or live in or near an emf field. even though there may not be any scientic date to sit there is no emf danger. and i know this will not show up in any essment calculations.

Reviewing your proposal along highway 41 for transmission lines in the Green Bay area, this is the wrong area for installation of lines.

Millions of dollars now being spent to improve the roadway along Highway 41----adding lines and high towers along the roadway would not provide an esthetic experience, would take away from the highway construction \$ currently being spent, would diminish house values in proximity to the line----move the lines somewhere else.-----Pete

Your developing proposal for a High Voltage electrical transmission line along Hwy 41 for the purpose of improvement of service to N.E. Wis. and Upper Michigan should definitely be designed away from all residential areas. I do not approve of this being so involved and in the midst of our many homes and a nearby school. This definitely would lower our property values have intense health concerns and would just over all have a very negative impact on our lovely neighborhood. The answer is "No." Frances B. Borell

The State of WI has spent millions of dollars on the US 41 project through De Pere, Green Bay and Howard. It will be an impressive beautiful project when completed. The corridor is no place for a transmission line and should be avoid. I feel it should be extended around the metropolitan area.

Subject: transmission lines

I am really concerned about the transmission lines being erected along the west side of highway 41 (meaning from Appleton north which would be the west side and in our back yard) We live by the southbound Lombardi exit ramp and not only has traffic been increasing over the years and highway construction developed - now in addition, they are considering transmission lines too. We are strongly opposed to it for many reasons - one of which they will destroy our property values and are a known health hazard. We are pleading to consider a more open route for this project!

Please inform us as to the status of this project and if there is anyone that we could contact to help us.

David,

Thank you so much for your prompt response. I am attaching an article regarding the health risks of living so close to these poles (as I am sure that you are aware) - but the article is interesting. This is such a densely populated area with many families living here that I am truly hoping that they can come up with a more viable plan.

Thank you again and have a great day.

We strongly oppose the high voltage electrical transmission lines proposed to be placed along HWY 41. The proposed project is better suited to a location more distant from residential property lines. The transmission lines would have a negative effect to property value. Homeowners have already suffered from property depreciation as a result of economic issues. The possibility of health concerns related to electric and magnetic fields and constant humming, hissing noise is a major cause for uneasiness and worry. The newly completed HWY 41 project turned out to be more attractive than anticipated, so why ruin its appeal with such large high voltage lines? In addition residents and businesses along the HWY 41 corridor have already had their share of construction inconvenience.

Please consider a route that does not disrupt neighborhoods and negatively affect residents. Surely there are better alternatives for the location of such transmission lines.

We own property in Green Bay and on the Wisconsin Shore of the Menominee River in Beecher WI. I am concerned with the impact this project will have on the environment /and property values in both locations. As I understand, large areas of land are clear cut on both sides of support towers - not a pretty sight and many unanswered questions as to health concerns to people and animals.

Thank You,
Sally Dery

I have worked hard and saved all my life and am now in the process of building my dreamhome at 1948 Treeland Drive. I am very concerned that running high voltage transmission lines so close to my property will negatively impact the beauty of my future neighborhood and my property's value. Also, I am even more concerned about the health effects of these lines. My brother sustained a serious back injury and has had a Medtronic Spinal Stimulator implanted to ease his pain. He can no longer have MRIs or CT scans because the magnetic fields can cause the wires in his back to overheat and burn his spinal cord. I am very concerned that, because of questions related to the electronic and magnetic fields associated with the high voltage transmission lines, my brother would be unable to visit my home in fear of the serious consequences. I ask you to consider my concerns when choosing the route for the lines.

Thnk you.

For years here, in Dairyland, there has been health concerns regarding high-voltage lines near livestock and humans. Also, this current public suspicion detrimentally affects home values for nearby properties. Aesthetic appeal of the new construction on the west side of Green Bay will be negatively impacted. It would be a shame to cancel the beauty of brickwork, lighting, and greenways just constructed at the section of Hwy 41 rework. For these reasons, I'm hoping ATC can find another location for the transmission lines, keeping the value of wetlands and wildlife in mind. Thanks for taking time and spending money to hear from me and others.

After attending one of your open houses, we now understand everything a little better. However, we still want to express our concern that we do not want these transmission lines in the neighborhood where we live. We have a beautiful park in the area (John Muir) and many families use this. I think the only area where these transmission may fit would be along Highway 41. But even that would be a very tight fit. Plus with the expansion of the Highway and making everything look very "nice", we don't think the Highway 41 preliminary route would be a wise one. There are better choices.

Thank you for listening

It was bad enough when they expanded HWY 41 that they didn't put up a sound barrier fence to reduce the traffic noise, now you want to construct power lines to add an eye sore, health problems, and reduce property values.

It would be different if I would directly benefit from this project but I don't.

Why not build a power generating plant closer to the people that need the power?

I AM VERY SAD AS I SIT ON MY COUCH AND CONTIMPLATE YOUR PROPOSAL. I AM DISABLED AND RELY ON SS AS WELL AS MY PERSONAL ASSETS FOR CURRENT AND FUTURE MONTETARY SURVIVAL. MY BIGGEST ASSET IS MY HOME WHICH BACK HWY 41. I AM SURE THAT YOU KNOW AS WELL AS I DO THAT TRANSMISSION LINES RUNNING THRU MY BACKYARD WILL DIMINISH THE VALUE OF MY PROPERTY BY AS MUCH AS 100%. IN OTHER WORDS I AM SITTING ON A PROPERTY WORTH NOTHING AND I FIND THAT TO BE VERY DISCOURAGING. PRIOR TO YOUR PROPOSAL I WAS CONSIDERING THE SALE OF MY HOME BUT NOW I MUST DISCLOSE THAT THE NEW OWNER COULD HAVE TRANSMISSION LINES CROSSING THE PROPERTY. IF YOU NEED 150' ON EACH SIDE OF YOUR LINES AND YOUR LINES ARE ON THE WEST SIDE OF HWY 41 THEN YOU BASICALLY COVER MY ENTIRE PROPERTY. IF THIS OCCURS I WOULD EXPECT THAT YOU WOULD BUY ME OUT AT FMV PRIOR TO INSTALLATION. I KNOW YOU WOULD FIND THIS TO BE THE FAIR THING TO DO. REMEMBER, MY HOME IS MY LIVELYHOOD. PLEASE BUY ME OUT OR TAKE YOUR PROJECT THROUGH THE OPEN AREAS OF THE SEYMOUR AREA. THANK YOU.

I don't understand why you would consider running this project up such a populated coridor. Some of the other routes I saw under consideration were much less populated.

Furthermore, after all the work that has been done on US-41 I don't understand why any consideration is being given to a project pathway that would presumable disturb much of that work.

THIS LETTER IS REGARDING THE BAY LAKES PROJECT ALONG THE HWY 41 CORRIDOR.

I ASK THAT YOU WOULD PLEASE CONSIDER A LESS POPULATED ROUTE AND NOT PUT ANY TRANSMISSION LINES ALONG HWY 41. THE AESTHETIC IMPACT WOULD BE VERY NEGATIVE FOR ONE. ALSO THE ELECTRIC AND MAGNETIC FIELDS WOULD BE BEST LOCATED AWAY FROM A POPULUS LOCATION. I BELIEVE ATC DOES IT'S BEST IN THE INTEREST OF SAFETY AND IS RESPONSIVE TO THE CONCERNS OF THE PUBLIC TO WHICH IT ULTIMATLY BENEFITS.

-PLEASE CHOOSE AN ALTERNATE ROUTE AWAY FROM HWY 41.

THANK YOU (signed)

Subject: Bay Lakes Project Comments

Good morning

Our home is located on the very near west side of highway 41 in the city of Green Bay. The proposed power line along highway 41 has us very concerned on several levels. The potential decrease in our property value, the potential harm to the wood like atmosphere our lot currently has and the impact to our health/safety with powers lines in our back yard.

Please reconsider running this power line through the residential section of the city of Green Bay. We have been dealing with highway 41 construction for many years already and there will be additional construction for many more years on highway 41. Our neighborhood has had too many changes already.

Thank you for considering our concerns.

Although my property doesn't "touch" high 41, it is very close. My husband & I are reaching retirement age. It is possible that we may be selling in the next few years and I believe power lines would make it more difficult to sell. Even if we don't sell, I have some concerns on the health effects of high tension electrical wires in a residential area.

Dear American Transmission Company: (ATC)

We are against ATC running the high voltage electrical transmission lines along the Hwy 41 corridor.

We are concerned about the negative impact to our property value. We are also concerned about health concerns related to the electric & magnetic fields. The constant humming, hissing noise, sizzling, or crackling is inappropriate for our densely residential area.

I am concerned about running high voltage electrical transmission lines along the HWY 41 corridor for several reasons. While locating the lines along the Hwy 41 corridor may be cost effective in construction, in the long run, I feel it would be better to run the lines in more rural areas, where there is less of an impact on residential and heavily populated neighborhoods. I am mostly concerned about health related problems that have been associated to the electric and magnetic fields. While studies have been inconclusive, I would like to make sure there are no health risks before constructing a potentially hazardous corridor. I also have questions relating to humming hissing, or crackling noises emitted from these lines. These noises might also have health risks associated with them.

I object to locating the Bay Lakes Project along highway 41 in Green Bay.

This is a residential area, and resale and rental of properties will be negatively affected.

Kennedy Elementary School is only about 3 blocks away from the proposed corridor - as a retired teacher, I can tell you students do not need another distraction of buzzing and other noises.

Will people enjoy Packer games knowing they're 3 blocks from high power lines?

Please go elsewhere!

Running these Transmission Towers anywhere along the 41 corridor would be wrong for these reasons:

1. Too close to homes:
 2. Running through John Muir Park would be too close to where people gather:
 3. Would not look good along completed 41 project.
Better to run a different route or not at all!

Avoid the duck creek river/railroad.

1. Area south of Hwy 29 to Hwy U at Brown/Outagamie line. Leave the duck creek corridor as is for green space and trail use in future.
2. Try to follow existing ATC line routes and areas already in highway or other urban use.
3. Try to avoid residential areas as possible.

Above are listed from most important 1 to lesser 3

Subject: Additional transmission lines

Importance: High

Dear ATC,

I have been wondering where the proposal is at for additional transmission lines through Brown County. We are in the area directly adjacent to County FF (Hillcrest Road) and Mason Street on the west side of Green Bay. Where I am located is an area filled with numerous households with children. You can imagine the concern in the neighborhood. We also understand that studies have been done and although A TC has stated negative health effects to be "weak" and "unlikely", it does nothing to assure a concerned parent, especially with contradictory studies to be found.

Since myself and several neighbors were unable to attend the informational sessions, I wanted our voices to be included in discussions. Please be aware of our issues.

Thank you,

Terry

We understand that these proposed transmission lines will generate a substantial amount of noise 24 hours a day 7 days a week. We already have to contend with the highway traffic noise. Please reconsider and find an alternate maybe more rural route to run these lines. Another highly negative affect these lines will have on us is the value of our property that we work hard to maintain will go down in value. These reasons are more than valid ones and so we are writing in opposition of these transmission lines along Highway 41. Thank you for your consideration & please find an alternate route to put these lines.

Sincerely,

Debbie & Mike Johnson

Re: 41 Corridor for High Voltage Lines

I am writing to express my strong opposition to the high voltage transmission lines proposed for the U.S. 41 corridor as a proposed route for the Bay Lake Project. My family would be directly impacted by this. We already have a large cell phone tower in our neighborhood and I was made aware of the the health dangers of electric magnetic fields in a seminar which I attended two years ago.

Thank you very much for your consideration in NOT locating these high voltage lines along the U.S. 41 corridor.

The proposed in U60-1 goes among a line of homes, including ours. If it is tight among the 41 (4 or 6 lane), it would be less of an eye-sore to homeowners - (especially on the W. side of 41). E. side of 41 is more commercial & apartments or some wetlands/vacant) and would be better for us. The whole line is for the UP and NE WI - (?) so it could go 1 or 2 miles further west to avoid going through the city (Green Bay/Ashwaub/and De Pere)

Panicking because NE WI & UP experienced a blackout last spring is no reason to destroy land & property values. Our electrical is good enough. Minor interruption or inconveniences are part of the program. Even if you put the new lines in there is NO guarantee they won't fail If there's more maintenance & there happens to be a lightening strike.

I say Keep what lines we have. I don't need my property value decreased even more with your lines coming through.

As for the jobs you "will" create, they will have jobs maintaining the lines instead.
No to Baylake Project! Regard, Errin Kolden

Please reconsider running these transmission lines along Hwy 41 in the Green Bay area. That section of the city, especially between Oneida & Mason streets is mostly residential and this project will have a negative impact on property values & quality of life for those making their homes there. The recent Hwy 41 road construction has caused enough disruption and environmental deterioration & the people living in that area should not be exposed to more.

I have many concerns regarding this project, as follows: 1) Potential loss to property value. I have worked all my life for my home Everything I have is in it. This, if the Hwy 41 route, were chosen, would devalue my home & make it impossible to sell.

2) Wis DOT just spent millions of taxpayer dollars to make HWY 41 very appealing This would be detrimental

3) Health concerns. I have read a lot on the internet as there are correlations to CANCER, dizziness, fatigue etc Studies have been inconclusive -> which means they Don't Know

4) Concern over sounds made by these lines to my pets

5) We are not even done w/ Hwy 41 reconstruction & now we have to deal w/ this. Please find a different route. We have truly done our share for the good of the general public.

Thank you for your consideration!

Subject: Bay Lake Project

I continue to have many concerns regarding use of the HWY 41 corridor for the high voltage transmission lines. Simply put, if the lines are placed on the west side of the highway they will be too close to our homes, maybe not by code, but or comfort.

I have personally walked the streets and spoken with hundreds of people regarding this project. What I am finding is that most people are simply unaware of what is going on. They think this part of the HWY 41 reconstruction and just throw it away. This project is hitting our neighborhood at a very inopportune time. We are tired. We have attended meeting after meeting after meeting on the HWY 41 reconstruction project. It does not seem fair that this same group of people gets hit again, especially when they are down, meaning exhausted from the HWY 41 project.

Again, it just does not make sense to me to run these lines along HWY 41 when is heavily populated with residents and small businesses. There must be a better way, such as going around the residential areas from DePere, Ashwaubenon, Green Bay and Howard Suamico and hooking up with HWY 41 further north if ends up being the corridor of choice. Is that a possibility?

I could also suggest it go on the east side of the highway where there are wet lands and parks, but again, it is my feeling that these lines just don't belong in the middle of highly populated areas, especially given health concerns in which studies have shown inconclusive results. Inconclusive is just that - they don't know. Can you please err on the side of considering the people and their health and well being?

Thank you for your consideration.

I went to the Radisson to learn what I could. do not think they should put Hy 41 - in the plan what so ever. I live on Wiesner St. my area is quite populated voltage of 345 is very high. Makes noise etc. I don't want anything too close to my properties that will take my value away from what I own. I also have rental property on Wiesner St. The compensation could not make a difference. I will pray they find a different way if this truly needs to be done & is really necessary. Not a change I believe that doesn't need to happen.

I guess I don't understand why this needs to go through an area that has a sizeable population. The noise in this neighborhood is already loud - we don't need more. Even more important are the possible health concerns.

The highway 41 corridor is not the place to route high voltage electrical transmission lines. I get it that it needs to be done. I get it that it needs to be done at a low cost. I have many self-interested reasons why the lines should not come near my house. But honestly, the most sensible option is to route these lines through the most remote corridor possible, not a high-density population area that already has the burden of a highway, and its noise/visual/emissions pollution. I should think that ATC would be able to make sense of this on its own, especially in view of the health effects that are alleged.

Please do not put the high voltage electrical transmission lines in front of our homes. I am not in a position to lose money on the value of my home when this is done. I have been a single parent for many years and no money could be put away for me and my future. Now I am over sixty and the only thing I have is my home. These lines are horrible to look at and there are fears of health issues from them. Please find an alternate route for these lines. Please consider all these concerns.

Thank you,
SL Manabat

Hey Tia this is Chip McDonald. My number is (920) 217-7932. My address is 2020 Angie Ave, Green Bay, WI 54302. I would like some information about where the transmission lines are going in Northeastern WI. We own some property on the West side of Green Bay and as well as some property near the Town of Morgan. We're just kind of wondering where exactly that line is going. If you could please give me a call. We attended an informational session a couple years back but I don't think we kept as much information as we should. Thank you. Bye.

Subject: Bay Lake Project Comments

Here are a few reasons for not putting high transmission lines in our area.

1. John Muir Park & Park area

Large trees

People from different schools play ball there; also tennis courts.

Kennedy Elementary School is only a couple blocks from the park and

MacArthur Elementary is a few blocks west of there.

2. We are concerned about the health issues from the high voltage.

3. Urban area. We have been living here 38 years and have developed a small bird sanctuary.

High tension line and birds is not a good mix. Also who wants to look at huge poles with high voltage in their backyard?, especially during a high wind storm. Value of the houses in this area will go down. Who wants to buy a house with high tension lines running through the property.

4. Wet Lands are adjacent to the back of our property.

5. We already have to put up with the additional lanes (and speed) of traffic on Hwy 41, and now you want to add new power lines and a substation.

6. Seniors don't take well to change.

We are extremely upset that you would think of running the Power lines thru a residential area. That is a 3 - 4 block long line of houses plus a church before you get to open industrial land, then to find out the lines would be behind the proposed berm in their backyards is worse yet. Property values will go down, as well as loss of backyard space for children to play in. There must be some other place where residential homes are not so impacted. I live down the street so it is a little ways from me.

Please reconsider.

I disagree with your opinion that transmission lines should be placed along Hwy 41. Several of my concerns are listed here.

- 1.) Not appropriate in this highly populated, residential area
- 2.) Distract from the recent upgrades and improvements along Hwy 41 at Mason St., Shawano Ave and Lombardi Ave.
- 3.) Already contend with high levels of traffic noise
- 4.) We will have to deal with increased traffic and the noise due to heavy use of the Packers' stadium, Resch Center, ShopKo Hall, and all the new development being planned by the Packers' organization.

Please consider other routes.

Thank you,
Diane

I am extremely concerned that with the high voltage electrical transmission lines being run along HWY - 41 that there will be a large decrease in the resale value of my home. We reside in the only area (Green Bay) along Hwy - 41 that has homes privately owned. We've lived here for 18 years and are close to retirement. We will never be able to see our home for what it is worth. Please consider placing the power lines on the opposite side of Hwy 41 (EAST SIDE) Not the west side. Thank you.

I already must put up with the increased noise from traffic on 41. There is no sitting in or enjoying my front yard.

How you want to take what small enjoyment I have from John Muir Park and the small wooded area we have.

You would damage the neighborhood - drive out the animals, including the deer that live in the wooded area, and leave us up a creek.

Find a location that does NOT harm so many lives.

First thank you for this opportunity to speak. I don't like the plan to put up power poles along Hwy 41 in Green Bay.

It is a high residential area with many Children living there. My concern is safety & health. The sound barrier plan is wonderful & should go through immediately. I know how these power lines look by Clintourilles & Shawano. Not very pretty. I think the Hwy looks wonderful - why clutter Green Bay with these monstrous structures. By all means an alternate Route not so close to residential areas is our preference. please try to work this project in another area. Granted we made the choice of living by Hwy 41 with traffic but certainly not with buzzing high power lines.

Decrease in property values, decrease in residential property marketability, Concern about long term service access and safety are my concerns where this high power line will be allong highway 41 next to highly concentrated residential properties.

Property values of residential homes adjacent to these large poles and power lines, including homes within a few blocks away wihtin sight, will be negatively impacted. These neighborhoods will be less desirable, less attractive to potential buyers, allong with the perception of safety risk, be it stray voltage, lines dropping from ice etc. - Regardless if the perception is real or not from an engineering perspective.

Long term service access concern in that possible inconvenience of property owners, where ATC will need a possible 10' wide drive access for trucks & equipment in residential back yards, also safety concerns if ATC intends to park trucks & equipment on shoulders of Hwy 41, as this is the busiest North - South Hwy in the area & this does not seem safe.

In summary, I am against the power lines being routed allong Highway 41 in Green Bay area. I believe it would be safer & less impact on property values if this was installed in a rural area, possibly several miles west of Green Bay in the country side. Thank you for considering my comments.

Subject: Bay Lake Project

Dear Mr. Hovde:

I have been notified by ATC that I am one of the homeowners affected by the Bay Lake Project. After studying your maps of the proposed transmission line routes, I still have one question:

Where, exactly, would the proposed line run through my area? I live in Green Bay, one block south of 9th St., about 1/4 mile west of Hwy 41. Based on the positioning of the existing lines north of the Hwy 41/I-43 interchange, am I correct in assuming the new line would be on the immediate east side of highway 41, at least between Lombardi Ave. and Mason St.?

Regards,

Todd S. Slapp

I am concerned about the health issues connected with Hwy Power lines. As a child, I grew up around the Power lines and have seen neighbors & family members with health issues and prefer to live my life today with less Risk. Please choose a nonresidential Route for the transmission line project. As a taxpayer, we chose our home location with it's view & safety. We already deal with Hwy 41 traffic noise, and feel it unfair to effect our Property Value further with transmission Poles. Thank you, Charlotte Smet

Dear Bay Lakes Project Team:

The proposed transmission line should NOT follow HWY - 41.

As a resident with close proximity to highway 41, I have many concerns regarding this proposed route including, health, property value & aesthetics. It's bad enough that the traffic noise is getting worse each year as our taxes increase and the population grows, but the proposed powerlines along with our property values will decrease the look of our neighborhood along with the "risk" to our health and our kids health. I will vote "No" and fight to prevent these powerlines from being installed along HWY 41. Sincerley, Glen Smet

My concerns are these with the Hwy 41 transmission lines. There is an impact on the aesthetics on the recent improvements to Hwy 41. Having lived near high voltage lines previously, there is a constant hum. If there are less populated routes, those should certainly be considered first. It would also be nice if our neighborhood service were improved!

I do not want the lines in my Back yards because of the property values going down. The possible loss of my back yard, and the health issues that might be there.

Not to mention the park should be left alone.

If you select this way I would rather have you buy my house, then to have the lines on my property.

Comments:

I do not want these lines in my back yard, because I could lose up to half of my back yard and all the trees I have there as a barrier from FF road. My back yard is only a 100 feet long from my patio door.

Sincerely

Harvey B, Steinfeldt

We were not pleased to find out that one of Hy. 41 locations runs right through our neighborhood. If you select this route it will go through John Muir Park and it will ruin our neighborhood and cause property values to fall. We have one of the most beautiful neighborhoods in Green Bay. Jerry & I are asking you to please consider a different corridor than the Highway 41 corridor. Our retirement funds are invested in the property we own. If the value goes down - so will our retirement. Again please reconsider. Thank you.

I did attend an open house on your proposed routes. I am opposed to the new electric transmission lines preliminary route along Hwy 41. I do not feel exposure to EMF should pass through urban areas where many people are exposed. I am sure nobody wants the lines to pass through near them, but the least number of people affected seems to make more sense. It would be optimal to have no people affected and pass through open areas, but that probably is unrealistic. If that is not possible, then the route with the least people affected seems to make the most sense. I am concerned for especially the children that would be affected and all people in general. Thank you.

I ABSOLUTELY oppose the proposal to build High Voltage Power Lines in my area. This is a residential zone & would significantly reduce property value. Worse yet is the high EMF coming from these power lines. When I am at a Friends house - who lives near these lines, there is little or NO reception to my cell phone. My ears buzz & my hair stands if I am close to these wires with high Emf. I get paranoid & nauseous every single time I am there. My friend has a child with a strange birth defect, born while she lived in this area. The Humming noise in my ears drives me nuts. These EMFs will affect our wild life that by law is protected! It will affect our appliances TV Reception, Phones & any other electrical units in the house, including computers as well. I protest haneously the mere thought of poisoning us with these lines that are not necessary to be put here. Find another route to bring electricity to the far north of us. the cost alone of doing this is economically wasteful Beyond imagination!

I am concerned about a decline in property value and the ugly sight of the lines in our residential area. This project does not belong in this area, so close to Lambeau field and near peaceful woods and lots. I also have concerns about the health problems related to magnetic fields. I would think you could find a more appropriate area for the power lines.

Wish to enter my opornion that the transmission line - NOT - be run along Hwy 41 for the following reasons

1. Reduce my Property Value & my neighbors
2. Makes for an ugly looking SkyLine
3. Stray electricity - Noise
4. Health Concerns EMF's - to close to high population areas and schools.

Dear ATC,

My name is Scott Williquette and I am invested in a group that owns property at 1509 Beach Tree Drive. It has been brought to our attention that ATC is exploring possible routes for the power line expansion to the Bay Lake Project. One of the discussed routes involves installation of high voltage lines along Highway 41, very close to my property and neighborhood. I have a number of concerns if a proposed route along the HWY41 corridor is considered and strongly urge ATC to investigate other possible routes. First, my property is very, very close to the highway and would be in immediate proximity of any power lines. Unlike other neighborhoods, our area does not have much space between our property lines and the highway...with some of it being lost with the recent HWY 41 reconstruction. I am concerned that a proposed installation would have a negative impact to the value of my property and of my neighbors around me. Secondly, there appears to be a number of questions regarding the range of the electric magnetic field, stray voltage, crackling noise, and other possible issues. Again, our neighborhood is in a very unique situation where we are immediately next to the highway and would have little or no buffer to the line's effects. In fact, some of our neighbors are less then 100 feet from the edge of HWY 41. Third, our area has already endured much in recent years with the HWY 41 reconstruction. The addition of power lines would seem to take away from the work and effort spent on making the HWY 41 corridor so aesthetically pleasing. And last but not least, I guess my primary concern is the impact to the neighborhood and surrounding area. Again, I emphasize that this area does not have the buffer or space that some of the other routes demonstrate. The proposal to go through HWY41 is right through a residential area and to me that seems like a poor choice when given other options.

Please do not place the high voltage electrical lines along the Hwy 41 corridor. I am greatly concerned about the health affects on people and pets. These electrical towers will take away square-footage from people's yards and negatively affect the aesthetics of the entire neighborhood and area. This will cause another drop in property values, when we have not recovered from the last drop, and bad economy. Who needs, or can afford, this severe negative impact on our lives, compounded by all the recent and future road construction? Please build these transmission towers and high voltage electrical lines in a far less populated and remote area.

I am disappointed that you would consider a route for a power line threw a residential area. The effect on health safety property values and quality of life for people fronting on the powerline will be huge. a rural route would impact fewer people and could be kept away from people and from animals

Please do not route this line up Hwy 41 past all of these residents - or put it up the middle of the highway at the very least.

I feel that the high voltage lines should not be put along HWY 41. One of the more rural choices should be picked. There are a number of reasons to avoid HWY 41: environmental concerns, health issues, possible sound pollution, unsightliness, negative impact on property values, and the fact that people are truly sick of all the recent construction in our area and want it to be done.

I am on the corner of N Overland and Riverdale (Hy J) - low territory wher ethe DNR is concerned about wetlands.

My biggest concern is the effects of this project on the environment.

The abandoned railroad would make a good open space, but it's on low territory - a vale. My property is naturally "home-scaped" - no lawn mowers, no street lamps. It would be great to keep it so.

Our father has deeded his Town of Athelstane, Marinette County property to us, his children where your preliminary route Segment P390-2 is proposed. It is 30 acres of land with a year-round home on it next to my uncles, Kenneth and Gerald Gajeski. About 1/2 of the property is in a red wood plantation. This is part of the same plantation that was planted in 1963, the year JFK was killed.

I request that no power line go through this property as my father still spends a lot of time there in the woods hunting and fishing nearby lakes and streams. A power line like that would destroy the beautiful woods and trails through this property and devastate myself, brother and sisters, including our children, and especially my father who has worked so hard.

I respectfully request no power line go through this property.

Regarding Bay Lake Project (May 21, 2012)

Dear Project Team Members:

As property owners on Hillcrest Road (County FF in Hobart, WI), we are quite concerned about the ATF power lines being proposed for the area.

Hillcrest Road is the prime residential area of Hobart. The type of power lines being proposed would be a jarring addition to the landscape and would be totally out of place. It would adversely affect the value of property in this area in a very significant way. This is a high value, highly taxed area of Hobart. Obviously, your project would have a significant negative impact on the tax base of Hobart.

On a personal note, we have been working on our property since 1990 and have been living there for 16 years. We have spent almost half of our lives and much of our fortune making this property a home for our family and investing in the property to provide financial security for the future. We have built a home, developed trails, gardens and even planted a three acre native prairie restoration along Hillcrest Road. All this investment and work would be a significant risk if your line went along this highly developed corridor.

In our time on this property, our lives have been disrupted by not one but two water projects, by a major sewer interceptor project, and now by the Highway 29 development. It is just not fair that we are again being targeted for a pejoect that will not only have no benefit to us, but would have a significant adverse effect on the value for all we have worked for these past two decades.

We still find it hard to believe that you would seriously consider the prime area of northern Hobart for your project. Please choose a more appropriate corridor. You may contact us at jierzaks@gmail.com or jjerzak@wipfli.com. We look forward to hearing from you.

Sincerely,

Jane and James Jerzak 4515 Hillcrest Road Hobart WI 54155-9112

We are in segment A240-1.

We are in a residential area. We are VERY concerned about the adverse affects the magnetic fields from the power lines will have on our health and the health of our neighbors and children if you convert these lines to a 345-kilovolt line. These lines are close to our home and our garden is directly under it. Also, these lines run by Hillcrest Elementary School. I work at the school and see the children go on the nature trail and they are directly under the transmission lines. We ask you for our health and the health of children, not to run stronger lines in this A240-1 segment. Thank you!

It appears A240-1 and C610-1 go parallel to County J and through residential areas. This MUST NOT occur! Potential for cancer risk is much too high.

Polo Point is a retirement community, this draws people in 50+ age group, far more susceptible to cancer!

As residents of Hobart we have witnessed the destructive results of the ATC/Wright Tree Service "Tree Trimming" (or should I say "Land Scalping"). We have also been involved w/neighbors who have had to put up with the disrespectful treatment by the tree cutting agency. Your current practices are ridiculous and devalue our property values. They have also contributed to a growing problem (no pun intended) of invasive plant species (one being garlic mustard). Your lack of respect and concern for people and property in your path is appalling! As a trustee for Hobart I request you set up a separate meeting w/all officials and appropriate staff to go over in GREAT detail EXACTLY what your plans are for this corridor.

For over a year in 20011 the Village of Hobart expended thousands of taxpayer dollars for legal guidance and staff activities resulting from ATC's disrespectful and arrogant behavior and attitudes exhibited to local property owners having the misfortune of an easement on their parcel, now controlled by ATC. The nightmare clear-cut "bowling alley" through miles of premier neighborhoods in Hobart remains an un-remedied travesty.

If such behavior permeates all the new projects on ATC's table, our hearts go out to the many future affected communities and Wisconsin property owners. Your business model is a poster child for the worst abuse of unchecked corporate power. You owe apologies and amends in numerous areas of Wisconsin and should at least make some feeble attempt at cooperation with landowners hence forth.

Dear A.T.C. and B.L.T.,

My name is Susan Erdmann (Mrs. Wayne Erdmann). I attended an informal meeting at "The Woods" in Crivitz in regards to the proposed routes for the new power lines. All B.L.M. employees were courteous and helpful, especially dealing with a woman (myself) who could not stop crying. Wayne and I have our retirement home on the parcel with Brian J. Erdmann's name. We actually have all three of our sons listed, but Brian appears first. (Please see the enclosed map. I have highlighted all family members' land.)

Our Story.....Our Land

In 1975, as a young married couple, we purchased five acres of land. Wayne was a teacher and I was a homemaker. We had two small boys, Brett (2) and Brian (5). We began building our cottage/retirement home by ourselves. It was always a work in progress and took many years to complete.

In 1977, Wayne talked long and hard to convince me to purchase additional land with other family members. He stated, "Land will only increase in value as our area is developed." But what really sealed the deal was his...WHAT IFS. What if some day our boys would want to build a home of their own...we would have grandchildren playing next door...twenty acres would provide them with the privacy they would need...we would be close together as a family. Thus our dream began. We invested years of payments and hard work in our land.

For years, every Easter week we picked up seedling Red and White pine trees from Green Bay Preble High School's FFA Club. With a hand spade our boys helped plant 1,000 seedlings. They called their growing forest "Pine Tree Land." Every December they would walk their forest and look for a tree for the cottage. Never one of our Red or White pines. They looked for a "Charlie Brown Tree"...the scapiest Jack Pine they could find. They hiked, biked, camped, and built roads in their Pine Tree Land. They grew into men who love and respect the outdoors. We took pictures of them with their trees and watched as their trees grew taller than they did. Our first crop of trees are now 30 to 40 feet tall!

Several years ago we had our land divided into three lots and gave each son approximately 7 acres of land. I can't begin to tell you the number of times, over the last 35 years, my husband has reminded me how right "he" was about investing in the land. Of course, I had to agree...until now! It seems unfair that our land can be destroyed in value, our trees cut down, and most importantly, our grandchildren's safety WILL be put at risk!

Our son, Brett and his wife, Tania have built on our "What If" land. They are raising their 3 young children on "Pine Tree Land." As fate would challenge a perfect world, their youngest daughter, Mira, has been dealt a challenge no child should have to endure. She contracted through a virus a life threatening autoimmune disease. She recently had a Bone Marrow Transplant in Cincinnati, Ohio that will replace her own immune system. It will take several years for her system to develop. Mira spent 8 months in Cincinnati. In order for her to come home this summer, her entire family needed to be in strict isolation. We were fortunate to have just the place...Pine Tree Land and our combined family cottages. Mira and twin brother, Wyatt, are 4 years old and big sister Johanna is 6. They played all summer away from other children and the general public. They can not be in public schools because of the threat of germs. This fall they walked through Pine Tree Land to Aunt Sally and Aunt Jeanne's home (we have been blessed to have these retired elementary teachers in our family) and are being home schooled at their home. Please refer to your map again...they are walking directly under the proposed power lines. This area is their playground, their home, and the world as they are in such strict isolation.

Last, but no least, I have done extensive research in regards to radiation from these power lines. I found MANY conclusive studies and they all strongly state that children "should not play

Bay Lake Formal Comments - Additional Comments by County/Municipality

under or around these power lines."

Our combined family: Erdmann, Zehren, Palmer, Mangless, and Taylor families all enjoy this land. Many of our young people already have plans of building here to be close to relatives and friends and to enjoy the beauty and bounty the land provides. Please, please let our land remain undisturbed for all of us to safely enjoy. Leave our trees to grow with our grandchildren. We can't recreate what has taken us 37 years and more to develop.

Please consider alternate routes. It would seem using existing line routes would make more sense as that land has already been compromised.

I have enclosed some very personal pictures of Mira. One picture is from the Critical Care Unit that shows her on full life support while she was in Cincinnati this January. Another picture is from our Halloween party on their cottage deck this fall after her summer in isolation. The bathtub picture was from this November 4. Mira had her central line removed from her heart and this was her first real bath where she could soak and splash all around since June of 2011. She is doing so well. Her chemotherapy, all X-rays, and radiation are behind her. She CAN NOT grow up with power lines running through her backyard.

Well, There you have it. I have bared my soul. This was more difficult to put on paper than you could ever imagine.

Sincerely,
(signed)
Sue Erdmann

Dear American Transmission Company,

My name is Wayne Erdmann. I attended an informational meeting on the proposed transmission lines through northern Wisconsin. We were encouraged to write our comments and concerns to your company regarding this venture.

My parents started vacationing in the Crivitz, Wisconsin area over 70 years ago, then built a cabin in 1952. Like many young boys, I enjoyed the forest environment and eventually discovered an area that became my "special place." I would take my bike and BB gun and spend endless hours exploring this environment.

In 1970 I found that the land I had enjoyed as a child was for sale. Since I had recently graduated from college and became married, my wife and I were not financially secure, but decided to purchase a five-acre parcel of the land I had enjoyed as a child. Eventually I was able to purchase twenty more acres.

I discussed the intended investment with my brother sisters and discovered that they were also interested in purchasing acreage, as were my brother-in-law and wife's cousin. The end result was a family investment of approximately one hundred acres upon which we planted thousands of red and white pine trees.

As my wife and I approached retirement age, we realized that the value of our land was not financial but rather family oriented. Therefore we kept the original five acres and gave the rest of our land to our children and grandchildre, as well as my sisters.

The owners I am referring to are La Fond, Erdmann, Zehren, Mangless, and Palmer. All are extremely concerned about the possibility of losing our legacy to the construction of the new power lines, which may cross our lands. This concern not only entails the land which would become worthless, but also the loss of our trees and threat of illness to our families.

We also have a major concern that has not been confronted. Our 4-year-old granddaughter, Mira Erdmann, has a rare autoimmune system disorder. Last year she was diagnosed with a very rare disease that left her without an immune system. She has spent the better part of her life in and out of hospitals, She was rushed to Children's Hospital in Cincinnati where she had a bone marrow transplant. After nine months she was released but still reports to the Milwaukee Children's Hospital for treatment. Since she must remain in isolation, the spring, summer, and fall seasons are spent at their cottage near the sight of the proposed power line. Since she is so fragile we are very frightened by the possibility that the "discharge" from the power lines could be very caustic to her health.

I am not an engineer but I understand some of the numerous variables involved in the decision making process. However, it appears to me that the logical choice would be to utilize the existing power lines. I believe it would be more cost efficient and less disturbing to the landowners and the environment.

Thank you.

Wayne Erdmann and family

We live along side 41-141 by the EB overpass. The current lines run North on the West side of the highway. We live on the east. With the expansion of the highway there would not be any room for the new lines. We would prefer that the lines would run alongside the present ones if that location would be chosen. We do have a concern with the increase voltage for health issues. Please take these things in consideration.

Property is Along Segment U60-2 PAGE AJ10

This land has been in my family over 100 years. My grandfather started his farm there then past it to his son, my father, who farmed it until his death in 2004. It was good in a way that neither had to see how the state's Hwy 141 project went down the middle of their farm. taking about 20 acres. (Poor choice this route was more expensive and still crosses a railroad track in 2 places between Lena & Hwy 64). Then the Town of Pound wanted to build a road along the west and southern border of our property taking more for their right of way for again a road that was not a good choice. They, so far, have not gone through with this. Over the past six or so years we have been planting various trees and shrubs over the entire property costing us a minimum of \$15,000. to us. We have plans for a pond soon. Now you want access to our property forever making it for the most part useless for anything. My grandfathers land was prime land - if you go in it will be totally worthless. We have plans for that property and one or another group want to take it from us. We are tired of the abuse every few years. Hasn't enough been taken from us. Please take another route, leave us in peace with our plans for what is left.

Thank you,

I attended the public forum on May 14th at the Radisson in Green Bay. Upon visiting with multiple ATC personel I was concerned with the complete lack of information available.

As you can see by looking up our address, our residence falls perfectly on the County FF and Sherwood Street transmission main. After concluding three different conversations with ATC Representatives - not one was aware that this road and Hwy 29 intersection is being completely redesigned and rebuilt by the Wisconsin Department of Transportation in 2013-2014. Myself along with all other neighbors are already losing significant land to WDOT right of ways or easements. The addition of another 100+ foot right away would result in significant loss of land value and render it unsellable. This puts my family and I in an unacceptable financial position. A different route will need to addressed, as my wife and I will not entertain any proposals across our residence. Furthermore, please hold a meeting with the WDOT. As I mentioned it was shocking that this large scale construction project was unknown.

Thank you for your time.

Our property lies in Segment A110-2. At this time we already have 1 345KV line that goes across our property. If you were to run a 2nd line to the near side of our existing line with the easement you would be right next to our garage & very near our Back door. Not only do we deal with the line(s) but the easement prevents us from any vegetation but or field & if that were to be expanded we would have no living area.

Comments:

I currently own this property and you have an easement across it for your 345K power line. I'm looking to build a new cabin but concerned that you will seek to widen the existing easement or increase the power about 345 and create an unsafe environment. I travel during the week and making teh meetings is very difficult. I also see by the new mailer that the inserice date for area 2 has been extended until 2017. Can you give me more detail on what your plan is for this area where your existing lines already reside. Can these lines be buried?

Thanks,

Comments:

This area contains many residences that already butt up to the existing power line and have 150 foot easements across the properties. If you were to extend the easement any wider these properties become worthless and the expense to buy the owners out would be very expensive. Several have year round homes that were recently built. Routing the lines around these highly congested areas would make sense.

I own property @ W11400 Meeders Lane Crivitz WI - Town of Stephenson. Current you have a 150 foot easement across my property of .85 acres. If you expand the powerline & require additional easement my property becomes useless. Current I have a mobile home and garage on site & planned to build a retirement home. Any further lose of land and I would expect to be bought out. There would be 5 other homes within one block of my property that are in the same position. An alternative route is the only real answer.

Regards

Mark Schounard

Memo #1

21May12

Your ATC Lines lie 20 steps from my back door. Your poles are on a little tiny berm which is the dividing line between our town homes & the Kwik Trip gas station we get to look daily. If you were to put up more poles, I am guessing it would have to be beside the other poles, which would mean you would then be on my back porch or you would be in the middle of the gas station. As much as I like looking at those brown tall pieces of wood, I don't think I would like to walk around one when I step off the back deck. I'd rather give up electricity for the rest of my life. For my neighbor to the east of me, you would be in her living room; which would be good for her as she presently has nothing to complain about. Thank you & have a nice day.
P.S. I have a lot more to say to you.

Memo #2

5-30-12

Please, Please, Please, Take the future posts & lines & follow US Hwy 41 North. This makes the most sense; It will also irritate the least number of people.
At the present time, a line already exists behind my house; there really isn't room for another post & more lines.
Please, think of the impact it will have on me & my neighbors with the situation we have already & what adding another post & lines will mean for us healthwise, emotionally as well as financially.
Don't do that to us, please, make a responsible decision.
Thank you
Sharon Sloan
P.S. I would like a response.

1. I own property in Marinette County that already has high lines that cross it. If you require additional right of way from me on this property, you will ruin the value of this property as an investment. The property is on a lake, & the buildable land will be too small to be worth anything. Please put the line some where else.
 2. I also own property in Brown County that has a power line adjacent to it. This is a high density residential area & is not suitable for more power lines.

Gilas Lake Landowners' Association
Town of Beaver
Marinette County
Wisconsin

American Transmission Company
2 Fen Oak Court
Madison, Wisconsin 53791-8614

Gentlemen:

This letter is being written on behalf of about 62 land owners surrounding Gilas Lake in Marinette County. We strongly object to building an additional power line on the west side of the lake.

The area in question is known to be home to eagles and osprey. There are nests of both birds either directly in the area in question or adjacent to it. The power lines would also have to cross a wetland. Gilas Lake is home to loons and other protected species. The natural habitat of these protected species would be disturbed by construction activities and removal of trees in the area. If the proposed power line were built east of the existing line, there would be a cottage directly under the wires. Building east of the existing line would further erode the pristine nature of one of undeveloped areas on the lake.

If you would like to discuss this further, please do not hesitate to call me at 920-434-5364.

Very truly yours,

Karen Will

Comments:

I strongly object to the new highline being placed adjacent to the existing line that goes through Marinette county in the town of Beaver. I already have this line crossing my property and reducing my property values and the usable land that I own. Any additional lines will further reduce my property values and usable land. There are also endangered species and birds such as eagles that are nesting in the area of the proposed new lines. The new lines if placed to the east of the existing lines would come very near to Gilas Lake. The lake is currently very pristine. The approximately 60 landowners around the lake do not want these lines damaging a pristine area of the state

I would like to understand how you will compensate property owners who adjoin property with an easement. I read the propaganda on your website which basically tells me that people are so accustomed to the ugly, mega-sized power lines. Would you accept it and just learn to look past it if one of those lines was just off your backyard?

Substation siting c

Dear Sir: We seem to be in the zone for your new transmission lines. We have 36 acres behind our house and my brother's house to the south. (Joseph Bain) that used to be Bain Bros farm. The fields are bordered by ravines and woods. We have it for sale for a pretty decent price. If transmission lines go thru here our land would be useless. We were hoping to sell this land for our retirement. Also the first plans we saw went rt thru the Oneida reservation. They shut that down rt away. We should be able to do that! We do not want this on our land!!

Subject: ATC's Proposed High Voltage Lines along Hwy 41 corridor

RE: ATC's Bay Lake Project - Proposed Route Along Highway 41

Dear Sir/Madam

Hello!

It has come to our attention that ATC is considering placing High Voltage lines along the highway 41 corridor from DePere through Howard/Suamico.

We ask your company to position the power lines OUTSIDE OF THE THE HIGHWAY 41 CORRIDOR.

Our business is located on the highway 41 corridor and we want ALL high voltage lines to be located elsewhere!

Thank you very much for your help in this matter!

Sincerely,

Nathan DeLorey, D.C.

We farmed for 39 years. Our land is our retirement. We all know you can't save much farming. Now you want to take our retirement away from us. What is this going to do with the price of our land. Who would want to buy it with all the power lines going across it. There is development going on near us. These people who just bought homes are finding out they are going to have these lines going in their backyard. What is all this electricity above our heads going to do with our health. I've already had two different types of cancer. I'm suppose to try to stay healthy. All this electricity, playing games with our brain. There is an elementary school near here. Whats it going to do with their future learning and health. I'm sure its not good playing near those high power electric lines everyday. Meet with these children's parents & get all their input. I know farmers that have these lines on their property and all the problems they had with the health of their animals. The courts where in the favor of the farmers. If it bad for animals why isn't it bad for humans. Why don't you have anything chartered on the Indian Reservation?

I am concerned about this project routing near our home/subdivisions for many reasons. I'm concerned of it's impact on the health and safety of my children. When we chose this location to move to, I was very careful I did not want to live near major power lines because of my children. Another significant concern would be if there was a major storm. Any rain >1" causes some flooding, and we have had flash floods in our street many times. There are many drainage issues in our neighborhood. I'm very concerned about safety risks with possible downed powerlines in an area with so much standing/slow moving storm water. Please consider avoiding our neighborhood when planning which corridors to use. Thank you. Sincerely,
Beth Dolan

Comments:

Thanks for the valuable information that you provided tonight.

I live in area 0200-1 and am concerned that the lines may go through our neighborhood. Looking at the information provided, I believe that the corridor along Hwy 41 is the most logical route. It appears to have less impact on existing residences as routing the lines in another direction.

Our home & additional vacant lot is located within the proposed Project Area 1. We have resided at 1635 Talus Circle for 12 years, along with our children. We vehemently oppose locating transmission lines near our subdivision. The neighborhood has many young families with young children, the potential danger posed to these young people as well as the other residents of our subdivision is hard to quantify. We could request the transmission lines be located in a less populated area to minimize the potential harm to residents. Thank you very much for the opportunity to submit our viewpoint.

Subject: Comments-Bay Lake Project

The corridor between Hwy41S and William-Grant Drive in the Town of Lawrence contains a topographical marker-Ashwaubenon Creek. Ashwaubenon Creek is considered a navigatable waterway. As a navigatable waterway, there can be no permanent structure within 300 feet of it. Migratory birds use the creek as a topographical flight marker. We have lived here approaching 20 years and without fail Tundra Swans, Canadian Geese, Sandhill Cranes fly directly over our home spring and fall, sometimes landing entire flocks in surrounding fields. Finches, Cowbirds, Sparrows and Starlings gather here near the creek sometimes in flocks approaching 1000. Starlings fly in patterns called 'Murmurations'. Murmurations are gathered flight patterns with quick, darting movement resembling a school of fish. All of the birds mentioned are protected by the Migratory Bird Act of 1918. On the website for this act, they list multiple papers concerning 'Tower Kills' referring to electrical towers of the same type as the Bay Lake Project. In the last two years, a nesting pair of Peregrin Falcons have claimed the area in this corridor between Scheuring Road and Little Rapids Road as their territory. They are protected by above mentioned act as well.

It seems clear this corridor of property poses natural/topographical as well as wildlife concerns creating a strong case for discarding it from consideration.

We also have large animal stock(horses) which are at times part of our livelihood. It is also important to consider the healthrisks with this type of project. The change in electromagnetic field must be considered. I believe erecting above/across peoples lifespace creates a higher healthrisk ie: headaches, digestive problems, equilibrium problems and worst case possible contribution to cancer generation.

Thank you for your time and consideration.

We do not want a 345 volt line or transmission tower anywhere near our house or subdivision. It has been proven that living near electric lines & transmission centers cause many more cases of leukemia, cancer & miscarriages!

Put your electric lines & transmission centers some where else please! You cannot endanger our whole community by putting your electric lines here!

These 345 v lines & transmission towers should NOT be placed anywhere near towns or cities especially as large as DePere & Green Bay!

Here are reasons I believe my neighborhood is not a good place for the proposed new power plans and substation:

Although Grant Street, DePere was not on your maps at the open house on May 14, it is a busy street that has several apartment complexes, 2 large condo complexes, each with a substantial pond, a new community of homes behind the multi family complexes, and close proximity to Austin Straubel Airport. This area is in a zone where the planes are already in landing mode as they pass over us.

Therefore, I think our area should not be considered for the proposed plans.

Thank you.

It would seem much cheaper and less intrusive to build a natural gas generation station in the UP where the power is needed. Why can't that be done? I'm not in favor of the destruction & unsightlyness your power lines create to our landscape.

Good morning:

Missed the meeting yesterday so i was hoping you could give me some more detailed information on the route of the lines. Your maps show the lines following hwy 41 through DePere. Would the lines follow along Mid Valley Road or be offset from the road? More specifically we are located at 1438 Crabb Court and are wondering if the lines would follow the road or be offset and be put behind the buildings lining MidValley Road between Scheuring and Grant Street?

Thanks for any information you can share to clarify this issue.

Comments:

Many concerns about the amount of right of way needed and the way it will be left after the project is complete.....some feel the utility that owned the transmission lines were much more lenient to the property owners as far as to what is planted, maintained clearance and it's use.....Public thinks it will be cleared and left cleared after project without planting the proper vegetation for the property.....

Hello,

This is Robert and we are concerned about your BayLake Project.

We did receive information from you about the project including a brochure with a map.

The map, however, is not finely detailed and deals with generalities (i.e. the scale is 1 $\frac{1}{2}$ inches = approximately $\frac{1}{2}$ inch).

We would like to know the following/receive the following:

- A definitive route with actual streets/property lines crossed by your transmission line.
- An artist's rendering/computer generated view of what the project will look like in our area (The Green Bay to Morgan area).

Our address is 1617 Talus Circle, De Pere WI 54115.

Thanks in advance for your time and consideration.

Sincerely,

Robert

We live at 1617 Talus Circle in De Pere, WI. Our property is on one of your proposed sites for this project. The section of our property that is under consideration is a creek and a wooded area. Currently, wildlife, us and our dogs live, observe, and play there. It does not make any sense to add infrastructure to an area of water, wildlife, and woods when so much land is already dedicated to just these kinds of structures. Please do NOT destroy our tiny piece of quiet and freedom. I have enclosed a photo of the area in question. As you can see...this is not a place for electricity! I have also included a picture of our dogs that run and play there. Please take your project somewhere else.
Sincerely, Robert and Susan Mohar

First: Why put a substation area in lower Brown Cty to cover a big northern area - get the substation farther NORTH! ANYWHERE near the town of Lawrence Hwy K - to Hobart (along Red line) would be unwise.

1. Too populated - & people DO NOT want it near their properties
2. 3-4 elementary schools/mid schools within a mile. Any emergencies or emergency with a sub station would cause turmoil in this area.
3. Health/safety of humans & wildlife abundant in area
4. If it is serving northern areas why penalize people in the southern area - people being given the service may accept it more in a more northern arean. Everyone we have consulted with is not happy with the proposed area.
5. Any thought of putting it near Lawrence Industrial Park - Hemlock Creek school WILL deter other businesse from moving to Lawrence.
6. Proposed site would be a entire burden to town of Lawrence with increased trucks, heavy equipment/noise/hazards. The town of Lawrence fire dept., although very good, should not have to deal with the safety issues of the substation & hazards to people (school area), increasing population.

(rest of comment torn off)

Concerns for any electrical/permanent structures on (wooded area/home) Hwy 41 DePere/Town of Laurence area: As an environmental scientist I do believe there is there is a portion of damage - cumulative build up, near electrical structures although many suggest it is safe. There is some harm. Any construction on/near my property would harm a natural wooded setting including rare wildflowers, trees (numerous variety), small game birds, deer, fox etc. *occasionally children/teens walk through the woods area - any structure would be touched or objects possibly thrown at it by some (warning signs don't stop some actions.) The placement of structures would, without a doubt, lessen the property value as this property is valued, in part, because of the quiet, natural setting - away from noise, etc. Viewing an electrical pole/line would bring the value down - buyers would turn down this property as it would be an "eyesore" on a scenic property.

- health issues
- safety issues
- lower property value
- loss of natural habitat & possibly loss of flower species

Dear ATC,

I recently received, & attended the open house regarding the Bay Lake Project. The code # near my home is C280-1. My questions are: Why would a sub-station be built near a residential area with a newly built elementary school? If the major scope of this project is from Green Bay to Morgan, & Ishpeming, MI., why is the infrastructure not located along the right of way of Hwy 41 - 141? Why would a substation be located Southwest of Green Bay, when the problem area lies North of Green Bay?

Thank you,

Dale Wall

The proposed powerline would devastate our home & family if it is put on our property. We have a home business and are licensend as an Adult Family Home providing residential care to adults with cognitive disavilities specializing in autism. We serve families from Brown & Shawano counties. People with autism are extremly sensitive to changes in their environment. We are are currently caring for a young man who is very sensitive to noises. We bought our property because of the yard - it allows people c disabilities to experience nature in a safe, controlled, calm environment. Any construction of powerlines on our road would pose a great safety risk to our residents who do not possess good safety skills. A power line to the west would cover our home while one on the east would destroy the yard area where they spend recreational & exercise time. The noises caused by moisture/temp on the powerlines proposed would be something our residents c autism could not handle not to mention the noises involved c construction. It has taken as a long time to help these people feel comfortable/successful. Please don't take that away from them.

Subject: Proposal of power lines over special needs group home property

My husband Jim and I run a county licensed Special Needs Adult Family Home at 5176 Norway Drive, Pulaski WI. Two of the adults with disabilities that we have living with us and provide care for have autism. They are extremely sensitive to noises and changes in their environment. Things that might not be noticeable to the general population can be devastating to these individuals. We chose this property for its solitude and large yard that provides a safe, calm, and scenic environment for people with special needs who cannot have their needs met by their biological families.

Installing the proposed transmission lines on or adjacent to our property would cause great trauma for our residents. The negative impact would be immense on the quality of the lives of people who already have struggles that most people cannot come close to understanding.

In addition, it would cause our home to be unfit for future care. We currently provide care for individuals from Brown and Shawano counties. This would financially devastate us as this is my primary occupation and we simply could not come close to meeting our mortgage payments with one income.

We cannot express strongly enough how much we are against the transmission lines going on any part of our property or on an adjacent property for the above mentioned reasons. Should someone need to contact us with further questions, our phone is (920)639-6825.

Sincerely, Jennifer and Jim Goltz and family

Message: Dear Governor Walker, We have a traditionally licensed Adult Family Home serving Brown and Shawano County individuals with autism and heightened sensory issues. These people live in our home and are very much a part of our family. We have been working with The American Transmission Company for almost a year submitting info from perspective county case managers and guardians regarding the negative effect of the noise ceated by the lines on the very vulnerable people we serve but have been unsuccessful in getting the route changed. We live near 2 agricultural fields where the lines could be placed but they are choosing to not consider this option. While the individuals who live with us have significant disabilities and challenges, they are thriving and happy. If displaced from their home due to their heightened sensitivity to the humming, crackling, and buzzing noises created by the lines, not only will it cause huge strees to them but will likely result in placement in a corporate Adult Family Home or Community Based Residential Facility which as you know are considerably more costly to the perspective counties and state. We appreciate your support of people with disabilities and of traditional Adult Family Homes. If there is anything your office can do we will certainly be forever grateful.

Subject: Adult Family Home in Project Area 1

Dear David Hovde:

I appreciate the time and information your team provided me with at the May 8th meeting although I was as clearly out of my element as many of you would be if you had in your care adults with significant autism/sensory processing disabilities. As requested, I am in the process of obtaining the studies/reports on autism and hyper sensitivity to noise although it is proving to be much more costly and time consuming than I imagined. I will submit the information as quickly as I am able to compile it. As stated by the case managers for these individuals, the concern is self abusive behavior, aggression towards others, wandering, and altered sleep patterns from the noises made by the lines.

It is my greatest hope that you will consider bumping the lines to the opposite side of our neighbor, Ray Gronski, and running the lines through the 2 agricultural fields adjacent to both our properties. Mr. Gronski is supportive of the lines being moved to the other side of his home which eliminates the need for removing much of his forest area. This would avoid the pole being placed across from our house and the Adult Day Services bus stop and also avoid the line from running the length of our front yard. Routine is extremely important to people with autism- that part of our yard is utilized almost every day of the year as an essential part of their need for movement. Our residents who would be effected by the noise do not have physical disabilities and are not deterred by weather conditions that effect the the lines noise level. Clearly we do not allow them to be outside in dangerous weather conditions, but drizzle and humidity are not among the elements that keep them inside. It is my understanding that the lines will not pose a threat to our son who has a seizure disorder or to the person I am a volunteer guardian for who has down syndrome and a pace maker. Thus, our great concern is the noise emitted from the lines and its effects on people hypersensitive to noise because of autism or other sensory processing disorders.

The individuals who we provide care for are not people who are taking advantage of the system- they did not ask for the challenges that they have. Several of the people we provide or provided care for spent much of their lives in institutions. Some have come from parents who struggled with mental illness or drug addictions. Some have lost their parent or parents at a young age. My husband and I feel it is our moral obligation to make a small difference by providing a loving home to these people who are not able to advocate or independently care for themselves. For various reasons clearly beyond their control, their biological family supports have been compromised. They are wonderful individuals who we are proud to have as part of our family. I appreciate and acknowledge the great challenges in finding the appropriate route for the lines, but I sincerely hope that you and your team take the challenge of finding away to move these lines farther away from our home. To do so would be helping maintain not just a home but a family to some of societies most vulnerable individuals. In not doing so, it would most likely destroy that.

Thank you again for your time.

RE: Baylake Project

To Whom It May Concern:

Please allow this correspondence to represent the community which lives along the proposed substation along Old Hwy 29 in the Town of Pittsfield.

We have many concerns with the location of a substation in this area, from the aesthetics, human health, animal health, safety effects, environmental effects and economic loss of our property values.

We acknowledge that ATC will inform us that none of the above referenced concerns are legitimate. We are respectfully requesting ATC to acknowledge that there are studies which exist which contradict the studies ATC will reference to us. Please take this community's concerns into consideration when choosing the substation location.

Sincerely,

Pittsfield Community

DePere, WI 54115
May 14, 2012

Dear ATC:

My husband, daughter, and I reside along the Mountain Bay Trail in Howard, WI, which is one of your proposed power line routes. (T20-1, T30-1, T35-1)

We are opposed to the transmission lines being sited along these routes due to the following:

1. This is a highly residential area, with a greater number of people/square mile than other routes you are considering.

(Howard, WI, population - 753 people/square mile vs. Brown County ¿ 429 people/square mile; <http://www.wikipedia.org/>)

2. Larger transmission lines would decrease the property values in this highly populated, residential area.

3. While a research of studies online does not prove an increased cancer and other health risk due to living near power lines, there is the perception that living near these lines is less than optimal. Siting the lines here would likely result in significant calls to your company from residents worried about the health risks.

4. The trail is used heavily for recreation, including walking/running, biking, snowmobiling and cross-country skiing and snowshoeing. People use the trail to get to businesses and parks from their homes. This trail runs from Howard to Wausau, WI, and is a year-round trail. Having power lines along it would either negatively disrupt or totally eliminate this popular recreation and alternative transportation option. (The trail helps keep bikers safe off the roads!)

5. Parks along the trail, where soccer, baseball, and other recreational activities occur, would be negatively affected. There are 2 popular, heavily used village parks within 2 miles of our home that are directly on the Mountain Bay Trail. These parks are used every night in the spring/summer and fall for soccer and baseball games and practices, and also for tournaments

Bay Lake Formal Comments - Additional Comments by County/Municipality

with 100's of people attending these events.

6.Potential costs to your company: Having to complete construction in a highly populated residential area would likely increase your costs, due to having to disrupt homeowners' yards and land to get to the trail.

One of the reasons we purchased our current home is due to this trail being our backyard lot line. We have other friends in the neighborhood that feel the same way, and we would hope you strongly consider other routes that would affect the least number of residential homes and people. Our thought is that locating the transmission lines along Highway 41, where there is easier access AND fewer residences per mile, would be a better solution.

Please feel free to call us if you'd like to talk with us directly. We are very concerned about this project, and hope to find a mutually agreeable solution for all involved.

Sincerely,

Tracy Kusik and family

Comments:

Hi, we are looking at purchasing a home on proposed route Segment P120-1. When will you know if this route will be eliminated? How far off of the center line would the towers/line be located? For sure on the centerline, or somewhere in the yellow shading? The home we are looking at is 8373 Serenity Lane, Pulaski, WI 54162. Thank you!

Thank you Kelly, for the update.

I have a friend whose home is also affected by this same route, P120-1. I called her after I emailed your company initially, and she told me she had gotten a postcard mailing from ATC in the past month or two. She thought it stated this particular route was out of consideration, that the Hwy 55 or Hwy 41 routes were most likely.

She threw the postcard away; can you comment if you know anything about this more specifically? Thank you again.

To Whom It May Concern,

I have been told that power lines are proposed to be placed near 5176 Norway Drive, Pulaski, Wi. I'm the father and guardian for Eric Ladowski who lives at this residence. I've been told that there are possible noises that can be heard from these lines. My son has a problem with some noises. For example he puts his fingers in his ears and make sounds so he can't hear sounds like baby cries, some peoples voices, and sounds in a school bus. Sometimes noise muffs help but you can't count on it. When eric was younger my wife Joan and I would be laying in bed at night talking. Whenever we would talk about him he'd start laughing and his bedroom was at the other end of the house. We weren't talking loud and his laugh would be heard on the monitor. I don't know if the lines would bother him but once the lines are in you can't move them. So the Adult Family Home would have to move or I would have to place him in another home. You don't know how hard it is to find a place that fits the client. Thank you for your time and ear.

A concerned father and guardian

Mark Ladowski

Subject: hazardous to health-proven

We cannot afford health-wise to live under or near a power line. In addition, we purposely refrained from purchasing a piece of property that we loved due to it being next to a power line, when we built our home six years ago.

Health Risks are too many- please do no place this near our Matuszak Crt, Green Bay, WI home.

Comments:

We built our home in 2006 on 5 acres of property on a court that has all utilities buried underground, this was one of the reasons we chose this area.

When looking at property in 2006 we looked at a nice piece of property but it had a transmissin line cutting across the property. Needless to say it was the only lot left on the court so it is obvious that people do not line transmission lines on their property.

I will do whatever I can to keep this proposed transmission line from crossing my property or anywhere close to it. I'm sure your company is aware what this would do to the value of my home/property. I'm totally against it, please find an alternate path.

Respectfully submitted
Bart Lubinski

RE: Baylake Project

To Whom It May Concern:

Please allow this correspondence to represent the community which lives along the proposed substation along Old Hwy 29 in the Town of Pittsfield.

We have many concerns with the location of a substation in this area, from the aesthetics, human health, animal health, safety effects, environmental effects and economic loss of our property values.

We acknowledge that ATC will inform us that none of the above referenced concerns are legitimate. We are respectfully requesting ATC to acknowledge that there are studies which exist which contradict the studies ATC will reference to us. Please take this community's concerns into consideration when choosing the substation location.

Sincerely,

Pittsfield Community

THE P100-1 CORRIDOR WHICH IS PROPOSED TO GO THROUGH OUR PROPERTY WOULD HAVE TO GO THROUGH 40+ ACRES OF WETLAND (OUR NORTH 40), AND WE WOULD PREFER NOT TO HAVE THAT LAND DISTURBED. FURTHERMORE, WE ONLY HAVE 30 ACRES OF OPEN FARMLAND (OUR SOUTH 40), AND CAN NOT AFFORD TO HAVE ANY MORE LAND TAKEN OUT OF PRODUCTION FOR THE P100-1 RIGHT OF WAY. THERE ARE ALSO WETLANDS AND RAVINES TO THE SOUTH AND NORTH OF OUR PROPERTY. WE ARE ACTIVELY FARMING OUR LAND, AS ARE THE FARMERS TO THE SOUTH AND NORTH OF US.

WE WOULD NOT BE IN FAVOR OF AN EASEMENT FROM BRIAR DRIVE FOR THE MAINTENANCE OF P100-1. THIS WOULD IN EFFECT CONNECT BRIAR DRIVE TO POTTER'S CREEK SUB-DIVISION, THUS RESULTING IN MORE THAN THE 3 CARS GOING PAST OUR FARM ON A DAILY BASIS. BESIDES WE DON'T CONDONE THEIR SPEEDING AND THROWING OUT WHATEVER THEY DON'T WANT. OUR FORMER TOWN CHAIRMAN HAS ALREADY LOST HER JOB OVER HER TELLING THE SUB-DIVISION OWNER THAT BRIAR DRIVE WOULD MOST CERTAINLY GO THROUGH. THEY FAILED TO REALIZE WE COULD BE EXTREMELY STRONG TEA WHEN PLACED IN HOT WATER! WE HAVE A PETITION SIGNED BY EVERYONE ON BRIAR DRIVE THAT THIS WILL NOT HAPPEN.

WE DON'T WANT PUBLIC TRESPASS ON THE POTENTIAL P100-1 CORRIDOR THAT WOULD CROSS OUR PROPERTY, ALONG WITH ALL THEIR GARBAGE. JUST HOW DO YOU SUGGEST WE STOP THOSE SELF-ABSORBED PEOPLE?

AS FOR THE EFFECTS OF ELECTRIC AND MAGNETIC FIELDS, WE COULD NO LONGER GRAZE OUR HORSES AND STEERS IN THE OPEN FIELD WHERE P100-1 IS BEING PROPOSED, AS CERTAIN FARMERS IN THE AREA CAN ATTEST TO BEING AFFECTED ADVERSELY BY IT.

LOOKING AT THE PROPOSED ROUTES SHOWN ON YOUR MAP, FOLLOWING HIGHWAY 41, WHERE THE CORRIDORS ALREADY EXIST, WOULD MAKE MUCH MORE SENSE FROM THE ECONOMICAL, ENVIRONMENTAL, AND LANDOWNER ASPECTS.

WOULD YOU PLEASE CONSIDER A ROUTE RATHER THAN P100-1.

THANKS YOU.

Subject: land Owners

Hello, We were unable to attend the May meeting on the proposed project area 1 (Green Bay to Morgan). We own property at 4008 Hazelwood dr in Pittsfield. We would like it known that we are in strong opposition to the project line coming right across our property or the vicinity. We are a young family and built our home on my family's homestead, with the intent of staying at our current address for the duration. We are raising three young boys and are concerned on the voltage aspects, the land value aspects, the disruption to the wildlife and wetlands not to mention the sheer beauty of why we moved to the country. I hope you will reconsider the placement of the power lines. I hope you will notify us in advance on the next meeting which I believe is to be in OCT. So that we may adjust our work schedules to attend. We appreciate the power project being a valuable part of our society just hoping there will be a viable solution.

thank you

Nora and Dan Scray

Property is Along Segment U60-2
PAGE AJ10

WHEN IS Enough - Enough? FIRST THEY TAKE LAND FOR THE NEW Highway - not only along the side of our farm - but frontage as well.

This is personal property --- the farm we grew up on. We do not farm it, we are not big business using the land to make money. We only want to preserve the land we grew up on. We would like to preserve it for our Kids AND their Kids to BE ABLE TO USE IN THE FUTURE.

My father lived 91 years on this land. I'm glad he didn't live long enough to see this decimation of his land in the name of "progress."

In 2011 we purchased 105 acres of farmland in the town of Pittsfield, Brown County and built a new homw and constructed farm building on this land at a cost of over a million dollars.

This past April we were notified that this land might be considered for a possible new powerline and substation.

We did not go through all this expense and work to permit a new powerline to go through this property! Everyone knows a powerline like the one described in your letter would deeply depreciate the value of your land, make nice farm fields difficult to work, and cause health problems associated with the magnetic field caused by this powerline.

We oppose this powerline in our area and strongly advise you to put it else-ware.

Subject: Bay Lake Project Comments

Hi!

I would like to comment on a proposed path of the Baylake project.

As a partner in a farm operation that is within the proposed area of the Bay lake project, I would like to express my sincere DISAPPROVAL of the proposed route that would include my property. My reasoning is simply this. We just purchased this farm and if the project would go through, the impact on the value of the land would be severely reduced. What is my reasoning? First hand experience. We had looked at properties before purchasing this one that actually had hi-power lines running through them and the values of those properties were substantially less than what we paid for this property. And the hi-power lines on these properties were the determining factor of whether to purchase or not.

I fully understand that this project and others like them all over the nation come at the expense of "progress." I also understand the acronym N.I.M.B.Y. (Not In My Back Yard). The point that I am trying to make, is that claiming "eminent domain" is NOT fair to any of the landowners involved. Furthermore, paying "fair market value" for something does NOT necessarily mean it is for sale (even at a much higher price).

I sure hope this project is planned in the best way to minimize environmental damage and to provide as little public upheave! as possible.

Thank you!

Located in P100-1

Proposed route would include majority of a subdivision newly established. These are brand new homes. If located along side in open field would greatly decrease our homes value. Also the possible future growth to area would be greatly altered. Feel major Hwy or current route path would have least amount of impact to property owners. I moved to the country to get away from the industrial "city feel" never would thought 345 KV line could soon run next to property and greatly reduce value & feel of home/country living. Please keep these thought & feeling in consideration when making a decision.

I have reviewed a number of alternative corridors you have in Brown County. I see that some of your proposals are following local roads.

I would like to see you follow current high voltage corridors and stay off local roads. As you know there is a railroad corridor through Brown County that is being used as a rec trail. That would be a legitimate corridor to follow as well.

It is very hard for us to tell from your interactive map whether or not this project is going to involve our property. Our address is 4920 Sandburr Trail, it appears that the project will run along Hwy J (Lakeview Dr). Our property does not go up to J, just can't tell how far our way this is projected to come. Can you please give us specifics on this? Also, if it does currently involve our property what are our rights as far as contesting it? For various reasons, we are vehemently opposed to this coming across our property.

In regards to 64451 - A840-1 Line. I do not want another power line going across my property.

1. Its is not wise to put another line next to the exsisting line, if bad weather takes out both linse, you will loose all power on both lines, so the new line should run through a different site to prevent this.

2. It will take up too much easment space to which I can not sell, It affects my future retirement.

Hansen Farms - in section A830-1 on your maps

We do not want to see these anywhere on our property or my mother Edna Hansen's property. The towers now running by our farm look awful. We are afraid our property value would go down and the land would be even more undesirable with a second set of towers. We still farm these fields and additional towers would further diminish the fields. This is our livelihood and our retirement income for the near future. We are also concered about the health hazards more voltage and electromagnetic fields might do to us, my mother, our children and our grandchildren.

* Picture enclosed of current ATC transmission tower

I was thinking and the best way to show anyone why we don't want another pole and transmission line is because this is what we see in our backyard. We were told at the ATC informational meeting that it is possible ATC might put the new pole between our backyard and this current pole which means we would have another one even closer than this. First of all our backyard would look terrible if an additional pole was installed and that is alot of voltage in our backyard. I worry for my families health. Please, please don't put the new lines in our backyard again, we already have to have the ones shown in the picture.

Thank you,
Jen Hansen

Subject: ATC route

Hi,

Can you tell me if our area (our address is 4043 Lakeview Drive, Suamico) has been eliminated as a potential spot for new ATC transmission lines? We currently have lines in our backyard and a set a railroad tracks behind existing lines.

Thanks,

Karl and Jennifer Hansen

Please do not add more towers or lines along the current ATC lines located behind our home. Everyday we have to wake up and look at one set please don't make us have to look at more. We worry about the health effects on our family. We are also concerned what more towers will do to our property value.

We trust ATC is going to carry out this project with keeping the environment in mind. Our sons and ourselves are involved in Cub & Boy scouts. If there are any projects that our boys could ever be involved with, please let us know. Also, if ATC would like to make a donation to our pack (4063), we would be most grateful.

Please see attached document and maps.

My husband and I purchased the open field just south of our home 3 years ago. The two parcels are contiguous. It has taken us three years to finally rezone the land from Rural Residential to Exclusive AG. - which just happened in May of this year.

With that, we have made plans for a dairy and beef operation and have just begun to move forward with those plans. We are working with WPS on a rewiring grant for our farm buildings in order to put in lights, fences, water pump, etc... We are very concerned about the effects of overhead power lines on our future herds. The plans for our operation will be foiled if these power lines go over our land and after all this time of FINALLY being able to get the business underway with the recent rezone of our property. You will find if you research the Village of Suamico that most dairy farms have gone out of business, but we are just starting up. Our plans include an artisan raw dairy milk/cheese operation and we have recently joined a grass roots organization that is lobbying our state legislators to allow the sale of raw milk and raw milk products.

Also, we know (as a result of research) that ATC does their best to avoid wetlands, especially wooded wetlands because of your clear cutting requirements. The entire north end of our property (nearly 26 acres) is comprised of DNR designated ESA - wooded wetlands. Clear cutting the north side of our land to put power lines through our open field would cause great harm to the environment. There are plenty of open lands that are not wetlands in which to site the new lines. Please see the attached map for the location of the wetlands, our home, the farm buildings and our herd's pastureland.

Our hope would be that you site the new power lines in an area where you are not clear cutting DNR designated ESA wooded wetlands and would not go over our farm where we are just beginning to get underway with our dairy and beef herds. If you look at the DNR maps, you will find there are a lot of open cash cropped land where ESA's are not present and the impact on a family's livelihood and pristine wooded wetlands will not be compromised.

Thank you in advance for your consideration.

I heard on the news that this project may be scrapped due to the upcoming closing of the nuclear power plant - which I hope is true. If it is not scrapped, let me reiterate concerns I have on additional lines following the RR tracks at County Trunk J. There are numerous homes to the west of "J" on Norfield Road. Power lines like these would be better suited to open farm land with fewer homes as is the case to the west of County Trunk J where you already have power lines. Plus, the properties to the immediate west of the RR tracks at J & Norfield are full of wetlands - not the case on the east side of County Trunk J.

Thank you!

I don't want the transmission line to go down Velp Ave near my house! I would rather see it go along the track (railroad) where it is now.

I also have property in Marinette Co. Town of Stephenson. I bought the Ambrosius Trust home. I was told it might go north of X. I think I would be okay with that.

I also own about 6 acres near Caldern Falls. I'm not sure about that yet.

First of all, thank you for including the Excanaba & Lake Superior Railroad (ELS) on your mailing list. As you know, ELS right-of-way and potential corridors in the Bay Lake Project seem to overlap in many areas north of Green Bay. I am interested in learning whether ATC and ELS have some mutual benefits to be derived from working together as the your planning continues. Please keep me informed. Thank you.

Subject: Bay Lake Project - Potential Corridors

I wasn't able to attend your May 14th open house. Can you give me a time frame when your project will have narrowed its potential corridor options for this project, or eliminated corridor options. I live at 1344 Transfer Trail in Suamico and, as best I can tell, one corridor would be traveling along County J somewhere from Sunset Beach Road to Little Suamico.

Comments:

I want to thank David Hovde for the information regarding the proposed power line construction near our cabin at W9306 Provencher Rd, Niagara, WI 54313. I was very concerned about the positioning of the proposed power lines in this area because we have a beautiful cabin here along the Pem Won Bon River. Dave was very helpful with showing me how to find the interactive map on your web site as well as explaining to me about the proposed corridors for these power lines. My concern lies in the possibility of the lines running through our property and that it may effect our quality of life there as well as the property values should we ever need to sell our cabin. The area is absolutely beautiful, filled with wildlife and very quiet and peaceful. It also has the added attraction of a beautiful trout stream that runs through our 20 acres. We spend most of our summers here and plan on retireing here in the near future. Should a power line run through this property, the runoff from the construction as well as any deforestation could harm the natural balance that makes this trout stream one of the best in the area. Not to mention the devaluation of our property which we purchased because of this beautiful trout stream. At this location the PemWonBon River runs within aprox.100 feet from Provencher road. I would hope that you will consider the possible negative effects that this proposed power line will have on this beautiful trout stream and on the properties that have this stream running though it. Thank you for this consideration and if you have any questions or would like to view the area personally, please feel free to contact me at 920-662-0606. Thank you! Mary & Charles Miller

I guess I don't understand why my property, along with my neighbors, it still under consideration for this. Many large mature trees would need to be logged out at great expense. There is plenty of already cleared land that is adjacent to existing high voltage towers that would be considerably cheaper to use I would think.

Ref: Bay Lake Project -

Comments regarding the proposed single circuit transmission line from a location west of Powers MI to Escanaba MI.

After reviewing the five possible route alternatives for the above transmission line, it appears that the best route is the one following the abandoned railroad right-of-way for the following reasons -

1 - this route is one of the shortest of the five possible routes.

2 - the "railroad bed" provides a prebuilt road for easy access for the construction and maintenance of the proposed line.

3 - most of this route is located in areas that are not close to residences or business as would be the ease for the route along US 2 & 41.

4 - Since this route is one of the shortest of those proposed, and the fact that a "roadway" is already on place, it would appear that it would be

2 of 2

one of the least expensive to build and maintain.

5 - Building a line on an existing right - of - way with a "road way" in is place would result in less impact on the environment.

6 - For a minimal addition cost, an ATV / Snowmobile trail could be provided on the route which would benefit the tourism industry of the area.

In conclusion, the building of a transmission line on any route will have some negative impact on various aspects of the adjacent area. However, the utilizing the abandoned railroad R.O.W will result in the least overall impact of the five proposed routes.

4 - Since this route is one of the shortest of those proposed, and the fact that a "roadway" is already on place, it would appear that it would be

2 of 2

one of the least expensive to build and maintain.

5 - Building a line on an existing right - of - way with a "road way" in is place would result in less impact on the environment.

6 - For a minimal addition cost, an ATV / Snowmobile trail could be provided on the route which would benefit the tourism industry of the area.

In conclusion, the building of a transmission line on any route will have some negative impact on various aspects of the adjacent area. However, the utilizing the abandoned railroad R.O.W will result in the least overall impact of the five proposed routes.

Subject: Bay lake project

Hello,

I have unfortunately missed the open houses that have been provided for public comment. I am a home owner/landowner in very close proximity to where I have been told the new lines will be routed. I understand the need to build these lines and I am concerned about their placement. My home is on a dead end street. I am told that the lines will be running immediately adjacent to the railroad tracks which are a stones' throw from my property. Has it been taken into consideration to move the lines further away from residential neighborhoods? As i'm sure you are aware, there has been research done to correlate the increase risk of cancers with close proximity (increases drastically within 600 meters) to these power structures. I am curious on what has been taken into consideration on this regard.

I'm also concerned about property values decreasing.

Do you plan on having more open houses for the public?

Thank you,
Angela Kulak

ATC Bay Lake Project
5303 Fen Oak Dr
Madison, WI 53791-8601

Dear ATC representative:

This letter is in regard to the proposed placement of a high voltage power line by your company ATC (American Transmission Company) along the old railroad route that runs from Hermansville to Escanaba, the ATC Bay Lakes Project proposed route. As you know, the Michigan DNR is proposing a multi-use/ORV trail along this same route.

This abandoned railway runs in close proximity to many homes. There are a number of houses along this grade with small children. The combined blow of putting a large power line near these houses with an ATV/ multi- use trail is devastating and dangerous. The main concern is the safety of these children from threats such as fast moving ATVs, dust, and EMFs (electromagnetic fields created by powerlines). According to the World Health Organization's International Agency For Research On Cancer monograph from March of 2002 extremely low-frequency magnetic fields are possibly carcinogenic to humans. This is based on a two fold increase in relative risk of children living near power lines developing childhood leukemia. The health risks of combining the dust of ORV use and dust with EMF are concerning.

Please note that I do not support the ATC Bay Lakes project proposed route from Powers to Escanaba, or the development of the railway by the Michigan DNR as an ORV/ multiuse trail.

Sincerely,

John R Charles

P.S. By the way the stakes are laid out, it looks like the power line will be right over my living room! (and kitchen) 906-466-0026

We are a small club in the Escanaba - Gladstone area and are trying to expand our trail to the North. I am wondering if your power lines are owned by you or leased. I should say property they are crossing.

We would like to be able to travel some of these power lines to get to the Northern part of the U.P. to increase recreation in the area.

Any help would be appreciated.

Thank you

I was not able attend the info sessions that you held in the U.P.

Looking at your maps, it appears that your proposed line will go down my driveway at 37624 CR 426 in Marquette County. It appears, on the map that your route follows the old rail road grade which is also my driveway and right next to our house.

If possible could you direct me to a more detailed topographical or aerial map of the actual route so that we can put our mind at ease that our home will not actually end up under a high voltage line?

Thank you in advance for any help that you may give.

Sincerely,

Jim Lavigne

Sirs: I did not think this card space would voice my concerns so please find attached Four (4) pages of my concerns, At my age 88, would concerns effect me For the past near 30 years these right of ways have produced nothing directly to me and will not in my lifetime or for the remainder of life of the power lines However we have grandchildren who will be effected as long as the lines exist. I am not comfortable passing on such to them without due cause. Please read my lengthy attached pages and file for your consideration. Note I do offer another solution to eliminate us.

Thank You Richard Bauer

Phone 906-246-3397

Dear Sirs:

I am assuming you are pertaining to our properties located in Breen Township as follows T41N - R27W - NW 1/4 & NE 1/4 (or N 1/2) of SW 1/4 Section 12 I also assume reference is to E 1/4 beginning at the center of section 12, South 1/4 mile Thence 1/2 mile West along the South border to approx. Sect 11 (3/4 mile total) The Center Sec 12 - 1/2 mile West Menominee County and approx. 1 1/2 or 2 mile South Marquette County.

So I start at the Center of Section 12. As you know there are two transmission lines along side each other the first one built in early 1980s by Cliffs Elect or CCI which centers on the center of Section 12 thence 1/4 mile south where the three poles of the corner structure are inside the Southeast corner of that marker. Then west and some south exiting us in its route to the west However the larger Transmission built by W.E. energies with the steel corner structures which was North & West along the route of the earlier line took competely its width along our property. I am concerned as to area along the south side of our property running E to W as follows (over)

Page II

For much of the route along the south of our property is a stand of timber that is at least one hundred years old. even if only part of this is altered such as cutting to accomodate additional right of way. Experience has taught me (because of the ground conditions) the rest will eventually blow down. In which case the balance of the adjacent property would have very little economic value to me which I can little afford.

If your plans include an additional transmission line South & east of the present existing ones - Then it would be not much consern of mine. To me this would seem less greif as where it crosses M-69 (sec 14?) would be further from several Homes located near there as you get into the section 12 area - one person to deal with, with much of it logged in recent years. As you get closer to the Menominee County line - mostly Hunters & (Mead Country) mostly logged heavy recent. When you get West of Dickinson - Menominee County line it is in this area it gets closer to somebodies yard.

As I look at your maps I ask why not the route along the M-95 which passes the Lous, Pacific plant at Sagola and just east Channing - Two area with more use potential or route from Plains north to East of Groveland Mine & East of N Dickinson School and routed much within The Copper Country State Forest

Pag 3.

American Transmission

Besides the two 41 lines in sec 12 We have 10 easements with WE Energies on our properties with lesser voltage only two of these directly benefit us. So I believe we have done our part to Keep the lights on

We have a good relationship with WE Energies so do not complain about 2500.00 Annual cost of this Energy. Power did not come to the Fordville till 1948 so I know what it was to be without it the 16 years before.

We have owned the property since 1946. when purchased it along with other property or 65+ years ago when I returned home from WWII. I was not here when the state sold off the property to private. I was on some remote island in the South Pacific. I was 19 when arrived on Guadalcanal on Aug 1, 1943 then to another strange Island in the Northern Solomons then the Philippines and on to the occupation of Japan. Base pay 50.00 month, less insurance I arrived home Jan 1946 with Discharge & muster out pay. Within next year I purchased 80 acres in Section 11 and the 80 acres in section 12 (The property concerned) with borrowed funds paid back along with interest as well as taxes paid on property for past 65 years. Nobody gave me this. It was not a hand me down. I include these comments as I was only 22 years old at such time (Tho I mention the time spent in the military I do not regret it tho it was in adverse times, would do much again if need be)

(over)

Page 4

As I am well into my 88 years I really don't think I have short changed any one during these years gone past.

As I mentioned a relationship with WE Energy I can no say we were left with the same with Cliffs with the construction of the first line, which left us with with some bad taste. Tho WE Energy corrected some of the "sins" left by Cliffs. They could not fully correct all of the negatives left over from the original line. I would hope that your organization has procedures more in line with WE Energies rather than Cliffs. That you ask for input such as this is a plus.

Agan property with your inclosed project map where Menominee Co & Marquette Co meet along the E line af Dickinson Co about 2 mile South of marker # A320-3 South of Center of Sec 12 1/4 mile then West 1/2 mile.

If your project follows South and East of present two H. Voltage lines and would not require any additional property on my part. Then my concerns would also be minimal. The properties N-E & South of us belong to Steve Sanderson by taking South & East of present lines you all but eliminate us. It appears your project is still at the beginning plan stage. I all respect Please advise me as you move along routing plan. I would appreciate such.

Sincerely

Richard Bauer

As a father of three and an avid outdoorsman I strongly oppose the addition of any new power lines in the Upper Peninsula of Michigan. The jobs created and existing for our self-production of energy are crucial to our local employment, both now and future. Additional connection to out-of-state energy leaves us dependent on jobs that have no help to our local employment needs. As a landowner with current powerline easement, I want NO MORE LINES added to my property. We need to employ alternative energy production to fill any need issue or void in local supply. NO MORE U.P. POWERLINES!!

In regards to the potential route A-105-3 for the KV345 line from Quinnesec plains to Ishpeming. If you would use this route, it would not effect my property if put to the north side of the existing 345 & 138 lines. If it was put on the south side of these lines it would bring the line less than 100 feet from my recreational cabin. Being that close concerns me off the high voltage power that travels through those lines and the static electricity present.

(1) We have a concern re: line coming town road in front of our home. We don't want that if possible.

(2) Cell tower on property - will this be a problem/concern? We don't want our lease affected negatively.

(3) Tree farm on property - with up keep of power lines - etc. Trees are of market size & do not want to lose revenue. They've been growing ~ 15 - 20 years to reach maturity.

(4) gravel potential on property - need to assure future access to all potential gravel if power line is placed near here.

Thank you.

We understand the need to improve electrical services So we hope you will understand when we voice concern over the proposed Route of Project A120-3 where we have Farm Land and a pine tree plantation. This is an active Farm providing 3 Families with their sole source of income. We worked extremely hard to clear these fields to accomodate the large Farm equipment we use. Also we irrigate these fields and overhead power lines are dangerous as water sprayed on them cause a dead short which could endanger lives. Our pine plantation is just getting to the point of harvest and would not want that taken from us. Will be awaiting more information as you NARROW down your choices.

Subject: Fw: Comment on Bay Lake Project Project Area 3

I was doing some math. A forty is 1440 ft wide. The existing easement for two power lines is approx 250 feet now, if we add another 100 ft for the 345v, it will be 350feet wide. The current easement

cuts at an angle across our forty, not along the property line. This angle makes the easements impact even larger. This land is for timber and hunting. The combining of these three lines results in a loss of utility of 25% of our land.

Please do not chose this eastern most option in Project area 3, as this smaller parcel will be greatly impacted by loss of utility of the land.

Thank you.

Subject: Comment on Bay Lake Project Project Area 3

To Whom this concerns:

We are landowners in the Project Area 3 Quinnesec to National. My name is Mark Wentzel (Kirsten spouse).

The Eastern most potential route for this project cuts across our property. We are deeply concerned about adding a THIRD power-line to this potential route.

A three powerline easement? You must be joking. As there are already two power lines on this route with what is already a huge easement. Have you ever seen a triple powerline??? I have not. I seldom ever see two powerlines put in the same easement. It is already a huge easement. If that route is chosen, that is a ridiculously HUGE easement. It will cut our forty acres into two small pieces and drastically impact the value of this property, much more then just the land for the easement. It will really make our forty a joke.

Please do not consider this eastern most option.

Please acknowledge receipt of this comment.

Thank you

Comments:

My husband and I live at the end of E. Hoadley St. where we have been raising our family and are now raising a nearly 2-year old granddaughter. We enjoy the nearly 10 acres on which our home is situated and have appreciated blackberry, blueberry, and raspberry bushes as well as wildlife and the beauty of the trees that are all located just beyond our property. Just over a week ago people and machinery began removing much of this beautiful area. We were only recently made aware of this project and were unable to attend the open house that was held at Pine Mountain Resort. We are wondering what effect this project may have on our property and our home. Thank you for taking the time to consider our concern. ~ Sincerely, Tracy Alsteen

Reference is made to your Segment I.D N-500 property owned by Don & Roxanne Anderson. Line ref. numbers would be A-30-3 and A80-3 that dissect our property.

Our property is adjacent to Fumee Lake Natural Area so we have strong concerns for the wild animals, birds (Bald Eagles, Loons & song birds) and floral-rare orchids. Adding another line near this beautiful Natural Area would seriously impact the environment. We would strongly recommend another route for your new powerline

Our suggestion would be to give deep consideration to run your new line side by side with line A430-3 from the Quinnesec Substation eastward toward Norway then North.

One other factor to consider is the extreme rocky area on our property near line A30-3.

Respectfully,

Don H. Anderson

I would like to strongly recommend that the Bay Lake transmission line following the existing A430-3 line for the following reasons;

(1) A30-3 and A80-3 already go through Lake Fumee Natural Area. I do not want to see more disruption of that beautiful natural area.

(2) A30-3 and A80-3 already go through the Anderson properties - Donald and Kevin. I understand the need to upgrade the lines, but our properties are already bearing more than its fair share of lines cutting through it. Thank you for your consideration.

I do know that obtaining enough power is important but to have such big power lines so near my home with the dangers of EMFs healthwise is not something I find acceptable. I lived under huge square powerlines in Alabama & was relieved to leave but we couldn't sell our home because of those power lines. I don't want to live near them again.

Property located at: N3008 Fumee Lake Dr., Iron Mountain, MI A30-3 M50-3

I would hope you can find an alternative route for the transmission line rather than going through the Fumee Lake Nature Preserve. The possible route on the southwest side of the nature preserve would parallel a hiking trail for about a mile & would have a negative impact on the Fumee Lake Subdivision with about 30 homes. The nature preserve does not allow motorized boats or fishing in its two lakes. It has about 25 miles of hiking trails with groomed trail in the winter for cross country skiing. This route would destroy thousands of trees & scar the nature preserve in a major way.

Re: Transmission Lines

Dear Mr. Hovde:

I am in receipt of your September 2012 letter (attached), as your letter states, "our records indicate that property you own is on one of the preliminary routes" for new transmission lines. Unfortunately, I will not be able to attend the October 3, 2012 Open House in Harris, Michigan. As the owner of subject property (802 State Street), clearly my first concern is the placement of these transmission lines and the affect they might have on its value. Second, is there any environmental impact or degradation to the property? Last, what mechanism are you proposing for property use compensation?

I look forward to your response in the near term. I can be reached at (401-456-0900).

Sincerely yours,
(signed)

To whom it may concern:

Since 1975 when we first purchased property in Dickinson County, Michigan, we have endeavored to maintain as much as possible as a wild life refuge by keeping the woodlot in tact as far as possible. It has been with great sadness that we have witnessed logging operations on neighbors' properties and on the easement abutting them which parallels the west side of our land. The strip of trees separating our year round house from the easement provides a natural buffer between it and our residence. Under no circumstances do we wish to lose those trees.

Between our private road that runs north/south on the western edge of our property and the easement are underground electric, telephone and cable lines. Construction on the east side of the easement (i.e., near the west side of our properties) would cut off our access road and disrupt current electrical, cable and telephone service. Moreover, on the current easement lies an underground gas pipeline in addition to the overhead electrical towers. Any additional construction on that easement runs the risk of damage to that pipeline, thereby endangering the residents on both sides, especially those like us who must cross the easement every time they approach our property. We regard this as a distinct safety risk.

For these and other reasons we are opposed to ATC's possible placement of electrical towers for the Bay Lake Transmission Project on or near the extant easement abutting our property. Furthermore, we are highly opposed to granting any additional easement on our property. Please consider this letter our formal objection.

Sincerely,

Janice F. Byrne/Trustee

RE: Bay Lake Project

To Whom It May Concern:

My name is William Calcari. In 1930, my father bought property that consisted of two forty acre plots and started a farm. I was born in the family home on that property that still remains on N4984 Hwy. M-95 located in Iron Mountain, MI. It has become apparent from your letter, that clear cutting on my property is again an issue.

In the past, the highway right-of-way claimed almost three acres along the western line of the property. On the north line (two forties deep), an ownership right-of-way claimed an acre and a half for the adjoining forties which is east of our land. After that, the current power lines were proposed and constructed which resulted in the reduction of over four acres along the east line. The Mich-Con Gas Company (now DTE Energy) came through with new gas lines on the same right-of-way as the power company had previously done, and did so without my permission and consent.

Presently, American Transmission is proposing the Bay Lake Project, which will mean yet another acreage loss (four or more acres) to construct a larger power line through our property.

This loss of land is devastating to me due to many reasons that go all the way back to my childhood years. To list them all might seem meaningless to your Company, but to me they are priceless in my life. I have enjoyed all the surrounding beauty of the trees, woodland growth and the nature they provide every time I'm on my farm. The destruction of these things just does not seem right to me. Not to mention, this process will obviously make things more difficult for me to continue to cultivate or sell my land, if so desired.

In conclusion, I sincerely hope that your Company will consider the possibility of relocating the path of the new power lines other than to run through our property. I would also be happy to consult with your Company if necessary, to save what I love.

We recently purchased this property with thoughts of developing it someday being on US Hwy 2 where M95 goes north i.e. The intersection of two main highways.

There is a natural pine forest near the Railroad and commercial bldgs on the east side of the property.

Hopefully well know soon if we will even be affected.

We are writing to inform you of our concerns regarding the possibility of new electric transmission lines crossing over our property. We are a Religious Community of 22 Cloistered Nuns residing at the Monastery of the Holy Cross located at the junction of US Hwy 2 and M 95 just beyond the Iron Mountain city limits. It is truly imperative for our life as Cloistered Religious Women that the silence and solitude of our Monastery and grounds be safeguarded. Thus it is of utmost importance and grave necessity that the cloistered area closed in by fencing and a back woods area never be freely open to service men or any other public utilities and likewise any enterprise disrupting the privacy and solitude of the enclosure of the Monastery. The document, Verbi Sponsa, on enclosure promulgated by the Vatican in 1999 makes this clear: "The law of enclosure entails a grave obligation of conscience both for the nuns and for outsiders." 14-3c We plead with you to honor our request and thank you for your kind consideration.

Sincerely in Christ,

Mother Maria of Jesus, OCD Prioress and Community

P.S. There are also real health concerns resulting from long term proximity to these lines.

I own a 40 acre parcel in Wells Twp (sec20 T42N R26W 40 A NW 1/4 of SW 1/4). I purchased this property to enjoy the outdoors. I am an avid hunter and love the solitude this property offers. I have a cabin on this land where I spend many days yearly. I soon will be retiring and plan to spend even more time there. I also cut all my firewood for the cabin as well as my home from this land. I currently have 2 transmission lines going through this property! This acreage is of little value as no timber can be grown now or in the future for firewood or for timber sale. It is basically barren land. I truly feel a 3rd line would decimate what is left of my land!! I understand the need for adequate power supply but as a private land owner I feel I have already sacrificed enough of my land with the 2 current lines! I urge you to consider a route that would bypass my property!

Thank You!!

I own Maple Leaf Kennels, Inc. (SEGMENT A780-2) My future plans are to sell some of my property for gravel, There is currently a gravel pit adjoining my property that could eventually be continued onto my property. Moving the current electric line away from my building could be a hardship for you - going into some swamp land in the Northland Beagle Club. Would you consider going through Midwest Gravel/Charter Twp. Breitung and Lakes Gas Co. To Breitung Cutoff Rd.? It is all open land and would be on the property line.

There are currently easements for both a powerline (69 kV) & railroad track through our property. We do not want an additional powerline to run through our property that would require an additional easement and further limit our plans to plant Christmas trees. We would prefer the new powerline be run on a different route vs losing more acreage.

Subject: Bay Lake Project

My property is one on the potential corridor for the project. It also has a high pressure gas pipeline running through it. How safe is it to have the two utilities running together? In sighting towers do you try to be considerate of property owners viewshed? If the route through my place is chosen it would be nice to not have a tower right in the middle of my view of the valley. What about structure that exists in what would become what is the easement?
Thanks for your time.

Subject: Bay lake project landowner comments

I Live in Southern Dickinson County MI and currently there is a 138 KV ATC corridor (A35-3 according to your map) on my property and I do not desire to have another corridor sited adjacent. The impact of the current easement (dating back to the early 1900's) is a significant encumbrance on my acreage and property value. I pay property taxes on the currently impacted acres but have extremely limited usage I benefit from land because of the easement restrictions and receive no benefits what so ever as a result of the easement. In fact we've had to deal with adverse impacts including persistent trespass, illegal ATV use, illegal dumping, and shooting. The reconstruction of the easement corridor several years ago was difficult and I hesitate to think of the negative impacts of a new 150 foot wide mega high voltage line being built parallel to the current line.

If that course is under taken and the new line runs south of the existing line, it would 'take' a significant portion of my ownership. It would be built over my septic drain field and be within 35 feet of my residence. I had planned to build a garage on that portion of my parcel but have had to defer those plans pending the outcome of this. I would certainly expect my home and property value to plummet accordingly. We purchased the home as an investment in a highly desirable resale location. That would be negated by construction of a new line and nearly 250 feet of parallel lines and clearance strip. Further my rights in lands would be severely encumbered by new easement restriction which would further reduce property value, usability, and resale prospects. Construction to the north of the existing line would be further from my home but would still entail many of the same economic, land use, and aesthetic impacts.

Having two large lines, especially a 345 KV line, that close to my residence would have a negative impact on my family's health (two young children) and well being. With a spouse that's a medical professional and me as a resources scientist, we are cognizant of the impacts of EMF and other human health considerations which can not be understated or ruled out. Certainly case law and scientific literature cites probable health impacts. Coupling the 138 and 345 lines in close proximity could complicate the situation further.

Therefore we oppose the construction of a new corridor parallel to the current line across my property.

It has come to my attention that in october you are developing a route for powerlins possible through my property. My concerns are I have a small property 2.5 ace if you go threw my property it will totally destroy its value. I just built a new camp on this property and have a total investment of 45000 thus far. At your earliest convenience please contract me if you decide to route through my property. I also have other concerns.

Is this a new electric company building a line or is this up dating the existing line? What is the cost to consumers in the area. I also have property in felch area, how will this be effected? Why is this needed in this area of the Upper Pennisula? Who will cover the maintence cost of the substations and lines if damages occur?

Specifically in Dickinson County, Michigan, are the plans to utilize existing rights-of-way for the Bay Lake

Project? As a retiree of WE Energies I have a pretty good knowledge of the present substation and transmission line locations. The Bay Lake Project is on our meeting agenda for this Thursday so any info will

be appreciated.

Thank you,

Mike Selma,

Comments:

Please find the attached comments from City of Norway Town Hall Meeting with Mr. Brett French, ATC Regional Manager and Residents of the City of Norway; 1. How many amps go through the line?

2. Residents were not called about the first ATC meeting even though ATC said they had been.

3. Residents called the number provided online and received little information back from ATC.

4. Your goal is to connect Morgan sub to National sub and you stated a desire to separate lines for reliability reasons, yet you are running everything through plains sub which would make it a choke point and potential problem if something hit plains.

5. Isn't the reason you want to take power from Green Bay area and move it north is because there is excess power there with all the plant closures?

6. How is the compensatin for the easement calculated?

7. How many acres do they take on a 150 ft easement per mile.

8. How far down the list of routes are section lines when planning routes?

Why would you go thru a historic land mark, Norway Spring, go north turn east thru the prettiest scenic valley in Norway? When you can go north on an existing power line 2 to 3 miles to state land then go where you want. Why turn east when you want to go North and save money. This area has underground mine shafts, 2 were discovered near our home. Mine inspector did not have information about them.

On May 21, 2012 I attended an informational meeting at Pine Mountain resort in Iron Mountain MI. One of the routing possibilities was on the section lines near my property at W5487 Vigo Lane. One portion would encroach on the southern portion of my property. Also if both possibilities are used, I will be practically surrounded by power lines as my neighbors on both the South and East will be wipe out.

I suggest you find another route.

Sincerely,

Edward J. Coates

Subject: TOWERS & POWERLINES

To Whom it May Concern:

I, Wallace C. Evance and my wife, Shirley M. Evance, want to go on record as **STRONGLY** opposing you putting towers and lines on OUR property at anytime!*

*

We do not want them destroying the beauty around us and lowering our property value. In addition, we are concerned about safety, radiation, ac humming, tv and radio interference from your power lines.

It is time to take that old law off the books giving companies like yours the right to grab taxpayer's land. There may have been a need for it when railroads were being built across the nation, after the civil war, but not now.

There is a power plant in Marquette, Mi that should be made larger to supply the electrical needs for that area. If it were enlarged, there *would not *be a need to put your power lines and towers on our land and throughout the beautiful U.P.of Michigan.

Sincerely,
Wallace C.and Shirley M. Evance

We reliaze the importance of a reliable power grid. But we do not feel we should have to sacrifice our propertey value by having a 345 kilovolt powerline running on two side of our property. When their our existing routes that could be used to the west of us.

Dear Sirs,

I am writing to express my opposition to the proposed 345kv line route through Norway. I am one of the

affected landowners and did not receive any notification from your company. I have reviewed a map and aerial

photos obtained by a neighbor that attended one of your meetings. This new proposed route through the City

Limits of Norway would have a detrimental effect on property owners, agricultural, wetlands and any potential

development in the future. Your maps indicate that you have several other routes including existing transmission routes available to you. I would encourage you to choose one of your other options.

This huge

transmission line through our City Limits will have a negative impact on our community.

Respectfully,

Mark Grosso

American Transmission Company

Attn: Brett French, Regional Customer Relations Manager

801 O'Keefe Rd.

De Pere, WI 54115-6113

This letter is written regarding the Bay Lake Project and possible routes in the Upper Peninsula. I've also called the toll-free number

seeking information and left two messages at your Kingsford, Michigan location (906) 779-7905.

Unfortunately, I was unable to attend

the meetings held in Dickinson County. Your original mailing (dated April 26, 2012) regarding the project went to our business address

in Marquette County, and we expected to hear more about that area.

Let me begin by assuring you that I am not 'against' electrical and industrial "progress". Like so many other regions of the country, the

U.P. is economically encumbered; I am curious what long and short-term effects a project of such magnitude would have in this area.

How many sustainable jobs would be created for local residents, for example? It's my understanding that the new lines are needed in

part to support the mining industry. There are no guarantees that those particular mines will remain open long-term due to the tenuous

steel market. Several mines have already closed in the Upper Peninsula never to reopen. While I can appreciate the fact that our

electrical grid needs upgrading I believe that it can be accomplished without landowners having to compromise or redeem their private property.

I am a 41st generation property owner in the northeast portion of Norway, Michigan. My family had been dairy farmers on this very land

for 3 generations, since the 1880s. Over the past decade, I was able to purchase the remaining land from a relative and built a home

on it just last year. I provide this brief background to provide you insight as to the 'deep roots' I personally have to this particular piece

of land. The terrain includes small streams, larger rivers, dense forest and bluffs. The environmental impact in this area could be devastating.

As I study your printed information and interactive maps on the website, it appears that both "Project 2 and Project 3" cross

my property. My home site appears to be centered between the two 'projects'. I am not in favor of this route, especially when

there are other established routes that may prove viable. There are other proposed route corridors that have far fewer

residents than this area. I suggest that you consider utilizing state-owned land and existing routes. Although each neighbor will need to express their opinions individually, I know that many of them are already concerned about the

Bay Lake Formal Comments - Additional Comments by County/Municipality

potential health risks that living near such large electrical transmission lines may cause. There are several residents that already have long term debilitating illnesses (cancer, primarily) and there is strong evidence finding a relationship between ELF-EMF and various health conditions. I understand that when assessing danger, distance is all-important, and that the corridors proposed in this area are up to 3000 feet wide. That amount of property would essentially include my entire home site, and then some.

Thank you for the opportunity to comment on the Bay Lake Project. Again, I am not in favor of the project crossing my property, but am confident a more efficient route affecting fewer residents will be found. Please call or write me as new information becomes available.

Best regards,

Katherine Hart

I would like to express my concern regarding a proposed 345KV electrical transmission line to be routed through the northern city limits of Norway. This proposed route will impact my property values tremendously. This type of huge power line poses a risk to our local agriculture environment & health, Our trout streams, watersheds & wildlife may also be affected. ATC has other routes available. Please explore other options. Thanks for your consideration.

We are vehemently opposed to the placement of any transmission lines placed on our property. There is an existing line that borders the railroad track to the south of our property. We are hopeful that you will follow the existing line to minimize the impact it would have on our property and property value.

Your map is extremely vague, and it is impossible to see what your intention is by the map. For us, placement of high power transmission lines on our property would be devastating.

Dear ATC, October 2, 2012

Please stay off of our property and stay out of the city limits of Norway with your new high powered transmission lines. According to your map, if you come on to our property with your line you will be affecting our entire 62 acres of land. We have a long narrow piece of property, and the value (both monetarily and emotionally) of our entire property would be affected grievously. If you must come our direction, please stay to the south of the railroad track. You would be making a smaller footprint and affecting less land that people actually live on.

Your information states that high power lines don't affect the value of property. If you were buying a piece of property and had the choice of two equal parcels, the exception being that one has high power transmission line on it, can you honestly tell me you would choose the one that has the power lines on it over the one that does not? I doubt it.

At a recent meeting in the city of Norway your representative stated that if it were not for ATC we would have been without power because a tree fell on a line and cut the city owned power supply off. I felt that this was a scare tactic. We can survive without electricity for a day or even more while lines are repaired. We've done it in the past.

The same goes for your theory that you don't want to follow your existing lines because as your rep said, "We don't want all our eggs in one basket." With the equipment you presently have there is no reason that you wouldn't be able to repair lines in a reasonable amount of time. It is your responsibility to consider the environment and the people you will be affecting....MORE than your own monetary gain. It is your responsibility to make your footprint as small as you possibly can - not as large as you possibly can as your projection maps indicate.

As for the health hazards of high power lines - your website indicates that there is no evidence of health hazards when in fact scientists and researchers have proven there is. I am much more inclined to believe them than believe a company looking out for their own profit. My belief is strengthened by the fact that I personally know two people who died of cancer that lived in close proximity to high power lines in Niagara. I probably know more, but haven't made the connection.

If you're concerned at all about being a good neighbor and about our environment you will consider what is best for everyone involved and not just what is cheapest and most profitable for ATC. By sticking to existing routes and avoiding populated areas you can reach your goal with the least damage. Whether you know it or not, you are deeply affecting the lives of the people whose property you're invading and that should be your first consideration.

Thank you,

James and Gail Stanek

Subject: Bay Lake Project concerns - Norway

Dear Bay Lake Project engineers, coordinators, and project staff:

I wanted to take a few minutes to voice some concern for the proposed transmission lines that were to run from Norway, MI to Ishpeming, MI. I have received notice that this route has been postponed and the need to construct this transmission line is being reevaluated. I hope my concerns are heard if or when that route is proposed again.

The current route has the transmission lines running in close proximity to the Norway Spring. The Norway Spring is a historical site where thousands of people visit annually. It would be disappointing to see transmission lines become the backdrop to this designated historical site.

The transmission lines are to run north after US2 and then turn east. These lines would cross Valley View Road. The name of the road is a good description of this location. This valley is a picturesque valley which is a popular destination for bird watchers and photographers. Transmission lines running through the heart of the valley would ruin the tranquility that is so often sought after.

Much of this area is within the City of Norway. I urge ATC to look to the rural areas to the east and west of the city to cross US2 and head north. I believe establishing a better grid system and meeting the increasing demand for power is essential but running through a city's most historical and scenic areas needs to be reevaluated. With the UP being so rural, it seems there should be a sensible route for the new transmission lines that has less of an impact on so many residents and visitors.

Thank you for your time,

Joe Tinti

We are very opposed to this transmission line running through Norway. First of all, we feel that there are other routes available that were not considered, that would have the least impact on private landowners. The line would lower property values as well as cutting through prime farmland, resulting in less useable land. The line would decimate the esthetic beauty of our community, Norway. We are uncomfortable with the use of herbicides that will be used near our home and throughout our community, especially areound Fern Creek, Pine Creek, and WaterWorks Creek, which are well known troutstreams. We are uncomfortable with the lack of long term studies done on the effects of EMF. We are nervous for ourselves, our young children and others in our community. We are uncomfortable opening up our land for the potential of trespassing by foot and/or ORV traffic. I suffer from tinitis and am sensitive to continuous audible noise. We live out of town for the quiet and would rather not hear the "hum" of 346,000 volts running overhead. We feel a suitable solution can be achieved by working with a local committee and ATC personnel. Please contact us if this is a feasible option. In reference to Line Section P-80-3, P170-3

Subject: Bay Lake Project comment

July 24, 2012
American Transmission Company
LocalRelations@atcllc.com

Sir:

We wish to comment on the proposed routing corridor P170-3 for the Bay Lake Project which includes property we own in sections 22 & 27, T. 40 N. -- R. 29 W., Dickinson Co., MI.

We strongly oppose placing the easement on our property for the following reasons:

First, this property was placed in a Tree Farm program under a Landowner Forest Stewardship Plan dated Jan. 1995. The intent was to manage for sustained production of high quality hardwood saw logs as part of our retirement program. If the easement included any of the property it would reduce the income significantly.

Second, we are concerned about problems with trespass. Power line easements are used legally and illegally as points facilitating motorized access to large areas of our county. At the present time this access is limited by lack of roads passing near our property. This privacy is one of the unique features of the property which enhance its value.

Third, we are very concerned about the potential of your tree trimming management practices which are likely to increase the risk of spread of Oak Wilt into our mixed northern hardwood timber stand. This disease is currently devastating the red oak a few miles south near the town of Norway and is easily spread by mechanically trimming trees during the growing season. Such spread into our Tree Farm would severely damage the oak timber component, again reducing future retirement income.

Fourth, we have seen many exotic species along the transmission line easement adjacent to nearby Fumee Lake in addition to the Buckthorn and Honeysuckle you refer to in your management comments. Clearing the forest and the accompanying disturbance of the soil along the easement will promote the invasion of multiple exotic species such as Autumn Olive, Reed Canary Grass, Spotted Knapweed, Canada Thistle, European Swamp Thistle and many other species. Your management of invasive species does not appear to address these and other aggressive non-native species which are encouraged by your easements. This is despite the fact that these are species whose introduction causes or is likely to cause economic or environmental harm or harm to human health. (1)

In summary, we oppose the currently proposed routing of corridor P 170-3.

Respectfully,

Miriam D. and W. A. Belding
W5460 Pine Dr., Norway, MI 49870

I'm deeply & immovably opposed to the construction of a transmission line on our family property, which we have has since 1900. This land is in T40N229W Sect 21 of Norway twp, Dickinson County. If this route is chosen, you will impact a number of endangered/threatened plants & animals. I cannot understand why you folks don't widen and use transmission corridors already in place or at least follow a highway. I've been a natural resources manager for over 40 yrs and with every new proposal a new swath has to be cleared - you & I know this is not necessary; its time that you show some respect to our natural resources and our U.P. culture. Keep this line adjacent to existing lines or road R.O.WS!!

Our family has owned this property for over 100 yrs. We have built 2 500 K + homes and 3 camps on it.

If this route P170-3 is picked, the neighbors and I are willing and will do everything in our power to stop it.

Are all the blue line going to be new power lines? I believe the dotted lines outline the project areas but I can't tell if the blue lines are new or exsisting lines and the lines are also wide were exactly do the go?

Thank You

We are strongly opposed to any transmission lines going through our property. We worked all our lives in Southern Wisconsin and finally retired four years ago to the natural beauty and peace of the U.P. We looked long and hard to find our little piece of heaven. We DO NOT want the ambience and serenity we now enjoy spoiled by an ugly transmission line. DON'T tell us that it will not negatively affect our property value, eco-system or benefit us in any way shape or form.

These comments are in regards to the Bay Lake Project corridor P10-3. This projected corridor travels through my family's property which we have worked to acquire and keep in a pristine & natural setting for 3 generations. This entire area is unique in as that there are few roads and has been untouched for over 100 yrs. In addition to the fact that this will greatly decrease the aesthetic value of the property, it will open up a pristine wildlife area and create problems with trespass on our property. The environmental destruction on this area would be catastrophic. The proposed corridor cuts through the heart of a dense cedar swamp that is used as a winter yarding area for whitetail deer. There is already a transmission line to the west and one to the south. I would hope to see this line follow one that is already in place. PLEASE do not keep intersecting these through our forests!!

Comments:

I would like to express my concerns to this proposed corridor. This area is pristine and remote land that is both private and public land. The area between Benton's and Carney lake is very unique in the fact that there is a stream/marsh connecting the two lakes that limits access and human activity, this proposed corridor would open up this pristine land from both the south and east, this untouched area is home to Bald Eagles, and all sorts of wildlife, but most importantly the north south corridor would run through the heart of a dense cedar swamp that is a vital winter yarding area for whiteail deer. Please take this information into consideration when reveiwing this. There is currently a transmission line to the east and one to the south, PLEASE keep these line together to minimize the footprint rather than cutting up our wilderness. Thank you

We do not want this project to traverse our lands. The land in question has been acquired for it's natural, pristine, aesthetic value. We have planted hundreds of trees through the past fifty years. This land and buildings are where we go to remove ourselves from power lines, noise pollution and the masses. We are 100% against this proposed route.

Our land issues have been cancelled for now. Why do you have the right to just go on whatever properties you determine will be used? You are just another company. Why can you use the eminent domain rules? We don't have a problem in the upper peninsula of Michigan with power outages. We don't need this.

Subject: re:P170-3

My name is Ed Zychowski. I live within the P170-3 zone of the proposed transmission corridor. I want to reconfirm my desire not to have the transmission line located near my home. Today, I noticed in the Daily News that the Norway City Council pass a resolution against the building the high voltage electric line through the corporate limits of the city. (See the article below) I too feel that the transmission line will decrease my property value and, as cited as a reason for the resolution, ¿there are health concerns for people living near such lines¿. So for the same reasons that the city will not allow the transmission line, I also oppose its construction near my home.

Norway passes resolution to stop ATC line

August 20, 2012

The Daily News

NORWAY - Norway City Council on Monday passed a resolution against American Transmission Co. building a high voltage electric line through the corporate limits of the city.

The resolution states the transmission lines are known to decrease property values, there are health concerns for people living near such lines, and as the construction of the line may inhibit further growth and development in the area around the lines.

In addition, the area being considered for the line would lose much of its natural scenic value.

For more on this story, see Tuesday's edition of The Daily News.

Attention: Bay Lake Project Comments

From: Eric & Jennifer Defenderfer of Brighton, Michigan.

email: EJ_Defenderfer@yahoo.com

We own property with our friends Tracy and Nancy LaFleur of Kingsford Michigan. We reviewed the Bay Lake Project details in the mailout. We have not attended any of the public meetings as we have not been directly notified by ATC.

We are strongly opposed to a powerline running on our 120 acre parcel. We are about 1 mile east of M-95 in northern Dickinson County. We are across the highway from Sawyer Lake. Our property is actively managed for timber, wildlife, hunting and recreation by our friends and family. A powerline would significantly degrade the intrinsic value of our property. This would be unacceptable.

We are specifically opposed to the corridors shown on your map as follows:

S120-3 (along M95)

P160-3 (appears to cross right through our property)

There is abundant state land further east from our location in Dickinson County. There is already a north/south power line a couple miles east of our location - I believe that is A200-3. Pls consider running the power line on state land away from M-95.

Please keep us informed. We will inform our local state and county representatives of our negative position on this proposal.

thanks for your consideration.

We are NOT interested in having another "swath" cut through our property.

Presently we have a 60 foot easement for Enbridge's pipeline and 120 feet for Transcanada's 2 pipelines.

For our retirement we bought a wooded 40 to live in the woods and the 150 feet you say you need for your transmission line for us will be like living in a field!

American Transmission Company
2 Fen Oak Court
Madison, WI 53791-8614

Re: My Comments & Objections to The Bay Lake Project

Dear Sirs:

I attended a meeting sponsored by your company last Monday (May 21, 2012) at the Pine Mountain Resort in Iron Mountain, Michigan with respect to the Bay Lake High Voltage Transmission Line Project. My property is one that could potentially be affected by this project.¹

After considering the comments made to me by your representatives last Monday...and after also considering the other available routes for this transmission line..I have concluded that any attempt by your company to site this transmission line directly on my propoerty will cause serious and irreparable damage to my property, and also result in an eminent domain-like taking of my property with just compensation being due to me if that occurs.

If my property were twice as large as it is now (in a north to south direction), or if it was laid out differently than it is now, it might be possible to site this high voltage transmission line on my property without causing any serious or irreparable damage. However, that is not going to be possible given the small size of my property as it exists now, plus my inability (and my lack of desire) to make my property larger by purchasing one or more adjoining parcels.

I have already decided that I will not grant ATC an easement if ATC decideds it wants to run this high voltage transmisison line directly on my property. Rather, ATC's only option if it makes that decision will be to take my property in an eminent-domain-like proceeding and then pay me for its fair market value. Eminent domain proceedings are nasty, lengthy and expensive; they create lots of ill will with landowners; and they are not always successful. That is expecially true when (as here) the taking is attempted by a private company rather than a valid governmental body, and especially when (as here) other viable (or even better) siting options exist. As such, it will not benefit either of us to get in a legal dispute of this nature.

In my opinion, the best location for this high voltage line would be along State Highway M-95, which would not impact me at all, and which would receive no objections from me either. The second best option would be along the railroad tracks that lie on property directly across the road from my property, and which run across the Sagola Township Sportsman's Club property. It

¹ My property does not have a street address because it is a small (8 acre) undeveloped piece of land. However, it is located in Sagola Township, Michigan, on the corner of Sawyer Lake Road and Eastpoint Drive...then running east along the south side of Sawyer Lake Road toward M-95 as well as south on Easpoint Drive toward Sawyer Lake..and directly across the road from the entrance to the Sagola Township Sportsman's Club. An aerial map of my property is already in your computer system. Therefore, you should have no trouble locating it by using only my name.

American Transmission Company
May 29, 2012
Page 2

is not likely that I would object to this location either, because it would be far enough away so as not to create any issues, problems or permanent damage to my property. As such, I encourage ATC to give serious consideration to locating its high voltage transmission line in either of these other viable locations.

Finally, I demand to be kept fully apprised as the siting and regulatory approval process unfolds, especially if ATC decides to site this line directly on my property, or directly across the road from my property along the existing railroad tracks. I further demand to be given notice of all public hearings with respect to this matter before the Michigan Public Service Commission or any other Michigan governmental or regulatory body well in advance of the public hearing dates.

Sincerely,

(signed)

This area near our home has a creek and cedar swamp which is a northern Dickinson County deer yard. There also are small ponds along the creek that are used by waterfowl. Our house & garage sit close to the south property line along with our horse pasture. We built the house and cleared the land ourselves and would hate to lose it. It would hurt the deer population to lose this large cedar swamp & deer yard on our property & surrounding 40's.

Thank you!

Dear ATC,

In May there was a meeting at Pine Mountain, at that meeting the intent was to cross our property in Sagola township of Dickinson County. Of this we would not have the power - line to cross our property. This land is used for the purpose of farming such as we have had to remove stones & rocks. Other than that we have had to spend money so we are able to water these crops. This is our reasons. Thanking you, we remain,

Sincerely,

We own property about 1 mile east of M-95 near Sawyer Lake. We would strongly oppose a power line crossing our 120 acre property. We have carefully managed our property for timber, wildlife and recreation of our family and friends. A powerline would detract significantly from the value of our property.

There is extensive state forest land a mile or more east of our property. Run the power line out of sight of M-95. There is already a powerline running North South in this area.

Thank you for considering our strong opinion in this issue.

A representative at the open house I attended on May 21st suggested I comment on what I told him. My home is situated in Sec. 11 of Sagola Twnp, Michigan. Identified for your purpose as P150-3. The continuation of the transmission line would affect my home if it runs along my eastern property line. It's not unreasonable to request that the line be built at the Section Line that borders Sec. 11 & Sec. 12. That one is vacant corporate and State land with a couple scattered camps. Keeping the transmission line as close as possible to the above mentioned section line, would have the least effect on my only home. I am the only year round resident in the area. To: French, Brett

Subject: Proposed transmission lines

I attended the open house in Iron Mountain on May 21st of this year. One of your representatives suggested I

comment on what I told him. I did so by mail, but as of yet I've received no reply. Perhaps it was lost in the

mail, so I'm now making it again.

My home is situated in section 11 of Sagola Township, Michigan. It is identified for your purposes as P 150-3.

The proposed construction of the transmission line would affect my property if its path cuts along my eastern

property line. I don't think it's too unreasonable to request that the line to be built run at the section line that

borders Sec. 11 and Sec 12. That area is vacant corporate and State forest with a few scattered camps. Since I'm

the only year round in the area, keeping the transmission line as close to the section line would have the least

effect on my only home. Please keep me informed as the situation evolves.

Subject: Bay Lake Project

Hi:

I own property in Sagola Township, Michigan and am interested in the proposed power line path. While the map key indicates a red line for the proposed 345 kV line and says it will run from Green Bay to Ishpeming I cannot find the red line north of the plains substation. It appears to become black at that point and runs about 5± miles east of hwy M-95. Is that correct?

Thanks

This project is over due by a decade or so. I worked on the 138 KV line from Marquette to Green Bay in the late 60's. Always wondered why it was not bundle or higher voltage. Stay on the old easement if you can - very good - lived in Iron Mountain area at the time.

I think it is needless to run new transmission line through the U.P. We have already a viable power plant in Marquette MI. The distance the power will travel and the amount of line loss and the cost of loss would easily pay for AQCS and SCR on Presque Isle. Also PIPP is the anchor for the grid at its most Northerly Point in MI. It is important to keep the sign wave at 60 hz. For the large equipment at the mines, and if the power fluctuates lawsuits will occur. Also the times are about to change and we should wait until the next election to see if someone with business sense comes into office and lessens the ridiculous EPA Regs.

Thank you for your time.

Subject: Bay Lake Project

We recently attended the informational session at Pine Mountain. We were told to e-mail our responses/comments:

We live in Segment A60-3. We already have a DTE main line going through our back yard and two power lines on our 40. One along M-95 and one high power transmission line on the back. We do not want another power line, especially a large one on our property. We will never be able to re-sell our property if it is criss/crossed with natural gas/power lines. This proposed line would use up approx 4 acres more of our land. We very much enjoy living out of town and use our property to walk on, look at, etc. This line would take away from the beauty of our property and reduce the resale value of it. If you use the proposed M-95 route, this eye-sore would be the first thing we would see when we leave our house and the first we would see when we return. I hope a more appropriate is used, not one along M-95 where families are living.

I would like to know how this project will affect my property if the proposed route cuts through my property and is not in the right of way? Will I have to simply sell any portion of land that this project may need, or do I have the right not to sell? If you could please provide information through this email address as to what my rights would be as the proposed route now does cut through my property at W7718 Leeman Road, Sagola, MI.

I have called the phone number listed in the letter I received, however none of my questions could be answered, so I was a little frustrated about that, as this should be something that could easily be answered that you should have dealt with on previous projects so would therefore know how to answer these types of questions.

Thank you.

Comments:

Thanks for the original information and for having this open house. It was informative (plus I liked the printed out map, thanks!)

I have no problem with your project. At this point I have no concerns with working with you on obtaining an easement onto my property for your use.

Please do your best to keep me informed on the decisions and progress you make on this project.

Bay Lake Transmission Line Project P80-3

We would like to see this project built else ware...Reasons we feel this way are:

1. We paid big bucks (\$) to have our power put underground. No poles or lines to look at.
 2. Privacy - If the line goes in, here come the people, 4-wheelers, snowmobiles, hunters, etc.
 3. The proposed line would be within sight of our house in plain view. We built 8 tenths of a mile off the main road to enjoy the wilderness.
 4. Question? Are there any side affects to human health due to high power transmission lines?

Re: Bay Lake Project

Dear Mr. Hovde:

We are in receipt of your correspondence of April 26, 2012, regarding your preliminary plans for the new power lines which are part of the Bay Lake Project going between Green Bay, Wisconsin and Ishpeming, Michigan. Unfortunately, we are unable to attend the open house regarding this project. We understand that you are only doing the project study at this time to identify potential corridors to be used as transmission line routes on the proposed project. We expect that if the project is approved you are going to do an Environmental Assessment and/or an Environmental Impact Statement among other reports.

As you are aware from your letter, Steven B. Novy, the undersigned, owns property on what appears to be the edge of the potential corridor identified as PI0-3 in the Lyons Lake area of

Bay Lake Formal Comments - Additional Comments by County/Municipality

Dickinson County. Specifically the legal description is as follows:

40 acres more or less as the southeast quarter of the southwest quarter (SW 14 of SW 14), Section (19), township forty-one (41) north, range twenty-eight (28) west township of Waucedah, County of Dickinson, State of Michigan.

It is commonly referred to within the Waucedah Fire District as W4742 on the Merriman Truck Trail/Lyons Lake Road. It is directly East of Lyons Lake and prior to the intersection of the Norway Truck Trail.

We are aware that at this point your project may only be a proposal whose the corridors are uncertain, however, even at this early stage you should be aware that the above property has unique features including several wetland habitats and old growth forests - not virgin but definitely untouched since the carpet bomb logging of the 1800s. There have been hundreds of trees planted. Further, the property has been otherwise restored protected and enhanced the natural diversity associated with it. We are conservationists who have protected this ecosystem from clear-cutting on several occasions over the years.

Moreover, we have also consulted with the local and state resources over the years to develop a sustainable, balanced approach for recreational and low-impact use of this particular piece of property. The undersigned's brother, a U.S. Forester, is intimately familiar with and has actively assisted in the management of this property to bring it to where it is today.

We had also engaged a PhD Environmental Engineering Scientist to review and survey the property on several occasions over the past years. He has also played a role in its management. If necessary, he will provide American Transmission Company with the environmental information regarding the unique features of this specific location. It is his opinion that power lines cutting through this property would be a travesty. Further, it will cause irrevocable damage and will have a chronic impact causing cumulative effects into the future.

We are writing to advise American Transmission Company that we want to be involved, informed and work with you during the course of your study period. Due to the unique nature of our parcel, we need more information including when you will be conducting your field studies or reviews as well as who will be in charge. Please provide your timeline and/or proposed schedule. Also, advise if you will have a website which will provide more access with detailed information, maps and reports so that we may provide our insight.

Our requests of course for any governmental documents or information, is made pursuant to the Freedom of Information Act. Kindly send or provide the information requested to the undersigned at the above address or by e-mail. If you have any questions, please do not hesitate to call or otherwise contact our offices.

Very truly yours,

CHILTON Y AMBERT & PORTER LL

Dear Sir or Madam:

We have received notice that new power lines are being considered in Dickinson County. We strongly oppose yet another power line through or near our properties in Sections 31, 32 and 29 of T41N-R27W in Breen Township. We already have two 345-kilovolt lines running the length of section 31, and along the western and northern borders on Section 32 dividing our properties from Section 29. Please review a plot map of this region. A105-3

We recently were required to have our power line easements extended resulting in the loss of valuable timber by this process in 2011 and early this year in 2012. We are not compensated for the timber in any way or means, and must pay maximum "residential" property taxes on land that is useless to us. No timber or farming is possible in the easements; there are also no building options. The power line easements run more than 1.75 miles through our property and border the wetlands surrounding East Lake. The current easement is 450 feet wide. We should be getting compensation for the use of our land by ATC but are currently getting nothing except having to pay taxes.

We are fiercely opposing any expansion of your power line easements. The current easements are already an eye sore and a nuisance. Adding an additional 150 to 300 feet in width will severely impact on our property rights and value. No standard monetary compensation would be adequate to offset future tax liability, loss of timber and loss of esthetic value. We own one of the few private lakes in the Upper Peninsula of Michigan, - East Lake. Another power line passing even closer to the lake will ruin the wetlands, the wilderness view from the lake, and esthetic value of the property.

Please move your power line project to another location that has less impact on private ownership: use State lands, bury the cables, or develop a power plant closer to the end source.

Sincerely,

We strongly oppose another power line through or near our property. Two lines exist already degrading the value and esthetics of the property.

We pay the highest rate of residential taxes on property that is useless to other function's. We will not tolerate expansion. The private lake on the property is close enough to the current power line that another will interfere with the wetlands habitat and view from the lake.

Last year we had the easement expanded with loss of timber without compensation.

Move your power lines elsewhere, bury them or develop a new power plant closer to the end source.

We strongly oppose a third power line through our property and are pleased to see that the portion through Quinnesec to Ishpeming is "deferred". We have never seen three high voltage systems together and would fight any attempt through legal means possible. The easement already 300 ft through the property <-near Foster City, MI 2 3/4 miles long prevents our use of the land and doubling this would be an unfair taking of our property. We pay residential property taxes to support your company & you give us nothing in return.

Move the New lines elsewhere!

Comment Date: 10/15/2012, by Michael Wills

Seg:

Communication Type: Formal Comments

PDF Name: C_MWills101512a.pdf

We found and bought the almost perfect spot to retire near Foster City, MI. But there is an almost 3 mile long, 300 ft wide easement of a double power line running right through our woods. Now you want to put a third line through! And take more land a way from us! We are "off the grid" because the power company would charge \$100,000 to run the supply lines to us. But we must pay residential taxes on the easement land we can't even use. Can't you find a route with less impact on residential people?? And avoids East Lake, Breen Twship Dickinson Co.

My property is on the Ford River 3 miles West of Northland. I, along with 2 other neighboring land owners considered splitting the cost to bring power in from the pipeline but it was just too far & too costly to do. Your proposed route of running power down the Escanaba & Superior railway right away is a great idea & will be able to service all 3 of our properties as well as the residents & bible camp on the South side of the Ford River. I have hesitated to build on the property because of no power down the rail right away. I am excited about your project. It will help a lot of landowners in Dickinson County.

I have a camp with 40 acres of land in Dickenson County. I was told at the meeting in Ishpeming that one of the suggested routes for this power line would follow a railroad line that borders my property. The Ford River comes within 20 yards or less of this railroad line at one point. Also, on the other side of this railroad line, at the same point is a very steep hill that has an abandoned fire tower at the top. The bottom of this very steep hill butts up to the railroad line. There are numerous people who use this fire tower hill. It is used for recreational purposes through the spring, summer, and fall. Due to the height of the hill, it is the only area to get cell phone coverage. See enclosed map.

We are very concerned about the possibility of a powerline crossing our property. It would completely ruin the integrity of not only our property but all that is surrounding it. We bought the land (22 acres) to have a remote wooded place to camp and eventually build a cabin on it. There is a small clearing for that purpose and that is all we want opened up. The river (Escanaba) crosses part of the property, so there isn't that much available for building. We fear this would destroy our chance to sell this property (now or in the future) as no one wants a camp with a giant powerline running through it. We can't afford to buy another piece of property somewhere else. Thank you for your attention to these concerns.

Cathy & Mike Brady

To Bay Lake People -

Many of us folks that have property in area's that you wish to put a corridor thro-(A200-3) have owned and paid taxes on for over 40 years now) in my case - a place which is prime wild-life habitat and provides a place which I consider very valuable - to my needs.

I understand that many people require and desire modern convience's, but there are places that deserve to be left in a wild type charecter, and if you can I'd appreciate my little piece of acerage left as it is - The value to me can not be replaced by monitary gains but, if left as nature in tendered, will explain my comments.

Hello,

We have 5 acres of vacant land south of and bordering US 2, west of Kell Road and east of Hillside. We are concerned

about your plans for a new transmission line in this area. A plan to place it south of US 2 would effectively eliminate our

ability to use this land for any purpose. We already have a large underground natural gas main that runs through part of

the property and south of it. We would ask that ATC please consider a route that would not impact this 5 acres, the only

property we hold in the Upper Peninsula. North of US 2 along old US Highway 2 would make more sense to us if you

have to run it along US 2.

We will appreciate being kept informed on ATC's siting plan.

Thank you

I am unable to attend open house at Pine Mountain in Iron Mountain, MI, due to surgery. I want ATC to know that I am adamantly opposed to the preliminary route for the new power lines! According to your map, there is an existing line & an alternative route that makes sense & would not disrupt peoples lives. I would hope you can resolve this in a reasonable time frame, w/in 60 days, so home & land owners lives are not in limbo. A speedy decision in this matter is appreciated & important to all involved.

Thank you.

Comments:

DearATC

First of all, I appreciate the investment ATC has made in the Northern Wisconsin and Upper Michigan transmission

system; your efforts have not gone unnoticed. Secondly, I would like to mention that the Bay lake project also appears

to be a necessary project. I understand the desire to find a route from the south into the Plains Substation. I am voicing

my opinion about one of the routes you are considering in Florence County. The route number P370-2 needlessly affects

many property owners as the other route to the south along the Florence- Marinette County line, Route number 350-2

is predominately in county forest land and would offer a much wiser choice.

Thank you for your consideration in this matter.

A memo to ATC in regard to the planned Bay Lake Transmission project in the Town of Aurora, Florence Co. Wic. Segment P370-2

This piece of forest land has been in our family for several generations. My wife and I have transferred ownership to our three daughters i.e. Illene Zeppetti, Linda Vogel and Nancy Osterberg. However, we and our whold family are involved in the sustainable management of this piece of property.

Our woodland has been managed to produce firewood for two familiies, lumber for Farm Buildings and maintainence, along with some timber sales. Although this is 80 A. of beautiful forest land, we especially prize the stand of virgin hard maple on the Northwest portion of this "80" which is being considered to become right-of-way. The land immediatly to the North & has been clear cut within the past ten years.

We appreciated the "Open House" at Pine Mtn. on October 10. The available maps and abundance of information by staff people was very helpful.

Thank you,

Ken Osterberg

Email: nancyosterberg@yahoo.com

Comments:

My sisters and I hope that our forest property can be spared clearing for the new transmission line. This beautiful forest has been in our family for generations. Ownership has passed to us three daughters. Yet, the forest remains an important part of the economy of our family farm, whose fields and buildings are located at 1195 Osterberg Pkwy, listed under Kenneth Osterberg, Life Estate.

This forest provides 100% of the winter heating for two of our households, all of the lumber for farm projects, and income for the farm (19% of total farm income thus far in 2012 is from forest products). We provide the logs used in shiitake mushroom production by Field & Forest Products, Peshtigo, WI.

This is a working forest, sustainably harvested and carefully managed so that we may proudly pass it on to the next generation of our family. Incidentally, our family farm operates on a 6K solar electric grid inter-tie system, so it seems ironic to us that a new power line would plow through our beautiful forest.

The northern portion of our forest being considered for the power line contains a beautiful stand of old-growth hard maple. Another irony of this situation for us is that our old-growth trees would be cut while the land just north of this section line, which has been recently clear cut, would be spared. The area also contains numerous rugged rock bluffs and a creek originating in a large wetland and feeding the Pemebonwon River.

It appears to us that, if a new west-to-east corridor needs to be carved, the proposed tract to our south contains more county land and few private landowners, thereby making it a little less painful to the local citizens.

Thank you for accepting my comments on your proposed transmission line.

This is a follow-up from the one I sent you previously. I had asked you to please consider all of us that pay full taxes on our property as we do not have any of ours in managed forest crop or managed forest land.

One of your proposals is using the County U corridor. When my wife and I built our new home just north of the county line we chose to bury our power under County U to our home at a cost of \$6,000 dollars 10 years ago. I ask you to please consider the East side as most of that property is Temporary or recreational dwellings. I do Thank you for the opportunity to speak out.

As I stated in my last 2 mailings to you, please have consideration for us that live here permantly and we do not have any of our 120 Acres in Forest Crop, we pay Full Taxes on our land, and we paid over \$6000.00 To have our power lines underground when we built our home. So we wouldn't have To look at over head wires. We Thank you in advance for your consideration

I am writing to submit my opposition to the proposed routing of a powerline through Segment P370-2 in the town of Aurora. That route would run through at least two large parcels of land belonging to my family which we've maintaining for both crop and recreational purposes. A powerline would pose a problem in pursuing our intentions on our property for my family including future generations.

I strongly encourage you to use the existing route currently in use and support that decision. Thank you for your consideration.

I'm writting to state my opposition to the pathway of the projected route for the proposed power line system.

One of the proposed pathways cuts through the forest land owned by myself and my family. The property is located in the township of Aurora, county of Florence, Wisconsin. Property is listed in my name (Illene Zoppetti) and is jointly owned with my sisters - Linda Osterberg-Vogel and Nancy Osterberg.

This wood lot is currently managed and harvested to supplement the incomes of 3 generations and 6 families. Not only does this forest lot supply direct income to these families, it also provides building materials used for construction and maintaining of our homes and farms. I strongly urge you to consider an alternate route.

Sincerely,

Illene Zoppetti

Please don't run this power line threw my town I don't belive that we need it in our area even. I have lived in this area all my life and I only remember one time of being out of power and that was over ten years ago. I don't by the hole more reliable power sales pitch. There is local power plants that should be producing our power not sending it in more then a hunred miles over a line to us. We need our local businesses and stuff in our areas. So build a plant up here or by a hydro eletric plant and up grade it and I will fight for it. Thank you Andy Fleming

The following was received by ATC from the Public Service Commission of Wisconsin.

Stephen Dott
11909 N Solar Avenue
Mequon, Wisconsin 53097

December 10, 2012

Mr. Randy Satterfield
VP Public Affairs
American Transmission Company
P.O. Box 47
Waukesha, WI 51873

Re: Bay Lakes Transmission Line Project, Information Meeting Oct 4, 2012

Dear Mr. Satterfield,

We recently invested a great deal of money when we built our retirement home at 852 County Road U in Florence County Wisconsin. For your reference that is in your project area 2, Segment P360-2.

I was very interested in learning more about the detrimental impact of this project on my property so I attended your information meeting October 4th at the Woods Supper Club in Crivitz Wisconsin. In spite of registering in your computer data base at that meeting, I received a post card from ATC telling me you were "Sorry you Missed Me".

So, my first comment is to please correct your records. Not only did I attend, and check in with your receptionist, I asked a lot of questions and your staff kindly printed several maps of my area.

However, the information provided at this meeting was insufficient to help me understand the impact to my property in many ways. This may not be the intent, but it appears the primary purpose of these meetings is for ATC to collect information that will enable them to plan -- and counter any objections property owners may have to the proposed transmission line.

At this specific meeting my primary interest was the impact to my property if the line was built. The devil is in the details, and ATC could offer no details.

¿ For example, I asked what the line structures would look like as there were photos of at least 4 options and some are less ugly than others. I was told you did not know what the towers would look like at this time.

¿ I asked on which side of County U would you build the lines? No one knew.

¿ I also asked if there was any flexibility in the clear cutting policy along the right of way as this would destroy many 100 -200 year old trees and my privacy. No one could address any flexibility, although I have seen extreme variations in actual cleared right of ways throughout Wisconsin.

¿ I also asked if there was any flexibility to stagger the location of towers to reduce the impact on tree cutting, views, and my property. Again no one could answer that.

I hope you understand there was a lot of generic information provided about how wonderful

Bay Lake Formal Comments - Additional Comments by County/Municipality

electric

transmission lines are, but no information about how ATC might work with me to me the impact to my property.

I question the need for this project, the expensive out of the way route proposals, the overall expense to Wisconsin Ratepayers, and the impact to me and other property owners in Wisconsin.

Sincerely,

Stephen R. Dott

Subject: Project 2 Morgan to Quinnesec

Thanks for this opportunity to ask questions.

My wife and I currently own property in Florence county within the project 2 Morgan to Quinnesec boundary.

The property is located on Flen Rd 2520 in the town of Homestead.

The legal description is T24-38N-18E SW NE.

I realize that decisions are forth coming and nothing is affirmed yet.

How will this project or could this affect our property?

Mark and Kim Hoaglund.

703 Hewitt street

Neenah, Wisconsin 54956

920-915-4373

Thank you again for the opportunity to ask questions.

We oppose this corridor due to the many lakes it will effect & destruction of our natural wooded areas. Your power lines would obviously have an adverse effect in the many private landowners & lake front property aesthetics.

I own 40 acres on the Florence / Marinette line approx 6 miles west of County Hwy U. Rather than staying directly on the line if your route could be moved 1/4 mile north of the actual line it would miss my hunting camp which is a new bldg (built in 2002). Thank you for your consideration

Please advise me as to whether or not this project will directly affect my property. Note the attached legal description. Thank you. PegMMMaginn

I prefer that you avoid my property.

The Northeast Quarter of the Southeast Quarter (NE 1/4 of the SE 1/4) of Section Twenty-one (21).

AND - These parcels are in Florence Co., W.I. on what was known as Hord Lake

Part of the Southeast Quarter of the Northeast Quarter (SE 1/4 of the NE 1/4), Southwest Quarter of the Northeast Quarter (SW 1/4 of the NE 1/4) of Section Twenty-two (22), ALL in Township Thirty-eight (38) North, Range Eighteen (18) East, in Florence County, Wisconsin, described as follows: A strip of land 25 feet wide running East and West and parallel to the North line, and being a part of the Southeast Quarter of the Northeast Quarter (SE 1/4 of the NE 1/4) Southwest Quarter of the Northeast Quarter (SW 1/4 of the NE 1/4) and southeast Quarter of the Northwest Quarter (SE 1/4 of the NW 1/4) of Section Twenty-two (22), Township Thirty-eight (38) North, Range Eighteen (18) East in Florence County aforesaid, being more particularly described as the North 25 feet of said above described lands, to be used by second party, his heirs, executors, administrators and assigns for right of way, highway or road purposes only, subject to the right only to the use of the above described 25 foot strip of land for right of way, highway and road purposes as contained in deed recorded in Vol. 34 Deeds, page 359, Florence County records. The title to the strip of land above described and herein conveyed is to vest in the party of the second part.

It appears from the map that the line could. be along the South line ~wr 40.

The South line of our 40 is the County line between Florence & Marinette Counties.

We own the SW! of the SEt of Sec. 36-T38N-R18E, Town of Homestead, Florence County, Wisconsin. I have highlighted our 40 on the attached map.

Please advise whether or not the proposed line is along the South line of our 40.

What is the normal compensation for a Transmission Line Easement?

Please keep us informed.

Thank you,

William McIntosh

We have a cottage at 917 Sand Lake Rd, Town of Homestead in Florence County. We are at our cottage from April thru November and are anxious to hear about the offshoot of new power lines in this area. We certainly want dependable electricity but too are concerned about the health concerns for animals and humans that these power lines affect by their magnetic fields. We also know many times they affect radio transmissions. Please keep us informed regarding the project.

Sincerely yours,

Elizabeth Taff

Subject: Bay Lake Project

ATC

We recently learned that ATC is considering, as an alternate routing, a corridor that includes Sand Lake and Hord Lake in Homestead WI. I am a property owner on Sand Lake and am very opposed to this routing.

We recently learned of this proposal by seeing a letter sent by ATC to Larry Nuens, another Sand Lake property owner. Until then we had not heard of this very inappropriate proposal.

Please eliminate this routing from consideration. Having a power line in the vicinity of Sand Lake would ruin this naturally picturesque environment. Please use a routing along public roads and preferably where other power lines currently exist.

Please keep me informed at jfzmal@aol.com and jfzu@chevron.com or by writing me at the address shown below my name.

Bryan Creek Corridor: O40-3, O50-3, O60-3

THIS IS A VERY BAD IDEA & A POOR PLAN. THE BRYAN CREEK CORRIDOR IS IN THE MIDDLE OF A PRISTINE HEADWATER. THE BASS LAKES CHAIN IS THE HEADWATER TO THE ESCANABA RIVER. THIS PRISTINE WATER SOURCE HAS BEEN PROTECTED FOR NEARLY 100 YEARS. IT IS HOME TO ENDANGERED PLANTS & ANIMALS. NESTING EAGLES, TIMBER WOLF, MOOSE, & COUGAR, INHABIT THIS AREA BECAUSE OF IT UNBROKEN WILDERNESS, ROAD LESS, NOISE LESS AND PEOPLE LESS AREAS ARE NEEDED TO SUPPORT THESE TYPES OF ANIMALS. THE MINE HAS A VERY LIMITED LIFE. AND OTHER ALTERNIVES DO EXIST KI'S GENERATOR CAN BE EXPANDED & USED IT IS FEASIBLE. THIS AREA NEEDS PROTECTION FROM, NOISE, POISONS, EROSION, ROADS, & GENERAL DELOVEMENT INVASIVE SPECIES, FRAGMENTATION.

Bryan Creek Corridor: O40-3, O50-3, O60-3

In an era of natural resource shortage, areas that offer non fragmented forest, pristine natural wetland, streams, natural springs, and inland lakes should be preserved! The Michigan North Woods Club's property encompasses all of these natural benefits. Due to the current unimpacted state of the property, many special interest plants and animals can be found here including (but not limited to) moose, Bald Eagles, Golden Eagles, and cougars. In fact, recent pictures were taken of a golden eagle. The hydrologic features that would be impacted by this potential corridor will need to be mitigated to counteract effects of loss of habitat, loss of wetlands essential for clean water, and increases in harmful sedimentation, erosion, and invasive species introduction.

Dewey: P40-3 and C30-3

The Michigan Northwoods Club's property is a unique large track of land. It offers the necessary space to large species such as bear, moose, deer, and cougar. Without large tracks of non-fragmented, unimpacted habitat these species need, they would move in to civilization creating potentially dangerous human - wildlife interactions. If these proposed corridors are in fact placed on the MNWC property, mitigation for loss of habitat, loss of environmentally necessary wetlands, and inland lakes will be sought. The club will also keep a close eye on the preservation efforts of special concern plant and animal species as well as monitor the environmental effects of potentially harmful impacts such as erosion causing sedimentation of the streams, wetlands, and lakes, high voltage frequencies effects on the wildlife, and an increase chance of invasive species introduction.

With construction of the proposed Bay Lake project will come the destruction of natural resources & habitat for protected wildlife. Within Dewey Lake, you will find: Sand Hill Cranes, blue herons, bald eagles, black bears, timber wolves & other/numerous plant life. Maintaining these wildlife areas are essential to keeping a healthy vibrant eco system. Destroying the Dewey Lake area as the Bay Lake project would, will eliminate protected species from the area, and severely limit their future.

Bryan Creek Corridor: 040-3, 050-3, 060-3

With construction of the proposed Bay Lake Project, will come the destruction of natural resources & habitat for protected wildlife. Within the Bryan Creek Corridor you will find Moose, Sand Hill Cranes, Kirkland's Warbler, Canadian Lynx, & limitless plant life. Construction of the Bay Lake project would cause erosion to waterways, the Bryan Creek Corridor houses, Big & Little Bass Lakes which are headwaters to the Escanaba River. Creating erosion in the Escanaba River will destroy fish habitat spanning from the Bryan Creek Corridor to Lake Michigan, local, state & federal land.

Comments:

I am not a land ¿owner¿. I am not a land ¿developer¿. Nor, am I a defender of the Michigan North Woods Club. But, I am a land steward. While there may be vast areas of intact forest and wilderness areas in the Western United States, there are not that many areas left in the Mid-West. How many can you name in Ohio, Indiana, Illinois, or Southern Michigan. Most of these States have been chopped up, subdivided, and encroached upon in one form or another so as to be unrecognizable in a mere generation. There are so many reasons that one can emphasize in favor of preserving intact wilderness areas i.e. biodiversity, wildlife corridors, preservation of life forms that are susceptible to even the slightest of human intrusions, water quality, wildlife niche, etc. etc. etc. Volumes have been written on these subjects. We all seem to know and understand this on a theoretical level, but we seem to miserably fail as individuals and communities to take the necessary steps to preserve the few remaining intact forested areas. We fail as corporations to consider the long term value in preserving intact, wild areas. When future generations look back upon our ¿cost effective¿ rationales, will they shake their heads in bewilderment? We are already shaking our heads. I understand the increasing need for electricity nearly everywhere. But, I cannot understand the rationale for proposing to dissect through the heart of a 10,000 acre contiguous forested area. Not in this day and age. Certainly, there has to be an alternative proposal where the view-shed has already been compromised and where wildlife corridors have already been chopped up. I live near a high voltage power line. There is no area along this power line that now goes undisturbed by 4x4 trucks, ORV¿s, and snowmobiles. It is a four season ¿highway¿. Every Tom, Dick, and Harry considers it to be their own personal proving ground. There is no one to keep them out and no way to keep them out. The intruders can circumvent everything. The erosion is incredible and in numerous locations as much as 4ft deep. It is an eyesore and a permanent scar. I am saddened by the current proposals as much as I would be if the proposal was to impact a public ¿Wilderness Area¿ or public ¿Quiet Area¿. Public or private, these few remaining contiguous, intact places should be dedicated as sacred. I will never personally enjoy this property as my own but it is knowing that it is still there that elevates its status to something very special. I am a land steward. I can¿t imagine the sadness of the landowners who apparently have taken significant efforts to keep this contiguous landscape intact and wild.

Please consider an alternative route. Your grandchildren will honor you.

PDF Name: C_RAndrew072612a.pdf

Dewey: P40-3 and C30-3

The Michigan Northwoods Club (MNWC) is a nonprofit, membership - based conservation organization. Since its founding in 1926. The MNWC has consistently devoted its time and resources to the conservation, reforestation, and propagation of fish and game on its grounds. The construction, maintenance, and operation of the proposed high voltage power line will threaten the very existence of the ecosystem this organization has committed nearly a century to protecting.

This area hosts populations of sandhill cranes, blue herons, loons, beavers, moose eagles, a variety of turtles, as well as a variety of plant communities. Infringements of power lines on wetlands and lakes per the proposed activities would be detrimental to all of these species. Changes to the waterways in this area would also be detrimental to area reivers including the Escanaba River, especially considering the use of herbicides to maintain the easement area of the transmission line.

Comment Date: 07/19/2012, by Richard Andrew

Bryan Creek Corridor: O40-3, O50-3, O60-3

We are very concerned about the effects on our lakes, plant communities, and wildlife from the herbicides used to maintain the easement area of the transmission line.

We believe that the power line and associated implementation activities will likely threaten eagle nesting sites, of which we have several.

MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property (>9,000 contiguous acres, with small embedded roads). Whole watersheds are included in the property, and large animals utilize MNWC as a contiguous refuge. By splitting and diminishing the area, the remaining area will be continuously degraded with large animal species leaving the area.

Dewey: P40-3 and C30-3

This area hosts populations of sand hill cranes, blue herons, loons, beavers, moose, eagles, variety of turtles, as well as a wide variety of plant communities. Infringements on wetlands and lakes are unavoidable in the proposed "Dewey Lake" pathway. These wetlands act as valuable habitat for plants, birds, and moose and the combination of forested landscape and wetland act as a combination - regulate both stream - water flow and streamwater quality. The watershed that surrounds and includes both Dewey Lake and Dewey swamp, create the head-waters for Camp Eleven Creek, and this creek ultimately flows into the Escanaba River. Changes to headwater systems are particularly meaningful - they effect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically -friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

Bryan Creek Corridor: O40-3, O50-3, O60-3

This area hosts populations of sand hill cranes, blue herons, loons, beavers, moose, eagles, variety of turtles as well as a wide variety of plant communities. The easternmost pathway potentially infringes on three watersheds, all of which have their headwaters within the protection of the Club's property lines. The first watershed, one that includes Big Drake, Little Drake, Spear, Erickson and Crescent Lakes, is the headwater for Bryan Creek. The second watershed includes Trout Lake, and is the source for Clear Creek. The third watershed includes Little Bass, Big Bass, and Bass Lake Creek. Clear Creek and Bass Lake join Bryan Creek (Bass Lake Creek doing so well south of MNWC property), and this larger version of Bryan Creek ultimately flows into the Escanaba. Changes to headwater systems are particularly meaningful - they affect the integrity of everything downstream. Because of the reliance of the headwater system on the surrounding plant community, there is no such thing as an ecologically friendly herbicides in this content, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

I and my wife Linda are very close to retirement. My wife is disabled & I am 40% disabled as a result of service in Desert Storm. We bought our house in January of 2000. I have worked hard over the last 12 years to fix this place up & have spent close to \$60,000 doing it.

We are in no condition to move again and if we were, not many homes in this area are for sale. If they are I have concerns about starting another project like this as most homes are in bad shape. Also, because of the economy, I would probably still owe money after you buy it cause no doubt fair market value would be less. Please, do not come thru here.

We bought our 40 acres on Barker Road in the town of Amberg approximately 7 years ago. This year we are finally realizing our dream and we are having our retirement home built. We are having the home built as far away from the existing lines that are now on our land. It is a proven fact that people who live near power lines can eventually develop brain tumors and/or cancer. We do not want another set of power lines built on our 40 acres. We had received notices from ATC, but did not realize it was a concern, as we already have a large power lines right through our 40 acres. At the present, we live 200 miles south. Both my wife and I are still working full time jobs, and could not attend the meetings that were being held. If we had any idea that you were even possibly thinking of putting ANOTHER large power line through our property again, we would have made every effort to attend a meeting to voice our DISAPPROVAL of such a project.

We are building our retirement home up in Amberg for us and for our family. WE DO NOT WANT any more of our land to be taken away with power lines. You are going to have to find another route for the power lines - and not through our property.

We already have one set of power lines on our land; it would be very unfair to put another one on it. You would be ruining our lives and the future lives of our family.

Property located in R190-2, along west side of Hwy 141 about 1 mile south of Amberg. Residential and hunting property which already has right-of-way/easements for DOT, WI Public Service Corp, railroad and DNR (Holmes Creek). Eastern half has residence, gardens and fruit & nut orchards. West of railroad forest and wildlife habitat, including creek. Property has widely varied terrain of mostly rock outcrops. Other than railroad, there is only foot access to most of the property. I would oppose clearing another right-of-way which would negatively impact wildlife and seriously devalue the property.

A710-2, an existing ATC corridor is 1/2 mile to the east. I would submit that this corridor, which already has access and some existing infra-structure, would be a much more logical choice.

These comments refer to segment A720-2. I own 3 parcels of land, one 5 acre parcel West of current ATC powerline and 2 ten acre parcels east of ATC powerline. I bought these parcels for forestry and recreation purposes. The cabin I built on the NW corner of the East property is right in the center of your proposed route, along with a rental house across Coleman Ave. on Matt Mattison's property. With the 200 ft. spacing from existing ATC powerline and what I'm told is a 75ft setback from houses I don't know how it will fit without removing my vacation home. You also need to cross the Pike River (A wild & scenic designated river) at bulls falls. I have no problem with current ATC powerline, but 2 powerlines on my small 25 acres would destroy its value!

Comments:

We have property in the amberg area along the north side of Marquis road. We recently purchased another property next to our existing in that area. We understood this area was deferred for now, can you please explain what that means and what chance in the future our property may be affected by a new route. Right now the 375 kv lines cross one of our properties at w7678 marquis road and then run north to on our second property. You can see how we are interested in what may happen as it would remove almost all of our wooded property and its value. Thankyou very much for getting back to my wife and I.

Segment #A700-2 Property - W7680 Wontor Rd. Amberg, WI 54102

We wanted to inform you that our property is currently for sale. Since there are existing power lines on the west side of our property, we do not want to be sandwiched in with power lines to the east of our property. We feel this would decrease the value of our home and discourage potential buyers. Please consider this when making a final decision for the route.

Thank You,

Deborah & Randal Rasmussen

Feel free to contact us at any time.

My property is in A720-2 area and is boarded by Hwy 141 on the west side and the Highline on the east side, north of Bergeson Lane.

I cannot attend any of the meetings but have some initial questions.

1. Will all the work in this area take place in existing Highway and Highline easements?
 2. Will any new areas of my property be used? Underground or poles?
 3. Are any trees expected to be cut/cleared?
 4. Is any earthwork or substators structures be built in this area.
 5. Please chartacterize the work in this area between Berfeson Lane and Cty K.

Subject: Bay lake project comments

To whom it may concern,

I have completed a comment card and spoken with several representatives by phone and comment card. Now understanding the process I proffer the following:

In brief, I have a highline along the eastern side of my property starting at Bergeson lane north. I object to any new corridor on my property and will oppose it to the greatest legal extent, committing the necessary resources to prevent encroachment on to my property.

It appears that there is a viable corridor (where current gas line runs) through Marinette county land that would have minimal effect on private property owners and this project will serve the general public thus, public lands seem appropriate to allocate the corridor.

I would like to be kept apprised of progress, meeting, actions or considerations as they develop and request the ability to voice my position and opposition to encroachment on my property

I already have power lines crossing my property and a 150' easement. It does not look good. The new lines could come through my property and take another 150'. This would be disastoris for me. I have many large trees (150 years old) that may have to come down. Last year some large trees were cut beyond the easement and left laying. (what a waste) I love my land and hate to see it dessimated. Could they not plant the easement with something for wildlife: Some that will not interfer. (Flowers, grasses, deer food, ponds) If more of my land will be used it will make it worthless. I should not have to pay the high taxes for such property.

ARE WE UPSET! YOU BET WE ARE - your map shows M10-2 going right through our families heaven away from the noise, traffic etc we put up with daily here in Sheboygan where we reside. I've been adding & paying for our proerty in the Athelstane area since 1980, Now you tell me you want to come through it or even next to it with high voltale lines? Why in the world won't you use existing corridors with larger tower structures or come up & along Hwy 141 for easy now & future access. I'm asking you PLEASE conside another route other than M10-2 shown on your map.

At the intersection of "A" C480-2 - why would you go East C505-2 North M10-2 & then West P320-2? M10-2 is prime woodland enrolled in managed forest to protect area from development. Why not Cnty Rd A C480-2 to Cnty Rd "C" - C505-2 west and then North (west of Athelstane) to juntion your proposed line to intersect with P320-2 on County Rd "A." this area (west of A - south of Athelstane has very little wooded area & most of it is open field.
See "yellow" highlited area on your enclosed map. This not only would be "less" distance but also less costly as mentioned above this area is much more open area & again "less" distance & most of it is accessible by County Rd's "C" & "A" and also Marinette County Forest land.
*See your enclosed highlited map smaller version map
Thank you

*See enclosed map pertaining to below

We just left your 1st info meeting in Crivitz - At the intersection of C505-2 (E/W) & C480-2 (N/S) you show proposed line running East on C505-2 intersecting M10-2 North to P320-2 then west P320-2 to junction with A130-2 (existing line route N/S). Why would you go that route? Your representative at the Crivitz meeting showed me a plat like book Baylake Project Area Map H4 which shows an airstrip just south of Athelstane & west of county Rd "A". I was told that is probably why route mentioned above was chosen. There is "No" airstrip located here. C480-2(N/S) to C505-2 West on County "C" to Newton Lake road then North along Marinette County forest land to intersect P320-2 (see enclose yellow highlited map) would be a much shorter distance, less property owners affected - OR 505-2 west all the way to intersect A130-2 along Hyw "C". M10-2 is solid woodland much of which is enrolled in managed forest tax law to protect area from development. Please consider running your propose corridors along existing roads & corridors or Marinette county forest land. Thanks for letting me express our thoughts - Again there is no airstrip south of Athelstane & above suggested route would be less distance, less costly & affect less property owners.

This is the 3rd or 4th comment card we have sent in. It seems as though we have absolutely "No" say or input on your projected routes your latest route still shows M10-2 going through 3/4 mile of our private deer hunting property its taken my wife & I, 30yrs to pay off. No input at all - None! I can't understand why you must run East & then North with M10-2 to intersect with C510-2. Why can't you intersect C480-2 with 505-2 "west" then intersect A130-2 North to A135-2 & continue North. Another route that would not affect private land would be C480-2 intersect with C505-2 "west" 2-3 miles than North though Marrinette county Forest land to intersect P320-2 than west P320-2 to intersect with A130-2 & North. Why Why Why must you run project through private land East of Athelstane. Can't you consider existing routes with new larger towers, or run your lines North along Hwy 141. Please respond or acknowledge our concerns.

I am unable to attend the meeting.

My property is a tree plantation on County Road A South of the C A intersection. It is on the east side of A.

Would the new power line supports replace the poles that are now on the easement?

What kind of supports would be used? How high would they be, what material and what style?

Would you ask for a wider easement?

Thank you for your consideration.

Sincerely,

Helen D Muirhead

I am a property owner in Segment P390-2, Town of Athelstane, where one of your preliminary routes is proposed. I own nearly 90 acres of land, of which approximately 50 acres was planted in 1963, the year John F. Kennedy was killed, which makes it almost 49 years old. I have cut and trimmed this plantation twice under the supervision of a licensed forester. Now, after all these years it will soon produce beautiful decorative red knotty pine lumber for my later years and for my children and grandchildren.

If your route goes through this plantation, and I hope it does not, I will hire a licensed forester to go through to check all the trees and estimate how many board feet of this plantaion I would lose after all these years and all my hard work and time. If that power line were to be moved East over 2-3 forty acre parcels, it would be in a more desolate area and not overly people inhabited.

My family (children and grandchildren) and I spend a lot of time hunting the property as we have a year-round home across the road on Lost Lake. We also fish year around in the nearby lakes and streams. We also ride snowmobile on the property in winter and ride our UTV in the summer.

I do not want this power line to go through my property and destroy a lifetime of work and pleasure.

Thank you for your consideration and time.

I own property in Marinette County in the Town of Athelstane where your preliminary route Segment P390-2 intends to go. I have 30 acres next to my brother, Kenneth and my nephew, Randy Gajeski. I estimate that a little over half is in the same Red Wood Plantation planted in 1963, next to my brother Kenneth. If your route goes through this land, and I ask that it does not, I will also hire a licensed forester to estimate the loss of decorative red pine.

I have a year-round home on the property and spend a lot of time in the woods hunting and fishing nearby lakes all year.

I feel if the line were moved at least 2-3 forty acre parcels to the East, it would be in a more desolate area. I do not want these power lines on my property.

Thank you for your time and consideration.

WE PREFER NOT TO HAVE THE TRANSMISSION LINE RUN ACROSS OUR PROPERTY. WE ARE PUTTING A MANUFACTURED NEW HOME ON OUR PROPERTY ON SCHWITTAY LANE IN ATHELSTANE IN LATE MAY WITH SITE WORK ALREADY COMPLETED AND DOWN PAYMENTS MADE. WE WOULD REALLY APPRECIATE IF THE TRANSMISSION LINES WERE NOT ON OUR PROPERTY.

Dear Bay Lake Projects Representative, 10-14-12

I am writing to voice my concern and to respectfully object to the proposal for segment P380-2, which would destroy a significant portion of forested land on the small, secluded family property in my name. We have managed this 40 acres as a prime hunting and fishing destination, with the mature forest and Eagle Creek providing a remote, natural setting for generations of our family to enjoy. This short segment, crossing Kunkel Lane on the border of Athelstane and Stepheson, in Marinette County, would run parallel to existing powerlines in an already established corridor, A125-2. It is inconceivable that the existing corridor couldn't be used - residents in the proximity of A125-2 are clearly aware of that power line segment. Land owners nearby are in disbelief that you've proposed bulldozing a new corridor a half-mile west! Please consider, in making your decision, the opinions of the landowners with small plots, who'd be enduring the most significant impact of P380-2. Thank you.

Sincerely,

Jonathan Gross

Gentlemen;

Today in Green Bay I attended the meeting ATC provided for all the land owners regarding the high line you are proposing to put through in Marinette County. I did get a map of the three possible locations where the line will be placed. The people ATC provided in assisting the land owners were very courteous and friendly but with all the questions I had, not many were answered.

Our property of forty acres which is in the town of Athelstane just north of Kunkel lane shows tentatively Segment A125-2 will cross the western boundary. In speaking with the neighboring property owners, we are unanimous in our decision, "not to have the high line in that area".

The forty acres I purchased in 1984 and have now deeded to my children, is a hunter's, fishermen's paradise. Also there is a class A trout stream with native Brook Trout that runs north and south through the middle of the property and continues to the south through existing property owners. We believe the DNR will have great environmental concerns and take action with the planned high line in this area.

Fifty years ago one could purchase forty acres of land for about four thousand dollars or back taxes. In 2008 forty acres of land was selling for one hundred thousand dollars. If there was lake frontage, river or stream running through that forty, it was three thousand dollars an acre. We recently built a new cottage and steel garage on our forty. We feel and believe our property to be valued at three hundred thousand dollars. Putting a high line on the western border of our property will greatly devalue the existing property. Should the high line be approved, and we hope not, and run through the western border how will we be compensated. Should we sell that property ten years, 25 years from now, with the high line in place, the property will always be greatly devaluated. Your people have crunched numbers and know what the high line will cost you. That high line will be there for over a hundred years and you have fairly good numbers to believe what your profits will be. In time to come a one time buy out will never replace the value of our property.

My son's and I join the many property owners in the SPECIFIC AREA with anger should Segment A125-2 be implemented as you indicate.

Hello, I own property in Marinette County and my neighboring land owners attended a town hall meeting in Green Bay regarding the relocation of the high line.

One of the proposed high lines (Segment A125-2) would invade my neighbors' and our property, and we strongly object and oppose to this proposal. Over 30 years ago, my father wanted to purchase property in northern Wisconsin where he used to hunt and fish as a child. He researched many properties. He ultimately purchased our existing location after he spoke with the existing connecting property owners. He wanted to understand their current and future intentions with their own land just to make sure we all had the same vision. Over these past 30 years, we have become a tight knit family; sharing our land together hunting, walking, riding ATVs, and fishing on each other's property in peace and harmony. The proposed high line will cut directly through two of our neighbors' properties, through a great portion of the west corner of our 40 acres, and right over the Little Eagle River (a class A trout stream). The proposed high line will create two dilemmas; first, dramatically decrease our neighbors and our property values, and secondly, destroy the preservation of the forest land that my neighbors and my father worked so very hard to maintain.

At the Green Bay town hall meeting, an individual said that one reason for the new proposed routes is because the property owner whose land butts up against the existing high line don't like viewing the high line or the traffic that it create. However, they knew this would be the case and bought the property factoring in these issues. A perfect example is that if I bought a house that butts up against the highway, I am fully aware I will have to adjust to the sounds, smells, and sight that results from the highway. If I buy a house two miles away from the highway, I do not expect that a corporation or government to re-route a new highway into my backyard without exploring a more cost effective measure. This is especially disturbing when the re-routing is partially the result of the aforementioned property owners do not like the highway in their backyard.

I am perplexed and confused as to the logic of cross cutting tens of thousands of trees that create the very essence for owning property in the Wisconsin north woods especially when the existing high line and highway system creates a perfect foundation. By utilizing the existing high line in coordination with the highway system, you will save time on unnecessarily eradicating thousands of trees allowing you to complete your project in a more efficient manner, which, in turn, will save your corporation tens of thousands of dollars.

Finally, if this proposed high line is executed, how are the affected property owners be fairly compensated? Are you going to pay us for the wood you take from our property? Are you also going to pay us rent for the time you are on our proerty creating the high line? That may sound funny, but I can't see any of our neighbors, which is a main component for my father purchasing the land in the first place. A one-time payoff will not fairly compensate us for the alteration of our property landscape. In essence, we will own less than 40 acres. How much less will be determined how much of the high line impedes onto our property, which will devalue our property even more. Furthermore, the one-time payoff will not factor in the short and long term effects on the Eagle River, and our cottage skyline view, which would include a view of 200 foot high line poles instead of 30 year old oak, balsam, and jack pine trees that my father planted. We, the property owners, need to have a legal and legitimate voice and, as a result, should have the final input on proposals that will ultimately affect the integrity of our properties; not the Board of Directors of a corporation or a government employee. There has to be a more logical solution (use existing high line foundation or use the highway grid) that is much more cost efficient and environmentally friendly than what was presented to us at the Green Bay town hall meeting. Please consider exploring and investigating these options before it's too late.

Thank you for your time.

Sincerely

Subject: Power Line Project

I have a property in an area under consideration for power line installation and have concerns about the impact to my property. I would prefer to have the power lines bypass my property. I built a house in the middle of our property 2 years ago and if large power lines run through the property I am concerned about the health impacts of being near power lines as well. What say will property owners have in proposed lines? Our property is 40 acres located on Schwittay Lane just east of Hwy A and approximately a mile south of Athlestone. Any additional information you have or a timeline on additional information would be helpful. Thank you,

Andrew Heistad

We have property on Lost Lake near Athelstone. We've received letters that our property is on a preliminary route and may be affected.

I don't understand why you have to use lake front property. The power lines are now running behind our property behind the road. Why couldn't you use the land (which seems to be open fields) running on the other side of the power lines?

You will be destroying the trees that give lake front property value. You could even insist that the cottage be taken down. We are stuck in the middle because you won't buy our land, but will devalue it!

(1.) Line would cause the loss of approximately 1/3 of our large trees on property. (2) Don't understand how the D.N.R. will allow line to go through wetlands on property. (3) Very concerned about safety concerning the landing of airplanes on landing strip on property. Used frequently by out-of-state relatives. (4) Previously owned property near a pipeline - sold because of noise from ATV's, dirt bikes, etc. using that area for a race track. We already have noise in summer due to the race track that is located nearby - with noise on both sides, finding the peace and quiet that we long for at our cabin would be impossible! (5) SECURITY!! Safety and security would be lost with the line coming that close to our dwelling! Expense would make it impossible to fence our property to prevent this. (6) Health issues a big concern also! As a cancer survivor, having the line this close, would cause many concerns for the health effects it would have! (7) Loss of resale value! Question?? Why can't you follow existing route in order to save trees and wetlands?? We've heard mentioned that there is some type of "sensitivity" involved. What does this mean??

Comments:

I own property in the segment corridor P 390-2.

Concerns: One of these preliminary routes would split our 4 40 acre parcels right down the middle. We feel that doing this would jeopardize our land value and eliminate the reason we purchased the land. We have owned this land since 1989. It would also decrease any potential future sale because of the transmission line. This property is the Thilamny Tree Farm and if this line went in, we potentially could lose profit and jeopardize the natural landscape and animals that reside.

They have 4-40 acre sites and they are under a Forest Management Plan-does not let building so we need to check on what we can build in that area.

My family owns property in the segment corridor P-390-2, 4 - 40 acre parcels. Dale Lueskow is my father and Linda Taylor is my aunt. This is an area you are proposing to install power lines. I feel strongly about this not happening for the following reasons: this would feel very invasive to me. I enjoy the land for its beauty and serenity. I've grown up visiting my cabin and seeing the wildlife. A power line through the middle of our land would destroy this for me. Please consider my/my familys feelings towards this. Thank you.

RE: Bay Lake Project

TO WHOM IT MAY CONCERN:

I am part of the family that owns property, four (4) forties (40's) off of Hahlweg Road, where one of your proposed corridors for a transmission power line is proposed and will run right through the middle of our property! This is of GREAT concern to me!!

The purpose of purchasing this property was for FAMILY hunting, gatherings, plantings, recreation, hiking, berry picking (which in good years, is great) and just to enjoy the peace and quiet of nature. We certainly do not want to hear the buzz or crackle of a high power transmission line!

There is no way you will ever convince me that there are no adverse effects of a high power transmission line being on our property.

Further more, there are more conducive routes to consider than splitting our property in half! There already is an established corridor approximately one (1) mile from our property.

In addition, this certainly would greatly diminish the value of our property!! If sometime in the future, there would be a reason to sell this property, I don't believe you can compensate us (after time) for the increased value of this property. Just the opposite, if the power line would split our property in half, the land would probably be difficult to sell, even at a reduced price. It is not just the present value of the property, it would also effect the future sale price.

Lastly, we are in a Forest Management program, which does set guidelines, as to what we can or cannot do with our property. In addition, we are a Tree Farm and would experience a large loss of income.

Sincerely,

Project Team: This is in regard too segment P390-2 DALE LUESKOW - LINDA TAYLOR Land. (my neice & nephew) We have worked hard on this land to make a productive tree farm & hunting property. I believe there are better lines you could take for this project rather than defaceing & lowing the value of this property.

Looking at the proposals I think the 141 route would be the shortest and only take 1/2 the land because you have have easment on 1 side already? Thank You for your time

I OWN PROPERTY ON W11407 HAHLOWEG RD, ATHELSTANE SEGMENT P-390-2 (V7). THIS PARTICULAR AREA HAS DWELLINGS ON EVERY LOT. SOME PERMANENT RESIDENCES AND OTHERS ARE COTTAGES/SUMMER HOMES. TRYING TO PUT THIS TRANSMISSION LINE THROUGH THIS AREA WITH ALL THESE BUILDINGS DOES NOT SEEM LIKE A ECONOMICALLY PRUDENT COURSE. IN LOOKING AT YOUR MAP OF THE PROJECT AREA, IT APPEARS TO BE ANYTHING BUT FEASIBLE. AN EXISTING LINE TO THE WEST OR PARLELLING HWY 41/141 SHOULD BE BETTER CHOICES.
THANK YOU.

Comments:

It appears that our property could be impacted by one or more of the proposed lines. We do not know exactly how. We are currently planning on selling the property but do not know how to disclose the impact and or the timing for knowing with certainty what the impact will be. In any case we feel it will have a negative impact on the property value. Its' value has already been negatively impacted with the presences of an exsisting 350kV line. The current maintenace of the right of way has not been satisfactory. It was recently "trimmed" with branches left lying on the ground. The property is in the name of Dorinda Miller.

Comments:

It appears that our property could be impacted by one or more of the proposed lines. We do not know exactly how. We are currently planning on selling the property but do not know how to disclose the impact and or the timing for knowing with certainty what the impact will be. In any case we feel it will have a negative impact on the property value. Its' value has already been negatively impacted with the presences of an exsisting 350kV line. The current maintenace of the right of way has not been satisfactory. It was recently "trimmed" with branches left lying on the ground. The property is in the name of Dorinda Miller.

You need to convince me the region where our cabin in the woods is located NEEDS this addition. The static sound from the wires of current voltages is offensive/disturbing - I wonder what it does for birds. I am against the whole idea at present, but will attend mtg. to hear more.

To who it may concern: Fire, ATV trafic, dirt bikes and four wheel trucks not to mention bear hunter trucks! The power line was put right up to our property line and the whole 120 acres. We have property in the Marinette Co. Forest and have been here since 1951. We have no electricity (far too expensive to bring it in) but we do have all the problems bringing it to other people - are the problems none of the benifits!

Comments:

Concerns: On east side of county A- there are lots of dwellings while on the west side it is less densely populated. A lot of disruptions.

Just completed building new structure and also have an 80 year old cabin plus we have a brand new shop and am concerned about property values. Also concerned with stray voltage because even if it fits, still extremely close. Myself and family are extremely against this route and project because it will destroy the pristine property and area. If Marquette wants juice, have them get it from lower Michigan.

I own approximately 1/2 mile of your easement for the 345 KV line north of County Road C. If you select this corridor for your new transmission line it will affect my property as follows. The West side of the existing easement is tree covered. The East side of the existing easement is tree covered plus contains the following bldgs, within 105' of the existing easement. 1 1326 0' residence, 1 24' x 24' shop, 1 14' x 20' storage shed, 1 22' x 32' garage with 2nd story living quarters above and 1 14' x 16' screen house.

Less than a mile away from project area P390-2, there is an area, where the land has been cleared and power lines exist. Why clear existing land, near residential and lake property, when this area has been cleared and the lines are already in place. It would make more sense to widen the existing area, and add more lines using a larger structure. The distance for this project area (P390-2) is not that great, and would be just a short run. It would also be more cost effective for installation and maintenance. Myself and neighbors are totally against power lines crossing the properties in question. Please make a good choice and locate the power lines away from the residential and lake properties.

I would like to know if my property on Davis Rd. Athelstane WI will be involved with this project? I would also like to know how wide of a path will be cleared near my property line? and if the installed lines produce "electtic" noise. and who to follow up with directly with further questions.

P390-2

The need for a new line (P390-2) thur the area you proposed is not a good idea at all. This private Land, that should not be invaded by ATC, when we already have two lines already 15 to 20 miles apart, using that area be a better plan. My information I recieve, is that only one Line, is being needed so present site should be enough. Also I was had learned that undating the power plant you want to close, would be cheaper than running new line. Sounds like using common sense wasn't in your plan

Thank you

I am very sensitive to the electric. I can't use a computer, no microwave at our house. We have to stay away from area's in Green Bay. We moved here as I was so affected in Green Bay. Ron retired a yr earlier as I was dieing - I have a 2001 pacemaker, had by pass heart surgery 1996. My heart is 1/3 working. The linew will be hazardous to my health. I have a stint in my heart valve. Here, I am improved from living in Green Bay, please keep the lines away, our bedrm is on the west side next to where the lines would go. Some sytems, pain, dizzy, lite headed, weak, again dizzy heart acts up, fast, skips beats. We try to stay home as much as possible where its best for my health.

Our preference would be to keep lines from encroaching on the Lakeshore (Gilas Lake) and to know what the concerns are when lines cross over living spaces.

We understand that new lines are a part of growth & progress, but knowing up front how that effects health, property values & the rural communities it passes over will be an important part of our decision to support or fight proposed plans & routes.

Don Bushell

Comments:

We own a dairy operation on the proposed P290-2 segment. The current proposed area runs over where our calves are and is close to our freestall barn which houses our milking cows. And we are concerned about stray voltage and the effect that they will have on our livestock. We are also concerned about the crops along the existing line along segment A90-2. We currently grow alfalfa, corn and soybeans and near the lines it grows very short. We also have quite a few children that live in the effected areas that would have the line go very close to where their houses are currently located

In regard to the transmission line that is being proposed through our area. I have concerns about this if it goes through my property. Wisconsin Public Service already has an easement behind my house and I don't want to have another transmission line so close to my home. Also Hwy 141 has easement in the front of my house so I'm already paying property tax on two pieces of my property that I'm unable to use. it is not right that I should give up anymore of my property.

Sincerely,

Daniel Dolata

P260-2

We do not want the Bay Lakes Project to run through our property. Our house is located just east of the center dot on the print-out we received from your representative. Also, there are wetlands on the property (bogs east and west of center, and a cedar swamp east of center.

A high-power electric line would be unhealthy for our family and would greatly devalue our property.

Sincerely,

Michael and Sandra Everard

P260-02

Re: P260-02

As we stated in an earlier correspondance, we do NOT want the Bay Lakes Project power lines to run through our property. According to the most recent version of where the lines would run, they would be going right through our living area. Our house, out buildings and picnic area are in its proposed path. We feel strongly that having high-power lines that near would be very unhealthy and would devalue our property as well.

Sincerely,

Michael & Sandra Everard

1) Why would you want to cross my property (P300-2) when we are in the foothills of where the DNR had a fire tower on the next 40. Our property going from north to south has 4 valleys and 5 hills. The height from the valley to the top of the hill on some of these hills is over 60 feet. The distance from the highest to the lowest point on my 63 acres is 172 feet. Then continuing north from our property in about 1/2 mile, you have a pretty good 5.2c swamp.

2) We find this a bad intrusion on our property as this is all deer hunting property.

3) Our property has mostly maples and oaks that are 20 to 30 years from maturity.

Comments:

Our property has been identified as possibly being impacted by this project. Obviously we are concerned about what exactly this means and what the potential impact could be. Our property is located on a very small lake that is surrounded by mostly vacation homes. Would any work in this area avoid lake property in an attempt to maintain its value? Would it closely follow existing roadways in the area?

In regards to Segment A95-2, we do not want our land used as your proposed corridor. We only have 2 acres that 18th Rd. is already taking a portion on two sides because we are on the curve. We have improved the land by an established road into the woods and electricity. At this time, it is used as our "woods get away haven." We enjoy the woods and nature so much and don't want to see it taken up by more clear-cut and power lines. We have invested in spraying the woods for gypsy moths and are trying to save what we have for future use as we plan to build. We would prefer you use the corridor along highway 141 (first) Or, the land already being used east of 18th Rd., and our property.

I am commenting on County Rd P the C397-2 corridor. There are irrigation swivels on the portion that runs N.-Rt South on the East side of Cty P & there is a girl scout camp that was sold & subdivided & there are houses being built. Again I ask I why deface & devalue peoples property use existing corridors! They are already there and those peoples property is already ruined, defaced & devalued, why deface, land & devalue even more property. It is also more cost effective to utilize existing corridors, that is common sense, lets please use some. Any questions please feel free to call me.

There are existing high lines to the east of Hwy 141 & to the west of Cty Rd S. Utilize them instead of destroying more farmland & woodlands. Can you use the pipeline land?
Our business is short of expansion land as it is, we can't afford to lose any more land.
It would be a detriment to the neighboring farms to lose previous land. People are struggling enough as it is.

I am located 2 blocks off Hwy. 141, & a substation is right across the highway. We had one electric line running down our road on the opposite side of where I live. Then several years ago they ran another line down the other side of our road & on my property against the wishes of everyone on our road. I do not want any more lines running on or near my land. There is too much negative electric energy there as it is. I believe that is not good for people & is probably affecting my health & energy. Another lady who lives on our road has expressed the same opinion to me.

I want to know exactly where you plan to run the power lines & when. Will it be on my property or on Schlag's property across the highway? If you are not considering putting them on my property, I'd appreciate knowing as soon as possible. I desperately need money, & want to sell the property within the next 2 years, & I can't wait until the last minute. If I knew for sure that you would be putting the poles on my land, & paying me for them, I could hold off on selling the land for awhile, but I need to know.

I'M SURE BY NOW YOU'VE GOT AN OVERWELMING "NOT IN MY BACKYARD" RESPONSE, AND QUITE FRANKLY AS FAR AS I'M CONCERNED THIS JUST A "FEEL GOOD" PLOY IN BELIEVING WE COULD MAKE A DIFFERENCE IN THE OUTCOME. HOWEVER, IN THE END, THE ALMIGHTY DOLLAR WILL WIN OUT AND WE WILL LOSE. THERE IS NO POSITIVE BENEFIT AT ALL TO US. WE WILL BE IMPACTED NEGATIVELY ON THE RESALE VALUE OF OUR PROPERTY. THE LOSS OF OUR BEAUTIFUL TREES WE PAID TOP DOLLAR FOR. THE NEGATIVE IMPACT ON THE WILD LIFE AFTER YOU RAPE THE LAND OF THEIR HABITAT. AND MOST IMPORTANT TO ME THE NEGATIVE PHYSICAL IMPACT THE POWER LINES HAVE ON ME. I LIVE IN TOWN NEXT TO A MILL BISECTED BY THE RAIL ROAD AND POWER LINES. WE BUILT UP IN BEAVER TO GET AWAY FROM THAT AND NOW WE'RE GETTING IT ALL OVER AGAIN. I CANNOT HANDLE THE NOISE AND THE HAIR STANDING ON END ON MY BODY. PLEASE, PLEASE CONSIDER BUYING US OUT AT THE VALUE IT IS NOW. WE CAN'T TAKE THE FINANCIAL HIT YOUR COMPANY IS CREATING FOR US. P.S. WRITING THIS BY THE WAY DIDN'T MAKE ME FEEL BETTER. I AM SICKENED AND SADDEN BY THE WHOLE THING.

Subject: Bay Lake Project

Attached letter regarding section P290-2 of Bay Lake Project Area 2.

Thomas Jagielo

January 6, 2013

Project Manager,

We write in strong opposition to proposed section P290-2 of the Bay Lake Project and the devastating effect it would have on our 9 acre property and home at W10909 W 18th Rd. We invested our life savings in 2007 to purchase our ¿dream ¿home and have spent the past 5 ½ years renovating both dwelling and property. This project would effectively destroy both our dream and our investment.

We purchased specifically for what this unique parcel and area offered. Murphy Creek is a Class 1 trout stream and the surrounding land is a designated DNR ASNRI. Our property is a relatively narrow parcel that is fully wooded and has over 1,000¿ on Murphy Creek as its western boundary. The land itself is home to countless number and variety of wildlife, while Murphy Creek, from Nelligan Lake south to Murphy Lake, is a natural flyway that is heavily trafficked by geese, ducks, loons, cranes, herons, eagles, ravens and numerous other birds. This is why we chose this property and this area.

Our property is a near pristine parcel that would be ruined if dissevered by construction of P290-2. Our land is not tillable; it is wooded, with steep slopes leading to Murphy Creek. The monetary value of our land lies in the exceptional natural beauty and wildlife habitat provided by Nelligan Lake and the Murphy Creek basin. Clear cutting 30% of our acreage and constructing a large power line structure through this scar would devastate both the land and our substantial financial investment in it. This is not an acceptable route for Bay Lake Project.

I own property by segment - A 90-2. If it goes on the west side, it will be right next to my building's and very close to my home. Would prefer it to go on the east side of existing line.

We are very concerned about the proximity of the power lines to our buildings. We are aware of the negative effects of living near high voltage lines. This will also interfere with property we rent out. It is not that we do not understand the need for progress, we are just concerned with the price we may have to pay for it.

I live in the P290-2 Segment and we have have a Dairy Farm if you were to run the transmtion line through there you put us out of Business the crops don't grow well under the lines and if you put them over are calves and Dairy cattle they won't grow and milk either. Why don't you place them were the damage is done already instead of Damaging more farm land. Its hard enough to make a living as it is.

To the electric gods for consideration of having mercy on us.

Potential corridor (C397-2)

I understand the need for progress but, when it comes to private land we feel violated. It doesn't feel like the land of the free but more like the land for others to take. You see back in 1963 the highway dept. took a strip of land from the east end of the 30 acres we own for a fair market value of \$245.00 with no debate. Now there is also a 33 foot easement on the north side of our 30 acres because of a land locked 40 in back of us. Now if you run a line thru our 30 acres, our land will have very little use or value in which we will still be paying the same high taxes and unable to use as we wish. We already put a 200 amp service on our land with intentions of building our retirement home. It's like being robbed legally by twisted laws that we have no control over. This is more like a dictatorship because no matter how valid our comments are, you can still do whatever you feel is best for your business in which we don't prosper except for a unfair market value. The way we see it the lines should run in one of the same routes that are already being utilized either up hwy 141 or the one from Morgan, Wisconsin to Plains, Michigan. From a happy landowner who could become a disgruntled landowner.

In regards to your potential corridors for the new power lines, I feel utilizing the existing line along Hwy 141 would have a lesser impact on the environment & natural beauty of N.E. Wisconsin. We own 40 acres of Cty P west of Crivitz which we purchased from my original family homestead. For the past 10 yrs we have, along with our 4 sons, planted thousands of trees & spent countless hours restoring the natural habitat for recreational & hunting purposes. It would be extremely disappointing to have all that commitment & effort destroyed & devalued.

Thank you for your consideration

I AM VERY CONCERNED AND DISAPPOINTED TO HEAR YOU ARE CONSIDERING MY LAND FOR YOUR TRANSMISSION LINES. I HAVE ALREADY HAD LAND TAKEN FROM ME WHEN THEY PUT THE ROAD THROUGH MY PROPERTY AND NOW YOU WANT TO TAKE MORE, WHICH FRUSTRATES ME, PLUS I ALREADY HAVE AN EASEMENT ON MY PROPERTY WHICH I HAVE TO PAY TAXES ON AND NOW THIS. THAT MAKES 3 AREAS OF PROPERTY TAKEN FROM ME. I HAVE A PRIVATE CAMPGROUND WITH RUNNING WATER AND ELECTRICITY AND A PAVILLION ON MY LAND, WHICH WOULD PROBABLY BE AFFECTED BY THE LINES AND I HAVE LIVED HERE ALMOST 60 YEARS. AND MY FATHER BEFORE THAT. IN FACT MY FATHERS ASHES ARE SPREAD ON THIS LAND AS WELL AS MY COUSIN, AN UNCLE AND AUNT. I FEEL THERE ARE BETTER OPTIONS FOR YOU TO RUN YOUR LINES, FOR EXAMPLE PARKWAY RD. OR HWY 141 ARE BOTH STRAIGHT LINES FROM POINT A TO POINT B, WHICH SEEMS TO MAKE THE MOST SENSE AND BE THE MOST ECONOMICAL ROUTE TO TAKE. I ASK THAT YOU PLEASE CONSIDER AN ALTERNATE ROUTE, BUT IF COUNTY P (C397-2) IS YOUR ONLY OPTION I SUGGEST THE FAR EAST SIDE OF THE 3000 FT LINE ON THE MAP AS IT IS THE LEAST POPULATED AREA. THE WESTSIDE OF P HAS MANY HOMES WHICH ARE ALL YEAR ROUND RESIDENTS. THE EAST SIDE NOT ONLY HAS FEWER HOMES BUT THE MAJORITY ARE OCCUPIED ONLY A COUPLE WEEKEND A YEAR. THANK YOU, FOR LETTING ME VOICE MY OPINION. William Klatkiewicz

Richard owns property on segment P 260-2 Area 2 North of Oconto Falls
Home is about 100 feet from lake. Wetland all around. Murphy creek feeds into lake- it's called Gross Lake. It is considered flood plain. Does not want property effected. To the west of 64- that's all high land. Would prefer route to stay on high land-
Also has health and safety concerns.

Property affected: W11571 18th Rd, Pound, WI

Phone: 920-419-0891 or 920-419-2930

Email: bethlaut@hotmail.com Yes, I want to receive project updates and information via email.

We are strongly opposed to the route that is proposed along A95-2 that affects our and neighboring land that is heavily wooded with prime hardwoods ¿ red and white oak and maple trees.

The hardwoods in our area have been under stress for the last several years with oak wilt and an infestation of gypsy moths. It is critical that we preserve the hardwood that we have remaining. Drive down Parkway to see first hand the skeletal remains of trees hit hard by gypsy moth and oak wilt. We have been battling the gypsy moths and have made some progress in our fight. Neighbors have banded together to hire (at our cost) aerial spraying of our woods for several years to kill the gypsy moth caterpillars and preserve the integrity of our wooded property. Three years ago the caterpillars were so thick we burned up a shop vacuum vacuuming them off the trunks of trees. This past year, I didn¿t see one caterpillar. That¿s progress, and we were proud to have saved our woods, which is home to us, deer, turkey, bear, porcupines and many species of birds and wildflowers.

Your preliminary route through this wooded area would be devastating. It would strip the front of our (and neighboring) property of hundreds of mature trees. We are not talking about scrub oak and pine, we are talking about huge oak with trunks up to 30-40 inches in diameter. We bought this property as an investment. If I wanted to have my retirement home on a barren lot, I would have invested in a cornfield at a much smaller cost. We used an old existing road to build a driveway to the rear of the property to the cabin we built in 2003 only cutting select trees when absolutely necessary. The integrity of the woods is very important to us and the value of our investment.

Please, please don¿t allow another scar along this quiet Northwoods road. We already have the large existing poles (in red on your map) just across the road from us. Further cutting would be raping that land that already has been blighted by a past power project, and would disturb the flora and fauna that call this woods home.

I have attached some photos of the woods in our neighborhood along with photos of the existing poles and how it has affected our neighborhood in the past.

Sincerely,

Beth & Jeff Lautenschlager

Comments:

I have a 5 properties that are directly affected by this proposed line. We are contimplation putting in center pivot irrigators on the properties that would give us an additional \$600/acre of revenue for our dairy farm with the same inputs. These systems do not work if powerline are installed. The effected area would be approx. 240 acres. The economic impact would be a loss of \$150,000/per year of net income. One of the properties that we own A620-2 is a potential dairy site for a new dairy facility. The facility would have \$18 million in annual sales. This dairy facility requires a 60 acre uminterupted footprint. If the proposed line is placed here that dairy facility would never be built. We were not against replacjng the 6 year old line that is currently existing provided that it is built in the exact same place as the existing line.

Bay Lake Comments:

My name is Barton Meyer and my dairy farm is located on County P in the Town of Beaver on one of the proposed routes for the Bay Lake Project. I am writing to express my concerns about the transmission lines you are proposing to run through my property.

First, I would like to give you some background information that will hopefully help you to understand more fully my concerns. I am a third generation dairy farmer who lives on and works this farm with my wife and two children (ages 13 and 11). In addition, my father (the second generation) contributes to the farm operation primarily as a machinery operator in the fields. In November of 2010, we were devastated by a fire which destroyed our barn and milkhouse, our feed storage and killed most of our animals. It is nearly impossible to describe how much loss my family suffered at this time. After much consideration, my wife and I decided to rebuild with the future in mind. We spent over a million dollars in 2011 modernizing our operation, and therefore, have made a considerable investment for a small dairy farm milking under 100 cows. I am sure you can understand how concerned we would be at anything which would threaten the health and economic profitability of our farm.

From what we can tell from the route you have proposed for the new transmission lines, the ATC wants to run a high voltage line through the middle of our farm across two fields and a strip of woods as well as along the property lines of two other fields. The power lines would be located only about 200 yards from the back of our new barn facility. We are concerned with this location for a number of reasons.

First, our farm would be literally cut in half. We would not be able to travel from the southern to the northern half of the farm without crossing these power lines. Their location could certainly hamper any attempts at expansion in the future. That is very troubling to us since we have already spent so much to rebuild this farm with future expansion in mind and the fact that our son has expressed much interest in continuing the farming tradition in our family. As important, I am extremely worried about the health and safety of my family having to travel under these high voltage lines continuously to conduct farm operations. Of the utmost concern is my father who has a pacemaker. It is unknown how the electromagnetic field of these transmission lines would affect his health over a longer period of time, if it doesn't kill him immediately.

Secondly, we have a spectacular view from the back of our new barn facility (enclosed photos). It includes a valley leading to a large hill upon which sits the Beaver Fire Tower. To the east of our barn, we can easily view 10 miles in the distance. There are a lot of hardwoods in these views, and I must say, the scene in the fall is comparable to those one would find in the state of Vermont. Honestly, much of the view along County P on your proposed transmission lines route is of pastoral farm landscapes. Our family believes it would be a tragedy to pollute these rustic landscapes with obtrusive transmission lines.

However, we realize that your company is not overly concerned with aesthetics so perhaps you might understand a more economic stance. The view from our farm would offer us a unique

Bay Lake Formal Comments - Additional Comments by County/Municipality

opportunity to supplement our farm income with tourist dollars. At a time when small farmers are being swallowed up by large agribusiness, it is imperative that this farm maintains all its income earning potential. There are any number of business opportunities for a small farm with a spectacular view to engage in to bring in tourist dollars. But let's be realistic, no one is going to drive out of their way to visit a farm whose view has been polluted by power lines. One drives to the country to see pristine landscapes, not urban sprawl. My family was counting on tourist dollars to make up the difference in our income if problems arose for us in the future. Already, land rent has nearly doubled in the past year with no end in sight. There may be a day in the near future when a small farmer may only be able to afford to farm the land he owns. We would need the extra income tourism could provide just to finish paying down our mortgage. It would be a joke to think that the pittance your company would offer for an easement would even begin to compensate us for the tremendous economic loss my family would suffer. I believe my family has endured enough these past couple of years, and at this point, the thought of your transmission lines cutting across our property is, frankly, unconscionable.

The third factor of concern is that the proposed location of the transmission lines would run through a strip of woods which is highly erodible ground. This strip of woods sits at the bottom of a larger hill which is strip cropped to prevent runoff, but with climate change we have seen more and more storms with 3 to 4 inches of rainfall, and therefore, there is much more runoff from this hill. This strip of woods with its immense tree root structure is capable of handling such runoff, but it would prove troublesome if enough trees were removed. This strip of woods was never cleared for farming in the first place because it is highly erodible land. I do not believe a grass waterway would be sufficient to hold the ground in place.

Fourthly, I am also very concerned with stray voltage as a problem with the location of the proposed transmisison lines so close to our new barn facility. At some point in the rebuilding process my family would like to give our animals access to pasture, but we are afraid once our animals step off the equipotential grounding of our freestall facility, they will receive a shock to their systems. My family has invested too much to take any chance with cows being sickened by stray voltage.

Apart from the exact location of the proposed transmission lines, there is one other concern I must mention. I am worried about the transference of weed seed and disease from my neighbors' fields to my own. I know your proposed route will cross fields which are infested with velvet leaf. I have spent many hours handpicking this noxious weed to keep it off my property and I have been very successful. It deeply concerns me that your equipment could drag countless seeds across my property. There is also a very good chance your equipment could bring Johne's disease to my fields which my animals could contract. There will need to be some sort of protocol put in place before your company's equipment could be allowed on my property.

Well, I hope that now your company has a better understanding of my concerns about the route of your proposed transmission lines through my property. I ask that your company gives these concerns due consideration before any final decisions are reached concerning the routes of the Bay Lake Project. Please keep me informed of any new developments.

Sincerely,
(signed)
Barton Meyer

First off, I would like to thank you for listening to our questions and concerns. We went to the open house by word of mouth and did not know what to expect. All of your reps were very polite and helpful. We think you are going about this project correctly. As far as concerns, 1) we don't like the idea of ease of access for trespassers to enter our property. We own a 40 acre parcel that only has access through our relatives driveway right now, if the route came through our land it would "open the door" for unwanted people. 2) Loss of woodland - this is prime habitat for wildlife. Putting a highline would severely change that. 3) Stray voltage - magnetic field. We are concerned about this (did receive the EMF handout) along with our farming neighbor. 4) If there already is a line going from point A to B, why not just parallel the existing one? PARCEL # P290-2

Thanks,

Roger Meyer

In Oct. 2007 WPS ran electrical from County Rd. P to my property on 11th Rd. It was at a cost to me of \$25,224.71. The line was put underground. This was a huge expense to my family but needed to be done so my retirement house could be built. Needless to say we are very upset at the prospect of having high tension wires visible from our property. We moved here from the Milwaukee area for the beauty and tranquility of the area. We feel it is being threatened.

Subject: proposed new power line route ..

We were unable to attend the open house on the proposed power line routes through Marinette County. We are strongly opposed to any power lines being placed any closer to our home than what already exists in close proximity. I am not sure why a new route would be cut through forest area disrupting animal habitats when a route already exists that is already cleared out, but if this is unavoidable after taking legal action we would not wish to live in the area. Although it is probably not an immediate health risk, (although the one neighbor who was living under the lines died about 3 years

after moving in from cancer) we would not be comfortable living with the stray voltage or the destruction of all that we value about the location of our home.

Thank you for your consideration,

Mr. & Mrs. Jerry Murley

I would like to see a map showing the proposed route of transmission lines in the town of Pound. Also someone has been trespassing on my property putting up blue ribbon for the tower lines. If this line comes up our property line, the tower line would be over our house. What gives a company the right to occupy private property? Why would ATC destroy private property when there are road right of ways to use, making it easier to maintain these lines? How wide are the structures? How high are these structures? How many circuits? How low are the lowest conductors. Who pays for the devastation of prime wildlife habitat, and the disruption of wetlands? If this line does hang over our house, who pays, or can even set a price on listening to tower lines crack, when we retire in that home? Who sets a price on quality of life, which ATC will destroy? Please respond to these questions by mail.

Jeff Ott

RE: BAY LAKE PROJECT -ATC

Good Morning, .

My Name is Jeffrey Ott. My family owns 80 acres of land located at 5200 39th Avenue - Pound, WI. (Town of Beaver, Marinette County), which is located in the Bay Lake Project area. We have owned 60 acres for near 20 years in which we built a home, including three out buildings, planted thousands of trees and created several food plots for the wildlife. Our plans included creating a wilderness home for retirement while using the land for hunting, vacations and family gatherings. We recently purchased an additional 20 acres adjacent to our current land. We have some major concerns about the ATC Bay Lake Project and how it will affect the wildlife and the surrounding environment, our quality of life, in addition to the health risks, and the impact it will have on our financial growth.

We are concerned about the effects on wildlife, specifically the aquatic life. Running a new transmission line will consist of a massive clearing of trees which will in turn alter the ecosystem. Without the trees the sun penetration would be intense and would dry out the plant life, change the swamps, and destroy the wetlands by depleting oxygen from the water and thus cause the death of aquatic life. In addition, the magnetic fields will affect any flights of geese overhead as they will not go near it.

Our environment is the most essential part of living. This is why we care for and preserve it for the good of ourselves and all living beings that inhabit our planet. The destruction of nature to extend the transmission line is not necessary. There is already a ROW along the Highways. Doesn't it make more sense to utilize this path instead? If we continue to destroy nature based on the "Needs" of the people, then there will be nothing left for the 'people'.

We are also concerned about the effects the transmission line will have on our quality of life. My wife and I have over 25 years of experience with the negative effects of high voltage Transmission towers and lines. We are both employees of an Electric utility so we are very familiar with the constant complaints from our customers regarding the loud buzzing noise because they think it is our facilities.

We have done much research regarding living near High voltage power lines. Apart from the obvious dangers of electrocution, there are other serious health hazards that are now recognized as occurring as a result of living near high voltage overhead power lines. The "Think About It" website says a study carried out by the Swedish government on 500,000 people over 25 years found that children living near high voltage power lines had four times the risk of getting cancer than in normal circumstances, while adults were three times more likely. The Swedish government now rates electromagnetic fields along with tobacco as a class 2 carcinogen. In March, 1990, the United States Environmental Protection Agency (EPA) moved to classify electromagnetic radiation as a Class B carcinogen.

Research into the psychological effects of living near power lines and towers was conducted by Pacific Northwest Laboratory in Richland, Washington in 1988. The study was done to determine if extremely-low-frequency (EMF) electromagnetic fields contributed to the number of depression-related suicides in subjects who lived near power sources. EMF was found to disrupt circadian rhythm cycles, and alter serotonin and melatonin neurotransmitter levels in the subjects studied. Serotonin and melatonin both play a role in regulating emotions in the brain. Researchers concluded that EMF may contribute to the onset of depression symptoms in some people.

There has been much controversy over the years about the health risks of living near power line. The evidence is becoming overwhelming that there are indeed risks of illnesses such as leukemia (particularly in children), cancer, brain tumors, high blood pressure, stress induced headaches, fatigue and immune deficiencies. The list grows as the years go on and the findings of studies accumulate. Another research study entitled, "Residential Exposure to Electric Power Transmission Lines and Risk of Lymph proliferative and Myeloproliferative Disorders: a CaseControl

Study" was conducted in Hobart, Australia by R. M Lowenthal. Researchers looked for correlations between the incidences of cancer in those who were exposed to high-voltage power lines. Results from the study found the risk of developing cancer increased by 106 percent for subjects who lived within 50 meters of a power source as compared to individuals who lived 300 meters from a power source. Researchers concluded that the results confirmed that a probable correlation existed between cancer and exposure to power lines. The results of the study appeared in the September 2007 issue of Internal Medicine Journal.

The financial impact would be devastating to us. The value of our land would no longer be what it is today or in the future. Should our children wish to sell our property once it is passed on to them the resale value would be worth less, in addition to the ability to actually sell the property. It is a hard to sell wilderness property with transmission towers and power lines running through the back yard. All of the money we have put into this property to make it the perfect retirement home and hunting property would be wasted. Not only have we invested around \$200,000 in this land, we have invested nearly 20 years building it to what it is now. As the dangers of living near high-voltage overhead power lines becomes known more widely and the results of research increase the validity of the argument that they cause health problems, people are becoming less inclined to buy homes near to them. The EM Watch website points out that awareness is growing all the time and the longer people take to make the decision to sell these homes, the more of a financial loss they will take.

There is no possible change we could make about our life if the project goes through our property. We have invested everything, money, time, labor and thousands of memories in this property to have our wilderness hide-a-way. We cannot just pretend there are not any towers and power lines running through our property causing devastation to our surrounding environment and ecosystem. We cannot sell and start over. Financially we would take a huge

Bay Lake Formal Comments - Additional Comments by County/Municipality

hit in the worth of the property. We do not want to leave our memories behind. There is too much of our lives invested in this property to just have it destroyed by the Bay Lake Project.

We have had communications with our neighbors that would also be affected negatively by the Bay Lake Project. They all have the same concerns as we do, however they are under the impression there is nothing they can do. They truly believe that ATe will choose whichever route they want regardless of the consequences to the people who utilize the land.

We propose an alternative route. We propose ATC follow the existing ROW along the highways. Why create a negative impact on a new area by changing the route. ATC already has easements and has already impacted the surrounding eco-system and environment along the ROW. There would be fewer disturbances to surrounding homes and businesses. It would be easier and less expensive to build and maintain the towers and power lines off of the highways instead of Private Property. The additional costs to buy surrounding land from owners, or obtain easements from them, in addition to the cost of clearing the pathway for the new route is unnecessary and only will only be passed on to ATC customers.

The best way to reduce or eliminate the impact on the environment and the impact on the quality of life of those of us, who utilize the land, is to keep the route along the Highways.

Our last concern is the lack of effort on behalf of ATe to notify of us this Bay Lake Project and the open houses. We received no notification at all. The only reason we now know is a neighbor happened to mention it to us when we were there in October 2012. We called another neighbor and he sent us a copy of a letter he received back in April 2012. I called ATC and was finally sent a letter on November 6, 2012. Since this time we have been researching this project to gather as much information as possible. Given all of the aforementioned reasons, we feel it is vital for us to file a written comment to the Public Service Commission. It is our hope this letter will STOP the Bay Lake Project from routing through our property, our wetlands, and our environment.

Sincerely,

Jeffrey Ott

Subject: Request for Additional Information - Bay Lake Project

We just received a mailing showing proposed work on the Bay Lake Project very close to a property we own. I have contacted the call center and am unable to get a return phone call or through to speak to someone.

Can you please tell me what work is being proposed for the P290-2 preliminary route in the Town of Beaver? There are no transmission lines on the map along this route, but it is showing up as yellow so I would like to understand what possibilities exist for work in this area. Please provide me with whatever information is available at this time.

Thank you.

Subject: Bay Lake Project Comments - P290-2 Corridor

We believe that it would be a terrible mistake to put the proposed power line along the P290-2 corridor. Even crossing part of Lake Nelligan with a power line, would ruin a lake that is currently a peaceful, remote natural setting. We are concerned that tall lines in this area could drive away the nesting loons and eagles that currently live on this lake. We own a waterfront property on a beautiful lake, and we find it absolutely unimaginable that you would take away our cabin property to provide power to users in another state. We have personally spent the last 4 years working to remodel our property and turn it into a wonderful vacation spot for our family. We sincerely believe that there must be a more logical spot for your proposed power line than through the untouched natural beauty of Lake Nelligan.

We would also like to comment that the initial communication that was provided to us gave us absolutely NO idea that you meant to put the main line through our remote property. There were so many proposed routes that we thought you meant to do work in all of the areas and that it would be small line upgrades in our remote area. We attended the second round of open houses after receiving the second mailings and are still in shock that you are actually considering taking away our waterfront cabin property to build a power line. We have called your phone number several times to ask questions and left a call back number, but our calls have not been returned.

Sincerely,

Beth and Steve Perry

Multiple concerns with project around Nelligan Lake in town of BEAVER. Address N5304 45th Rd Beaver WI

1. Environmental - Runoff Fouling the Lake, Displacing wildlife - loons
2. Aesthetics/Property vacation - why ruin a beautiful lake with powerlines. This would also De-value my property. - If you don't take it for the project.

The Transmission line Rebuild of 2006-2007 across my farm was a project that cost me \$1800.00 for a lead test after ATC hauled 35 ton of cropland away as toxic waste! It Devalued my cropland real estate value. Now ATC wants to build another T. Line through or near the existing line. This is going to sandwich my planned retirement home between 2 135Kv lines. This is totally unacceptable with E.M.F.'s. I have a Pacemaker - Defibulator, I was retired out of my job because of EMF's in the shop area, I couldn't even be allowed to get my own tool box out. I worked 39 yrs to retire on this farm, you are destorying that Dream.

Subject: BayLake Project

Concerning the route of the proposed BayLakeProject through my farm and or surrounding area (neighbors) ATC has given absolutely no thought or consideration to the effects of their right-of-way in relationship to what has already occurred in the area. This winter 60 acres to the west and north of my farm, (lee Meyers) 112 acres of forest was select cut harvested, which looks very barren and leaves little cover for the wildlife, namely the whitetail deer which have been seen in groups of 30 plus feeding in farm fields ,because they are confined to smaller plots of forest to find cover. This winter 40 acres to the south and east of my farm (Pat Divine) approximately 40 acres of forest was select cut harvested, which looks very barren and leaves little cover for wildlife, namely the black bears that have been seen more frequently, since there is a lack of cover for them. Also this winter Beihl Construction Company has clear cut another probably 30 acres for forest to get at the gravel and stone for the asphalt plant on the corner of Hwy 64 and 15th road, not to mention the area (80 acres) that the plant resides and the pits that already have been stripped of the forest to get the gravel and stone out. Now ATC would like to, depending and the route chosen, carve 120 feet wide strip thru an estimated 25 acres of woods on my farm on the east side, or at the very least widen the easement already running through my west forty acre parcel which also includes forest. I fought my own brother in court 11 years ago, at a cost of \$7,000 NOT to harvest any trees off this property, when it was jointly owned by him and I, needless to say that brother is no longer.

I sympathize with my neighbor to the east (Ron Meyer) as he concerned with the aesthetics of the area built his retirement home on 20 acres with a wooded buffer between his lawn and the 11th road, also paying \$27,000 for PSC to go underground 80 acres to provide power, as to not have poles and wires in view. Now he stands to lose his wooded buffer 120 feet thru 10 acres ,have towers ,not poles, and possible wires routed over his workshop.

My own situation my new retirement home to be built would be sandwiched between two transmission lines. Duely noted E.M.F.s are a major concern of mine as I have had two heart attacks and a major stroke and now have a pacemaker-defibrillator I am not allowed to weld, have been disability retired from my job in an electric furnace factory due to E.M.F.s liability factor. Needless to say I do not like the transmission line running thru my property now, much less another one or large voltage on the existing line. The failure of ATC to notify maintenance flights ,inspections, the spraying of chemicals, trimmings, and safety reflector material on their tower on the existing transmission line, is any indicator of what's to come is very disturbing. It is noted that passing the buck to the next dept. head is the way around addressing issues as these.

The existing transmission line was in service in 1928, and was replaced in 2006-2007. Your project cost me \$1800.00 for a lead test to protect myself from DNR and the Beaver Creek, I was NOT reimbursed, thank you. Your lattice tower painting contaminated 35 tons of farmland soil which was carted off as toxic waste, MJ Electric Company did not replace any of it till my attorney advised them to add topsoil so crops could again grow. ATC devalued my cropland value as now I have to inform any buyer that it was contaminated with Lead, thank you. Again a maintenance issue is occurring with the leaching off the existing tower to the soil, again ATC turns a deaf blind eye. thank you.

your open houses were of no value to the residents of Wisconsin. The only answers given were: We don't know we are in the PRELIMINARY stages of Planning.

My concerns are with the possibility of more tows be added to our farmland, and the effect it would have on the centre pivot irrigation system we on planning on.

It would seem that the most logical corridor route would be through county owned land, which is now a legal option.

Since ATC generally pays 100% of fee value for easements, could you acquire ATV & snowmobile trail rights too. This would connect the trail system improving recreation. This could be a positive action when nobody want a high voltage power line in their back yard. Note: You would only need this in a few locations.

Since you have two power lines going North/South why not follow an existing easement?

We want Project Updates and Information via US Mail Postal Service

The meeting in Oconto Falls was informative and the personnell did an excellent job.

Needless to say, but I'm glad the project is on hold in our area.

I did talk with Teresa M. Kochaver and Rob Schuh about a survey stake missing on your existing transmission line where your personnel have been working and nothing is being done with the brush that has been cut. I will have to do some measuring (150 ft easement) on cutting of mature trees. This last weekend 5-25-26-27, 2013 my wife and I went to the property and measured to find our survey stake that wasn't in sight. We used a metal detector and found it under 10 inches of sand and gravel that your personnel had covered in their construction in that area!!! Some foresight may be helpful in the future.

1. We object to corridor U110-2 along Hwy 141 located in the Town of Beaver, in Marinette County. We own property along Hwy 141 and Hwy P that is being considered for a new power line.
2. We object to corridor A630-2. There already is an existing power high line along that property.
3. There are other option corridors available through Beaver. We prefer that you choose corridor A90-2.
4. We have maintained our property in Beaver for 20+ years. In addition; we have family members who have adjoining property in this corridor where we have enjoyed our family traditions for 50+ years.

I was not able to attend the 5/15/12 meeting closest to my location, due to prior committments. From what I heard from a neighbor who attended the meeting the new power lines could come 600 ft into my property. I have several conserns: 1. Stray voltage for my animals, TV, Cellular phones & cellular internet. 2. Financial hardship, due to the loss in my property value. If cut through my land, there would not be enough for hunting and unable to sell as hunting. Living on a highway already has many down falls and this would jeopordize our money already invested into this property and would not be able to get value back out. Home should be an investment. Not a loss.

Subject: Possible power lines

As a concerned member of the community I have looked at your possible routes and my house, rental

property and business would possibly be affected. My location is W11124 Hwy 64 Pound, WI 54161

I would be extremely concerned with the loss of potential business as the aesthetic look to my business would

be affected severely and also not to mention it would be affected when being constructed and maintained. I as well would not want to live at my residence which is connected to my business due to the

noise and possible health affects caused by the project. Also talking to my neighbors in the community NONE of them think this is a feasible route to put such lines.

Very concerned resident/business owner

Justin J Wisnefske

Comments:

The current line dissects my property diagonally. My property is only about 1 acre and although the right of way extends back over 100 years I hope the location of the power tower can or could be moved only about 150ft to the north or south to avoid a major distraction in the middle of my yard. currently I have provided access to other properties for maintenance of the line through my property. This will end with a fenced off property for the sake of my dogs later this year. Access to the line outside my property will have to be gained by other means. Thank you for your consideration.

Comments:

I own property in segment A430-2. The present line disects my property diagonally. I don't understand the reason that line makes a bend in Beaver through residential property. The line follows the rr tracks to the point, bends, then returns to the tracks after Beaver. The future value of my property depends on the route the new line takes.

Just for my planning purposes I am very interested to know if the line will remain on present course through this area.

Thank You,
Thomas Zoromski

I am adamantly against any transmission lines or other facilities being built anywhere near the Menomonee River corridor. This river is one of the most pristine, well preserved, secluded areas left in the state. Any power lines or related structures would severely diminish this area. The hydroelectric dams that are currently in place are enough. I will gladly pay higher energy costs for keeping this area in its natural state!

We attended the meeting in Crivitz on the Power Lines. This was the first we heard the the new lines couldn't go on the existing Poles. This would put the 150 foot Right Way in our Front Yard where we planted many Blue Spruce and Oak trees for Privacy. Another set of lines in such Proximity to the existing lines can only lower the resale Value of our property when we decide to sell. another major concern is any Possible Heath danges that may be inceased by another Set of Lines in the same area. Another concern would be electrical and Satalite dish interference. I realize that electricity distrubutin is critical. But Should those of us already looking at Lines and carrying the risk associated with them. Carry the Burden of another set of lines, also 40 ft of our 50 foot Garge will be in you right away.

Good Afternoon,

I own a vacation home on the Menomonee River where your proposed routing of new 345kv lines are replacing the current 69kv lines. What is there currently, I cannot see nor hear. Will this be the same with the larger lines? Are the new lines taller, bigger, noisier?

Given that the Menomonee River is a recreation area, I hope you would chose the alternate routes that are back in the woods and not interfere with the River.

Thank you for your time.

First of all. If the line comes through my property you can buy me out I won't live here The land has been in my family all my life. I built my own house. We bought the strip of land in the back to have woods between us and the neighbors and we use the fire wood for our wood stove. across the road from us is a field put it their. Also we don't believe it's healty to live in between the 2 lines (one we already have here). The Value of my place would go down dramatically.

Subject: The Bay Lake Project

I do not want to take up too much of your time, but I am doing a research project for my college english class. I have chosed the The Bay Lake Project as my topic as this proposed line will be near some property that I presently own. I have a couple of questions about this project. What would be the cost difference to say do underground lines versus above ground lines. I understand that it is more costly, but by how much, double, triple, or what.

How far from the power lines do the land owners have to be to get some compensation for the deceased land value that will occur should a proposed line be put in.

How is it decided which corridor is to be used for the project. What if there is a residential portion and not more than a half mile down the road, there is a low lying area. Why would you not pick the least area that would affect residents and use the low lying areas that are not fit for habitation.

Do you have residents that come back to you seeking damages for severance, stray voltage, and health reasons.

I appreciate any information that you can give me to use in my research paper.

Thank you for your time in advance.

I am co-owner of a piece of property on N19206 Gasset Road in the town of Dunbar, Marinette Co. I have been unable to attend your informational open houses, but am interested/concerned about the route of the proposed transmission lines and my property. I understand that if the lines utilized my property, I would be compensated for an easement. My concern would be that the realistic value of our land would be greatly diminished, long term, by much more than your fair market value compensation. I also have concerns with the long term effects of high voltage power lines on my family's health. Thank you for this opportunity to express my thought.

Sincerely,

Mike Pozolinski

To Whom It May Concern:

This letter is in regard to the proposed Bay Lake Project that is being considered in the town of Dunbar (Marinette County).

As was explained to me in both letter and at the information meeting that I attended, you are considering reinforcing the electric transmission grid that runs along my property from south/west to north/east. This development as currently proposed would dramatically impact my properties. I am concerned in both its value and the effect it may have on the integrity of the land. I have spent a good part of my life in this area, first occasionally vacationing here, then buying a cottage to retreat to, and finally purchasing land and building my retirement home. I enjoy the natural beauty and comfort that the area offers every day. I have been lucky enough to be able to purchase a few 40 acre parcels one of which I have built a home on. Unfortunately this is the area that would be mainly affected by your plan in its current form. The transmission grid (that now is hidden by woods) would be much wider and closer to my home and would not be concealed by forest or trees. This would have an enormous impact on the appearance of my property as well as its overall property value.

In your letter you speak to environmental commitment as well as financial and environmental sustainability, these are areas of concern for me also. I am under the impression that you have several options to consider and I am hoping that you will look at an option that is cost effective for you along with having the least impact on the community and environment it occupies.

I appreciate the information that you have supplied and the forums you have created for the public to get accurate information. I hope you will sincerely consider the negative impact this would have on not only my property but this area in general.

Thank you in advance for considering these remarks and taking the time to investigate the thoughts of the people in this community.

Sincerely,

Douglas E. Rohde

Subject: ATC Bay Lake Project

To whom it may concern,

We received a letter regarding your Bay Lake Project. We own 2.6 acres in Dunbar, WI on Blueberry Point Rd. We are in the process of gathering estimates to begin building a structure on our property. Our concern is if your lines run through or take up the majority of acreage, we will not move forward with our plans. At what point will you know the exact route/path of your lines and can you give us a clearer understanding of whether our property will be affected?

In viewing the detailed map on line, it appears your projected path runs down the middle of our land in Marinette County. Our parcel # is 010-02201.000 Part of sec.33

Any information would be greatly appreciated.

I am opposed to preliminary route P340-2 - our property has been in our family for generations to enjoy nature's beauty & the great outdoors. This new P340-2 route will dramatically destroy the natural beauty of the land and cause great concern for our property and equipment. We produce maple syrup on some of our land which requires a lot of equipment. Your large cleared area for these lines will make it impossible to keep out unwanted guests & theft of my property/equipment. I currently have a gated locked access road that keeps these people out & it works well. No matter how many private property signs I put up, your access would do great harm. (signed)

Subject: Fw: Bay Lake Project concerns

ATC,

I am a co-owner of prime hunting land in Dunbar. It is located in section 2 page E3 of your project. We already have a power line and right-of-way running through the full length of our 80 acres and do not want another right-of-way made, nor do we want the existing one made any wider. We are in the middle of the county forest, surrounded on all sides by public land and the only problem area is the right-of-way. Everyone considers this public land free for them to use and abuse! The property is listed under Jay & Jeff Weyenberg and Mark Wiskow. We all own 1/3 equal share in the 160 acres the power line currently goes through

My biggest concern is that we are going to get raked over the coals on this deal plain and simple. We are this very small percentage of private land in a sea of public land in that area, and we have something very nice, something very hard to find and you guys are going to change it and we will have anything to say about the change. You will give us all the politically correct answers, while dancing all around the true issues at hand. We have absolutely nothing to gain by your company using our land to improve its profits!

Here are my concerns:

1. Loss of wooded hunting land: We are going to lose a lot of woods if this goes through on our property, hunting land that will no longer be huntable. Please don't say that it is still huntable because it will not be truly huntable once it is cleared. That is like saying that it is good hunting sitting on a highway. The forage that typically grows on a powerline is not good deer browse. Typically in the northern forested regions wide open spaces do not get used by deer during the hunting season! Yes I can sit in the wide open and hope for a running shot at a deer but that is not hunting. I have already heard this from a number of your representatives. We currently have a 100 ft wide powerline right-of-way that runs the full length of our 80 acres. The current opening is (2640 ft x 100ft) 264000 sq ft or 6.06 acres. If you widen it now the opening will be 2640ft x 250ft) 660000 sq ft or 15.15 acres. Now I am down to 64 acres of land
2. Taxes on useless property: We will still have to pay taxes on 80 acres of land when in actuality we will only have 64/65 acres of recreational land. You will basically take the land use/value away, get your benefit from the land and we will have to pay taxes on it. If this goes through we need to be re-imbursed for the taxes in future years.
3. Trespassing, vandalism and theft: Every person will consider this right-of-way as public access! The wider the opening the more people are going to want to use this as a public access. Then once they go on the right-of-way they will start to wander off into our private hunting land. Now I have to deal with people driving where they should not, ruining property that is not meant to be driven on, getting in by tree stands, our cabins, etc., and then the vandalism and theft start. If this has to go through our property something needs to be done to prevent this from being used as a public access. Not something simple like putting up a couple of posted signs but something realistic, real life that will prevent public access. Something that will last through all of the people trying to tear it down, shoot it, run it over, or pull it out with their trucks.
4. Purchase price of right-of-way easement: We will not get any benefit from this power line right-of-way once the change goes through so we should get market value for the land for all of the acreage we lose. This right-of-way is a negative when it comes to us trying to sell our land. Who is going to want to pay for 80 acres of land when they only have 64 acres of hunting land. I cannot

Bay Lake Formal Comments - Additional Comments by County/Municipality

advertise it as only 65 acres. The price of the land will go down but the taxes remain as if it were 80 acres of recreational land.

I challenge you/your company to be straight forward with us, and provide us open, honest feedback throughout this whole process and not provide generic letters and answers that work for everyone, and to treat us fairly if this has to go through our land. Our situation is not the average situation. I look forward to hearing back from you staying in contact with us on this project.

Thanks,

Jeff

I represent a snowmobile & ATC club that has almost 80 miles of trail in the proposed area. I would like to be informed of intended routes that are chosed in the future. If I can help with co-ordinating routes to co-exist with trails, please call me. If the possibility of creating new trails in the area exists, also feel free to contact me. Our trails are in Beecher, Pembine, Niagara, & Dunbar.

RE: Bay Lake Project - Comment on Potential Routes

Dear Neil:

Our office has been retained to represent the Coleman Lake Club and its affiliated entities (collectively, CLC) with respect to the potential routes being considered for ATC's Bay Lake Project. We are submitting these comments as part of the public participation process.

Introduction

CLC entities own approximately 9,237 acres of land in Marinette County which has been managed for conservation purposes. CLC was originally established in 1888 and is now the largest non-industrial property holder in the region. A large portion of its holdings are in and around the area identified as the westerly most route in Project Area 2.

CLC has also retained consultants, including Steigerwaldt Land Services Inc., to assist it in evaluating the potential impact of the Bay Lake Project on CLC lands and interests. CLC and its consultants have attended several of the public forums hosted by A TC and have appreciated the information provided by A TC.

CLC is writing at this time to express its objection to the westerly corridor and to indicate that it will oppose that corridor if it moves forward for consideration. If necessary, CLC is prepared to fully participate as a party in the Public Service Commission (PSC) proceedings and beyond. CLC is not opposed to providing additional transmission reliability to northeast Wisconsin, but there are at least two other corridors that are viable alternatives that should be utilized. CLC strongly urges A TC to remove the westerly route from consideration prior to filing its formal application with the PSC.

Summary of Environmental Concerns

CLC's objection to the westerly route is primarily based on a number of significant concerns about the impact of the project on the unique and valuable natural resources in this area. These concerns are based upon the preliminary routes as initially presented by ATC.

1. Potential Impacts to the Pike River.

Approximately 1.1 river miles of the North Branch Pike River occur within the proposed transmission line corridors. The Pike River is one of only four state designated wild rivers. See Wis. Stat. § 30.26 and Wis. Admin Code ch. NR 302. The management objectives for these unique resources are to "protect legislatively designated wild rivers from development so as to afford the people of this state an opportunity to enjoy those rivers in their natural and free-flowing condition." Wis. Admin. Code § NR 302.01.

The DNR's specific management objective for the Pike River is stated as follows:

The Pike River Wild River is managed to preserve and protect the Pike River in a free-flowing, natural state by preventing development adjacent to the river and by restoring sections of the river to an undeveloped condition, to protect and manage the natural resources associated with the Pike River, and to provide compatible outdoor recreation opportunities.

See DNR website at <http://dnr.wi.gov/topic/Lands/WildRivers/PikeRiver/>. The full DNR management plan for the Pike River is at <http://dnr.wi.gov/topic/lands/masterplanning/documents/MP-WR-PikeRiver-1989.pdf>.

This area contains old growth forest characteristics and other unique and rare habitat. It is also a Class 1 trout stream. For these reasons, the management plan provides that a no cut buffer be implemented within 150 feet of the river.

The management objectives are to prevent development adjacent to the river, and restore undeveloped conditions. The placement of a 345kV power line through this area is the antithesis of these objectives. Such a high voltage power line, with its attendant clear cut corridor, provides significant adverse habitat, aesthetic and watershed impacts.

2. Potential Impact of Rare Species

Our consultants in consultation with DNR staff have determined that within the preliminary transmission line corridor there are two rare bird species, four rare invertebrate species and fourteen natural communities with high conservation values. We are not able to share in a public document any of the specifics associated with this review, but the presence of such a significant number of rare species is an indication of the valuable and unique habitat that could be impacted by a high voltage line in this area.

In addition, a survey of land types indicates that much of the corridor area is the Athelstane Moraines land type. These areas feature old growth forest areas in the proposed corridor, many of which are associated with the North Branch Pike River. Placing a high voltage corridor through this area has the potential to substantially disrupt or otherwise impact these habitat values.

3. Potential Wetland Impacts

The CLC has undertaken a preliminary wetland delineation of the areas being considered for the

Bay Lake Formal Comments - Additional Comments by County/Municipality

westerly corridor. This review has identified three predominant wetland types in the corridor area: Alder/Shrub Swamp, Forested Swamp, and Sphagnum/Peat Bog. These wetlands types are generally are considered high quality wetlands with significant wetland functional values. The preliminary wetland delineation shows a significant number of wetland acres in and near the proposed corridors: 18.7 acres of alder/shrub swamp; 40.4 acres of forested swamp; and 30.2 acres of sphagnum peat bog. Many of these wetland areas are associated with the North Branch of the Pike River, but others are in forested swamps and in bog areas.

Wetland impacts are regulated by the U.S. Army Corps of Engineers under Section 404 of the Clean Water Act, the Wisconsin Department of Natural Resources under Wis. Stat. § 281.36, and Marinette County under its shoreland wetland zoning under Wis. Admin. Code ch. NR 115. Central to the federal and state wetland regulations is the requirement to evaluate practicable alternatives so as to avoid or minimize wetland fill impacts. Here, these wetland impacts can be avoided by choosing one of the other corridors.

Conclusion

Based on our initial legal and technical assessment of the westerly route in Project Area 2, it is our opinion that this route is not viable from an environmental perspective. In addition, as you know, the Legislature has established a set of priority siting locations for transmission lines in Wis. Stat. § 1.12(6). The use of existing utility corridors is the highest priority. The easterly two corridors satisfy that criteria, the westerly corridor does not for a significant portion of its route.

We have yet to retain additional engineering and economic consultants to evaluate the relative costs associated with this route. However, based on our knowledge of this area, the rocks, steep slopes, dense woods and water resources appear to present challenges that would increase the costs of establishing a transmission line in this area. We believe that there are more than adequate grounds to disqualify this route from further consideration without those considerations, but we are prepared to undertake a fuller analysis of these impacts if necessary.

As a result of these considerations, we would strongly encourage you not to include the westerly route in Project Area 2 as part of your application. We would welcome the opportunity to meet with you further to discuss CLC's concerns.

Sincerely,

Very truly yours,

Paul G. Kent

I received information from you regarding the proposed installation of power lines on or near my property in Goodman, WI. I am adamantly opposed to this project, not only for the health of the people who live in the community, but because the value of the property would be reduced to \$0. Please email the information shared at the open houses.

I have attend both meetings ATC has had in Iron Mtn. MI. I find no new information shared. I question the need for more lines. We need to maintain current Marquette Power Plants. Your Rep. noted the question if that plant would install environmental controls mandated. Question - Is it more environmentally sound to run new lines? I don't think so. Bigger is never better. Localized Service solves problems.

If Lines are Run - why not follow the straightest path. The 141 (Hwy) Line has been upgraded recently - follow that path. You allready have the rites.

Thank You.

Good Afternoon! As I review the map you sent I have noticed the project # P340-2 travels very close to our land. I have several questions you may be able to answer. 1) what is the benefit of this segment of power # P340-2? 2) I don't understand with the northwood decreasing in population because of industry & economics changes why we would consider such a diverse project?

Throughout the Midwest there so few areas like this uninhabited pure wildlife, why change this. 3) Spur Lake Road does not need change that would scar the beauty: If your going to bury a 3" cable that would be fine! Please let me know your intentions.

Thank you for your understanding

Comments:

First of all, Do you have the right to procede across my property with out my permission. If my propoerty is included in the route, and I cannot prevent it, will you buy the property from me or will I be compensated for the lost value of the property. I own this land for recreational purposes and I believe it's value will be lost to me if this project is completed across my property. Unlike the gas pipe line that is already there, it leaves little to no impact on the visual quality of the land. As I understand it you are planning large metal towers over 100 feet tall which will ruin the view and quality of the land to me. I look forward to your response. James Zajac

I am opposed of the project. I have a tower in my yard next to my house. Back in 2005 when a new tower was put in, ther was nothing but problems. MJ Electric who did the work pee'd & pooped in my yard in front of my wife & kids. Could have asked to use the bathroom & didn't. Truck routinly spun tires through yard. Very poor job of clean up with trash & leaving ruts. I complained several times & finially had to do things on my own.

I understand an upgrade maybe needed. But is hould have been done at that time!!

In Attending the meeting at Crivitz it appears expanding the R.O.W will not work, sue to the fact the Line would have to Be placed over my House. I am on Route # A660.2.

I am not in favor of expanding it near my house either if it affects TV, satilite, or radio signals it will be your responsibility to fix it.

The meeting was benifical & had many good people answering questions.

Hi,

I was unable to attend the public meeting held in Crivitz in May and I was wondering if there was any way I could get the information that was shared during that meeting.

In general, I am looking to see a more detailed map of the proposed routes that may be near my home located at N9917 US Highway 141 Wausaukee WI 54177.

I have viewed the preliminary routes on your "Interactive Map" (from your website) but I was looking for something that may have more detail.

Please let me know if there is any way I can obtain this information.

Thank you,

If this goes through as proposed, it would have a major impact upon our home & property value. We built a new house here in 2008. Based upon the current economy we would be losing money on the home. It cost more then, than what it is valued at today. E.SE. of our land is Mt. Tom, a granite outcropping. See U.S. 65. Mt. Tom Quadrangle. This will have an impact upon the line also. therefore, I am opposed to the line as it is proposed. Frank R. Haeni

This comment concerns corridor P400-2 which is centered on Camp Five Road. If it is determined that the route of the powerline is to go on this corridor, I feel it should go on the far east side. This would provide minimum disturbance to residential homes, small lake and already-surveyed lots west of Camp Five Rd and North of Norway Pine Ln. There is little residential property east of Camp Five Road. That is along the far edge of the corridor. Also shown on the large map is an airstrip indicated east of Camp Five and south of Moonshine Hill Rd. This airstrip has been a tree plantation for years, with 16-20 foot high trees. The newer maps no longer show this airstrip.

Thank you

My concern with the new powerline project are my 2 young sons. My home sits very close to the powerline presently there. The new powerline will be directly in my front yard and run directly above my 2-story garage that has living quarters in the upstairs. I currently have out of town relatives that use the area when they visit. This summer my 18 yr old cousin plans to use it year round. My future plan was for my boys to use it as well. Also we have had 2 dogs and 1 cat die of cancer in 3 years and now another dog has it. Also all of our trees on the east side of the line are dying. Please re-consider the route of the line. Any chance of discontinuing the use of the current line in the future upgrade would be wonderful as well.

Thank you.

RE: our home, your parcel number A650-2.

We currently have 2 easements at the front (west) of our property. One for US 141. The other for the existing powerlines. This amounts to a couple hundred feet which we have very little use of. This is open, regularly sprayed and/or cut. It seems unfair to get a third easement forced on us. That easment would cut hundreds of trees we planted over the past 30+ years as a visual and sound barrier. It would destroy hundreds of naturally occuring trees including a have dozen 200+ year old white pines. The current powerlines were just put in causing me a month of work repairing my driveway and filling in ruts. The taking of a 3rd easment for a second set of powerlines would have a devistating negative "Quality-of-life" impact, Remove a significant ammount of trees and wetland vegetation from our use. There is no question that it would have a huge negative impact on our property value. Is having 2 major powerlines side-by-side even smart? One tornado and both are down together. (Like the 3 that have been close in the past few years)

Please consider other options.

Thank you.

Dick Pladies

We totally understand & both agree for additional power upgrades to the grid system. It is just as important for our northern regions to have the much needed power available to them also. What we struggle to understand, is why would anyone would want to destroy more timberlands for a pathway to route this powerline when we already have a system routed just to the east of our location. One would think this would be much more cost effective & a lot less damaging to our natural resources using an existing route. We understand some areas along the way may not be able to do so, but in our area, we think there is a possibility.

Is there a better map that shows in more detail, exactly what properties or roads you may be using. We only have 3 acres here, and just built a house 2 year ago. I would really like to see if this power line may go through the middle of our property. The maps on the website do not show that much detail. Just a general area.

Sincerely,

Ann Sutton.

Subject: transmission line project

We would like to express our strong opposition to the Bay Lake Transmission Line Project There are several residences along County Road X that would be affected if it would run along this line. Our number is C475-2. These are just a few of the people we have talked to who oppose the project.

Sincerely,

Leon, Penne, and Amanda Koch

I do not want the power lines to go through my property as its a danger to our health. Although there are no studies that I know of, doctors and even some vets say the magnetic fields can cause cancer. My mom, who lived just east of my land, died from cancer, my bother-in-law died from cancer, and now my aunt, who lives close to a line is being trated for cancer. The young folks living up on the hill had 2 dogs & a cat that died from cancer & now their 3rd dog has it. She has 2 little boys - they should be considered in this decision. The new lines are supposed to be twice as strong, surely you can find a new path, maybe across the highway, but away from our homes. Please reconsider this route. You would be creating more work for people & isn't that what their looking for?

Comments:

We own property north of Middle Inlet where the existing 138KV line crosses Hwy 141, we are on Moonshine Road with property between 141 and Moonshine Hill Rd.

I spoke to your reps. at the earlier Oconto Fall meeting on our concerns when you rebuilt the existing line a few years ago. There was cutting of cattails, small trees and other vegetation in an area that would normally be classed as wetland. A fence that was in poor condition but served as a marker between us and the RR R/W for snowmobiles which was removed, as a result we have had some snowmobile trespass on our property without the marker fence. Also at the time of the rebuild, the construction company built an access road detour out of the easement without having any clear agreement or discussion regarding their actions. There was no payment or even a thanks for doing this, not very good PR. Much of the work was done with consideration of the property, but again there was some work done without regard to property owners concerns, I would describe their work as "A Bull In A China Shop", it appears that MJ was most of the problem. I would want to meet with your construction group on site before any work is done on our property if a route is chosen paralleling the existing line between Crivitz and Wausaukee.

Further, the existing line is not on our east property line, for some reason the existing line is approx 100 feet west of our east line. We would strongly prefer that the new line be built east of the current 138 line north of Crivitz or Middle Inlet to minimize cutting up our property more than it currently.

We have an interest in the route of the new line and the easement acquisition as to route side from the existing line. We also are extremely concerned on the construction activity and the care or lack thereof of the construction crews. Your crews on the last construction activity left problems that will have us commenting on construction activity at any future planning meeting if the route is chosen over our property.

Message:

In the words made famous by Horace Greeley, ¿Go west young man go west.¿ The corridor west of Highway 141 is a direct line north of an immediate southern project. Once finished with the southern project it is a small matter to continue directly north.

In addition the west corridor is already wider than the eastern corridor, thus it is better suited for this project as it requires less property acquisition and clearing.

I have hunting//recreation property east of the Amberg line and do not wish to see the corridor widened. I believe it will negatively impact the hunting and wilderness aspect of the area. There are few places in such condition left, as this and hope that it will remain so.

I am unable to attend open house at Pine Mountain in Iron Mountain, MI, due to surgery.

I want ATC to know that I am adamantly opposed to the preliminary route for the new power lines!

According to your map, there is an existing line & an alternative route that makes sense & would not disrupt peoples lives. I would hope you can resolve this in a reasonable time frame, w/in 60 days, so home & land owners lives are not in limbo. A speedy decision in this matter is appreciated & important to all involved.

Thank you.

Our property is bordering the railroad tracks near the proposed site. A cranberry bog is along side the tracks, 2 artesian wells and an underground stream. There is also a swamp. The railroad tracks are built thru this marsh area and when the train goes through, has to slow down due to the unstable ground. They are constantly repairing the tracks thru this area due to this condition of the ground. The bog is very close to the tracks.

I am also a hamradio operator and moved to the country to have noise free conditions and have installed a 77 foot tower for this purpose. I went to great trouble to install my power, cable & internet cables underground to eliminate interference. High tension powerlines would not be appreciated after all of this trouble

Im very concerned about new power line that you want to run. I looked at the interactive map and all the houses on Bennett Rd - including ours are part of the corridor for the power line. Our entire property is yellowed. (2.5 acres with our house & out buildings.) on the map. With the economic down turn in Niagara & the closing of the papermill we can not afford OR endure the hardship of the proposed powerline. We have recently updated our home and the value is significant. We object to this proposed route. Included are pictures of our property & home. Ale & Linda Blagec

I think the best Route are the exsisting right of way lanes 141 - and the main Route to west. The 141 would be my recommend way.

This correspondence is in regard to the Bay Lake Project transmission line being proposed through the Town of Niagara.

I met with Neil Palmer who provided information which I passed on to our Planning Commission.

After reviewing the route options the Planning Commission recommends the use of route # A160-2.

Choosing this route as it has the least residential impact and is through Marinette county Forest land.

The Planning Commission would also like to request route A160-2 be used for ATV and Snowmobile use.

Your consideration in these matters is greatly appreciated.

Respectfully,

I'am the Listing and Selling Agent AND one your purposed sites goes down Peterson Road near Aurora and Accross A LARGE Parcel of Private land 320 ACRES. This would have a severe Negative impact on the homes along Peterson Road & the large Parcel I currently have for Sale. This is by far the worst route of the 3 purposed. Buyers will not close this Sale unless they know for sure that the TRANSMISSION line is not going thru the property.

This would also have a negative effect on the many homes along with vacant parcels of land greatly reducing values of properties.

I'm not sure what sort of comments you are looking for. How about please oh please don't put your powerline through my property?! I already have the one line running through it and had I known what a head ache that would be I never would have bought it. Vehicles come through leaving ruts in the road. Chemicals are sprayed which is less than comforting to me. My property was used as a staging area for the new towers on the North to South line which meant noise, garbage, shit in the woods and workers dogs harrassing my wildlife. The trucks crusted the culverts in my driveway. Every time the tree cutters come through they cut more and more of my mature trees Finally, the general public seems to think that poerlines are public property and so I am forever chasing them off. I bought the property for the woods and wildlife and while I realize you probably don't share my concerns, I did want to make you aware that my house and garage are extremely close to the north side of the existing line and would appreciate if would keep that in mind as you plan.

Subject: Bay Lake Project

I currently am on the Line that runs north and south through Niagara. (3 miles south). We just had that line and towers replaced in the past 3 years so you understand which one I am speaking of.

If you try to select that one since it is established will it be able to handle the additional lines without affecting its current size?

I am speaking of the width of the right a way as it stands now.

Will it require additional poles or infrastructure?

How would that work.

Thanks.

CURRENTLY OUR PROPERTY SITS ON A 138KV LINE.

PLEASE ADVISE EASEMENT SIZE FOR THIS AND WHAT WOULD THE EASEMENT BE FOR A 345 KV (BAY LAKES)?

WOULD PEFER THAT EXISTING 345 KV BE USED. JUST FIXED RIGHT AWAY AFTER NEW TOWER INSTALL FROM NIAGARA TO ABRAMS. SINCE I AM NOT GETTING REIMBURSED FOR THESE BUILDS DO NOT HAVE ANY INTEREST IN GOING THROUGH IT AGAIN.

Elm Grove, WI 53122

RE: utility easements

Dear Mr. Palmer,

The Town of Niagara would like to go on record as being against the construction of new transmission lines being run through the town. As the enclosed Resolution 2012-9-A states, we would ask that the Public Service Commission open the rule making process. There has been no indication that more transmission lines run through our municipality will in any way benefit the residents of the Town of Niagara. In fact, the intrusion of additional lines will initiate further cost and inconvenience to our constituents. The town is against the construction of new lines on new routes; however the town is not against following existing lines for updates and new construction.

Sincerely,
(signed)
Alfred Sauld, chair

We unequivocally oppose any new routes for electrical power lines - especially the route that would incorporate Segment 625-2 Segment 340-2, Segment 350-2.

We believe it would be in the best interest of all parties concerned to upgrade and/or expand existing routes.

The proposed route that would affect the above mentioned segments would be intrusive to the land owners as well as the natural habitat to the wildlife that inhabit that land.

Please reconsider this route and maintain and support a path through the existing lines.

Respectfully submitted

Subject: BAY LAKE PROJECT IN PEMBINE, WI REF # 080-2 & 090-2

To Whom It May Concern:

My name is Joseph Calarco and along with my wife, Dawn, we own property in Pembine, WI (N18894 Grave Lane) that happens to be part of ATC's projected corridor for power lines. I attended the open house in Crivitz, WI on Wednesday May 15, 2012 and expressed the following concerns and objections to your staff regarding this project.

We object to the power lines on our property because it would not only reduce the land value but would destroy our Managed Forest Law objectives that we have implemented. Additionally, this project would be an invasion of our privacy (hunting and other recreational activities) that certainly was not wanted or anticipated when we purchased the property. Our dwelling on this property is utilized for these purposes as well. There are also several cabins within a short proximity that would unnecessarily be affected by this project.

Given the proximity to Highway 141 from our property, we strongly suggest the power lines be placed in that corridor because of the existing right of way already in place along with the power lines that are currently there. The path of least resistance would be HWY 141 and your existing line to the west.

Given the depressed real estate market at this time, a project like this brings concern and disdain to my wife and I. I hope you will consider our concerns and objections in your decision making, and I look forward to your next open house. Should you have any questions feel free to call me at the number below.

Thank you for your time,

Joseph and Dawn Calarco

Subject: Bay Lake Project - Pembine

Good morning.

My neighbor attended one of your informational meetings and received a detailed map of the 3000+ foot swath of land that could possibly be a part of the project.

Can you please e-mail me a copy of this map. I am located in Pembine - on county OO.

Thank you

I spoke at length with David Hovde today (5/2/12) and I'm writing to reiterate my concerns that:

1. affected property owners be notified in writing and in a timely manner as this process continues;
2. decision makers realize the impact that these huge transmission lines would have on small property owners of 5, 10, 20 acres. In point of fact small property owner would find their property virtually worthless.
3. benefits, if any, to residents here in Pembine and surrounding communities be stated such as increased service reliability, etc. Likewise if there are liabilities such as increased costs that those too be stated.

Thank you, Bruce C. Meinholz

I own 20 acres on perch lake Rd. off of Holmes Jct Rd. in project area 2, potential corridor O107-2. I am very concerned about having power lines run across my small parcel of land. Is there a more detailed map available for this corridor as far as what the plans are for this corridor. I do not want to sell any of my property as an easment!

Please send me more detailed information on the chances of this potential corridor being used as a corridor for power lines.

I attended your informational meeting at Oconto Falls, Wis.
I did receive a map of my area and talked with your rep.
My property is in a residential area with many neighbors.
I feel it would be better for your company to follow the high way which is about 30 acers west of my property.
Thank you.

Why not stick to A595-2. You already purchased land & have it cleared. Other areas your taking way more farm, wooded, wetland and even a trout stream.

Dear ATC,

I received your letter dated April 26, 2012, placing me on notice that the new power lines may affect property I own. After review of the map you delivered to me and after a thorough visit and discussion at the Crivitz open house, it is clear that one of the planned routes (O105-2) cuts across my property. After inquiring as for the reason why this potential corridor cuts across my land, I was told it was because of an existing airfield called the "Frievalt Airstrip" on your maps. I want ATC to know that I do not believe that so-called "Frievalt airstrip" is active:

- 1) I have not witnessed a plane take off or land from that airstrip
- 2) The satellite images provided at our ATC meeting in Crivitz showed no identifiable airstrip - only agricultural fields.

The ATC reps at the Crivitz meeting noted my concerns; however they encouraged me to officially note this comment for your review. Therefore, I request that you review the activity and validity of the "Frievalt Airstrip" and communicate this inactivity to the FAA and have the proposed corridor (O105-2) changed to follow section lines so that it does not cut across my land.

I purchased this land over 10 years ago with the intent to build a home on this land. If this corridor is chosen, it would jeopardize my rights to build my home on my land as a direct result of protecting what I consider an inactive airstrip. I view the building rights given to landowners far more important than a nearby landowner's right to take an occasional pleasure ride in a plane off an inactive airstrip. Please also note that when I purchased this land, there is a deed restriction in the agreement not to sell until a sunset provision is met. I view the sale of a right of way as violating that deed restriction - this cannot be jeopardized as well. If the proposed corridor is chosen as currently laid out, I will likely seek legal counsel to protect my rights in the state of Wisconsin.

To discuss any of the above listed items, I may be reached at the number listed above.

Sincerely,

Peter Gusick
Landowner

Comments:

We own farmland and are concerned about the voltage as we have health and safety concerns. Our land is used for crops and we don't want anything going across it. If it does have to go, we would prefer it to go on the west side of our property line as there are less houses there. We also have Grand children and have health and safety concerns for them also. Very opposed to route.

U60-2 - the highway 141 around coleman; or A600-2 - already existing line & right of way seem to be better oprions than disrupting neighbor hoods a long p80-2 which appear to be the 13th Rd lines through coleman & pound. The highway right of way hasn't been built up yet, so there should be minor upheaval.

Depsite your reassurances, I'm sure you're aware of the high incidence of MS in homes under the power lines in the Village of Coleman. This is not inspiring confidence in neighborhoods along your potential routes. Instead it is adding to already normal concerns.

Property is Along SEGMENT U60-2
PAGE AJ10

I HAVE LIVED ALL my life on the 120 ACRES MARKED LEWIS, PATRICIA J. AND SOKOL, FRANCIS L. in the town of Pound. I think you REFER to it as AJ10 in your project Book. It was at one time a GREAT PLACE to live. QUIET, PEACEFUL - good hunting. Then the town repaved N17th Road and took an acre of my land to straighten out the road. It's still not straight - But the Chairman was happy. Then, Hwy 141 came through and took another 16 ACRES. Went Right over my DEER stand, cut the farm in Half. AND The traffic makes a wonderful 'Airport' Sound that you NEVER get USED to. AN OVERPASS on Hwy Q took Another 1 1/2 ACRES. FOR The LAST 2 YEARS WE fought the town to keep them from WIDENING N. 19th RD. - I think WE MAY have won that BATTLE. Now the NEXT Bully MOVES IN AND wants to decimate our property even MORE. I Know WE can't BEAT you - you will just take whatever you want. I Think writing This is A WASTE of time. I Think you HAVE ALREADY PICKED your ROUTE AND AS for the PROPERTY OWNER You couldn't CARE LESS.

There are 4 of us who just bought 40 acres a year ago. It was owned by David Chucka and numbered P290-2. Our main concern is worrying about losing the seclusion of the property. Right now it is accessable only by driving through the driveways of neighbors. Also, a neighbor dairy farms along the proposed possible corridor and is concerned about stray voltage for this farm. It would make more sense to me put the new line next to either of the existing lines.

I am affected by P380-2 and I strongly object to this route. It would have a negative effect on the environment, since so many trees will be removed.

I intend on retiring up here. I'm concerned these transmission lines will have an impact on my health, over time, due to exposure to radiation. Isn't it more practical to follow the existing corridor line A125-2, which is just a half mile east.

Sincerely
Donna Blum

Reasons for our concerns regarding Segment P380-2

- 1 - Existing & still used runway for landing planes.
- 2 - Existing wetlands on our acreage.
- 3 - Loss of our complete lot owned on Alder lane Pacel 030.01538.000.
- 4 - Security of our land & expense of fencing for privacy.
- 5 - Loss of large trees & wetland where the line would fall.
- 6 - We have the racetrack on our right side w/ noise every wknd., during the Summer mo., along w/ concerns over an open area for ATV's on the Left side.
- 7 - Loss of resale value because of the high lines over our land.
- 8 - Health concerns driving under the power lines everytime we enter our land.
- 9 - Why can't they follow the existing route to save trees & wetlands, because of "sensitivity areas" on the existing route. We want to know what is "sensitive" in those areas causing you to leave the existing route?

RE: Bay Lakes Project

I attended the open house on October 9th in Green Bay and was able to get a better understanding of the project. Now that I am clear that only portions of the proposed routes will be selected and that the routes will be much narrower once revised, I would like to give my final comments.

Our property is at W11715 Darrow Lane, Athelstane. We are on segment P830-2. As that segment would significantly impact ours and many others' small acreage properties (1-2 acre parcels), it would be much less disruptive to property owners in the area if you selected segment A125-2 (where current lines exist) as your final route in this area.

There the route takes up only small portions of the larger (40 acre) properties. We ask you to choose the existing route A125-2 as your final route through our area.

Sincerely,

Tim & Sharon Zolp

Subject: Questions/Concerns on Bay Lakes Project

To Whom It May Concern:

Our property at W11715 Darrow Lane, Athelstane, WI is around the intersection of Segments P380-2 and C497-2 on your interactive map showing the current proposed routes for the Bay Lakes Project (east edge of the Town of Silver Cliff just south of Hwy. C). In addition to a large number of seasonal residences both north & south of Highway C, there are a number of high value permanent residences off the end of Darrow Lane and off of Highway C (several in the 200-300K fair market value range). The west edge of our property line is Willow Lane (which appears to be the west edge of the proposed route), and our property is 242 feet wide east/west, thus the entire property is in the yellow shaded proposed project area. We have a number of questions/concerns:

Why must there be 3 north/south corridors for the project in this area? Is there a chance that not all 3 north/south segments are required for the project?

Has the value of properties been considered in the selection of preliminary routes? As mentioned there are a number of permanent residences with higher values - as most of these people are neighborhood friends, we will throw out some last names in case you want to study these further (Seehawer, Georgia, Savage, Naud). Additionally there are numerous seasonal residences with permanent structures on the proposed route. If the proposed route becomes the actual route, this must add complexity and cost to the project.

What are the possible outcomes if my entire property is within the yellow shaded area (proposed route)? Complete buy-out of my property? Easement on part of property? Please describe the possible scenarios.

If segment P380-2 were moved a mile or two to the west (towards Camp 10 road), we feel there would be much less disruption and cost. There are very few residences there, mostly unimproved land, resulting in a lower project cost. Was this considered as an option?

We urge you to consider moving these proposed routes to another area where fewer homes will be affected. We will try to attend one of the open houses, however travelling from our primary residence by 7 pm on a weeknight may be difficult. We look forward to a response that directly addresses our questions and concerns.

Sincerely,

Tim & Sharon Zolp

Our property is around the intersection of Segment P380-2 and Segment C497-2 on the east edge of the Town of Silver Cliff at W11715 Darrow Lane. In addition to a number of vacation homes, there are some higher value permanent residences off of the end of Darrow Lane and Highway C. We have a number of questions/concerns:

- 1) Why must there be 3 north/south corridors in this area?
- 2) What does it mean if my entire property is in the yellow shaded area? Would it be a complete buy-out?
- 3) If segment P380-2 were moved slightly to the west, there would be a much lower number of residences affected (and lower cost to project). Was this considered?

We urge you to consider moving these proposed routes to another area where fewer homes will be affected. Look forward to a response.

Thank you,

I have several properties in Crivitz, WI along County Forest Rd 1630. Are my properties that front that road in question of this transmission line? the maps you gave is very rough at best to show possible corridors. I will not be able to attend any of the meetings as I reside in Nevada & my properties are there and 1 of them have my vacation home on it. I have 3 properties that front County Froest Rd 1630. Please email me anything you can that more specifically show possible routes that effect my properties & any other info. Also all info from the meeting that will be held on Wednesday May 16 at Shaffer Park Resort & Supper Club as I will NOT be able to attend. Thank you.

Re: Segment P380-2 in Town of Stephenson, Marinette County This area should be an environmental concern. It has areas of dense cover vital for wildlife, as this area has been more & more developed, taking away habitat. Also through my land, and many others, runs the Eagle Creek, a class I Trout stream, putting the quality of that in jeopardy as well. Thank you, Trent Allan

Concerning your route thru Crivitz I am in section M70-2. I am hoping you will not come thru the back of my property to by-pass Crivitz. We have two cell phone towers near the Highway so this line will be effected by this line. Also why can't you use the line corridor on the Highway or use the gas line ocrridor that goes North & South? I hope your 345-KV line is thought over good that it will not effect too many customers. We do have a lot of area west of Highway 141 for you to use. Thank you

Use established roadways and byways that are already in place There is no reason to use more forest lands, there are enough pipelines and room on those pipelines for further expansion.

Comments:

I am very concerned to find out that my property is in the proposed project area. We have heavily wooded lots and a cabin we are planning to retire to and would be very upset to have any of that disturbed. I don't understand how you could be considering going that far to the east of Hwy "A". Since we are not able to attend any of these mid week meetings due to our work schedules and the fact that our primary residence is 200 miles away, we need to have a few of our questions answered. Please advise us exactly how far down Tadisch Lane this project will extend and exactly where our property would be affected, if at all. When would this project be expected to begin and end? Would it not make for sense for these lines to parallel closer to a major highway such as 141 rather than disturbing alot of residential private property?

We have 40 acres of recreation land and only 12 acres of high land - rest is swamp. We have a pond & trailer on the ridge and want to build a log home on the ridge soon - Power line would be devastating and a health Hazard to my wife. Please consider all other options!

Now since the media frenzy is calmed. Can I get more information on where exactly you are proposing to run a line in crivitz wi. we have a property at 11460 Schramm Road. Will these power lines be over our cottage? I tried calling the toll free number and got only general answers which did not answer my questions. Please answer in as much detail as you know on the property.

I don't think it is a good idea to go with the line through my property. If you look at a plat book going to the west of the exsisting line there is County and State lands. The proposed route goes over a number of homes. The State and County lands to the North of Cty C and West of the power line already there makes more since. I hope you will consider this route.

Thank you.

WE ATTENDED THE OCT. 4 MEETING AT THE WOODS. WHAT A WASTE OF TIME! YOUR PEOPLE COULD NOT TELL US IF THE LINE WOULD BE ON OUR PROPERTY. THEY COULD NOT TELL US WHAT KIND OF POLES WILL BE USED. I BUILT MY HOUSE WITH LOTS OF WINDOWS SO THAT WE CAN LOOK ON THE ROLLING KIRBY HILLS. I DO NOT WANT TO HAVE THAT VIEW BROKEN UP BY BIG INDUSTRIAL LOOKING POLE. IF YOU "TAKE" MY LAND FOR POLES, THEN WHAT IS NEXT? THE ELECTRIC COMPANY WILL WANT TO PLACE BIG WIND TURBINES ON THE HILLS.

Comments:

I live at P170-2 and also P180-2. I believe a better route option would be Smith Creek Road. There is a natural trout stream and several homes that it would impact if it went where you now have it shown. A good part of the yellow section is swamp land. There are more homes in the yellow section that aren't shown on the map I was issued.

We own the property on the southwest corner of Highway A and Horseshoe Ln. It appears that the projected power lines will be located across the road along the east side of Highway A. How final are these plans or is there a chance that these could change and the lines be put in on the west side of Hwy A where our land is located? We have not been able to attend any of the meetings so any information you can provide will be greatly appreciated. Thank you! Dennis Dommer

June 5th, 2012

To whom it may concern at Bay Lakes Project:

My name is Harry Dudkiewicz (Butch)

It has recently come to my attention that your company has made a plan for a potential corridor for a electrical wiring axes which I see would go through property that I have made a substantial investment to. I lease the property of, Patricia Pucel, with a signed legal agreement to rent this property. I have recently drilled a well and put up Irrigation Towers with irrigation pivots to improve the land quality, my harvest quantity and to hopefully improve the all around out come of this property.

As I look over your proposal map. I have noticed that this said property is on your Potential Corridors map. I am asking you to reconsider this direction of C397-2 of your map and not use this corridor but to possible change them to West of County rd. P were there is no farmland. I see that there already a corridor in A.95-2, so wouldn't it be better to put it were there is an existing line already?

You want feedback on the impact this would make on landowners. This land is a crucial part of my life and would be a devastating impact on my family and myself.

I have invested a lot time, money, and sweet to improve this property. To have it separated by wire lines going through it after all we have done would surely have a horrible impact.

We cleaned up fencing and cleared tree line's it has taken a lot to do. We have made this property passable for the irrigation pivots to go more than 3/4 of a circle around the field so I could irrigate my crops. By putting these lines through this property, it would defeat the purpose of having these pivots I would not even be able to go half way around the field thus making the pivots useless and quit a disaster of my life's investment.

I am asking you to reconsider your direction of your corridors so I can remain farming this property and finally, enjoying my life long dream after 35 years of farming and investing to finally using irrigation pivots to water my crops.

Please feel free to call me 1-715-927-8252 Thank you for your time.

Sincerely Yours

Harry D. Dudkiewicz

Apparantly my familys property is threatened By a possible transmission line running from Oconto to the U.P. A main reason is Because we don't have many buildings on the property. My parents gifted that land to me many years ago. My plan was to preserve the property and Build a small cabin to enjoy with my family when we saved the money. The property will not be worth a fraction of what it is now. Please I urge you to reconsider this option. We already have a transmission line running North a few miles away. Can't we utilize this space? I spent my childhood hunting and playing on this property. Some day my family and I hope to re create thoes memories with my children. I understand people need power. But lets not run it over my head. Thanks for reading Matt Erdmann

I can't imagine that anyone wants the transmission lines going across their property. For people that love nature and natural landscape, they will be an eyesore. We bought our property many years ago with a plan or dream in mind: We would put up a home and retire in the beauty of the North Woods. We have been fortunate to do just that. Our place is not a cottage. It is our home. Over the past 20 years we have planted thousands of trees, cleared out deadfall, and groomed our property. We love the seclusion and privacy. Your project, should it go through our land, would totally ruin our beautiful setting. Why not put the lines along existing power lines or along highways? Please do not lower our property values and destroy the beauty we have worked so hard to create. There has to be a better answer. Thank you.

N9685 County Highway X
Crivitz, WI 54114
October 19, 2012

Office of Governor Scott Walker
115 East State Capitol
Madison, WI 53702

Dear Governor Walker:

My wife and I are residents of the Town of Stephenson in the area better known as the Peshtigo River Flowage West of Crivitz, WI.

We were recently notified that the American Transmission company intends to bisect one of our eighty-acre parcels with a high voltage power line. Equally disturbing is a projected route along County Highway X, which is the main route to the Tommy Thompson State Park. While representatives have told us that these are projected routes, we were not encouraged that our objections would negate their recommendations to the Public Service Commission.

Our family has owned this land and paid taxes for 80 years with no subsidized programs through state or federal governments. We have preserved these 262 acres for years as a hedge to our retirement. Now we are informed that an appraiser of their choosing will tell us the worth of the property they will use for the transmission line. The land projected to be divided would lose tremendous value and prohibit development as a result of these high voltage lines.

West of the Froehlich property is a Town of Stephenson 80 followed by land to the north which is uninhabited. We have requested that they run the high line through public property, which already has communication towers.

Attached are maps of our property plus the proposed route of the constructed high line. Hopefully either you or a member of your staff can provide oversight of this dilemma and advise us whether we can preserve our property, which is our major asset.

Thank you in advance for reviewing our difference with the American Transmission Company.

Respectfully,

Josephine Froehlich (signed)
Robert B. Froehlich (signed)

Robert and Josephine Foehlich
N9685 County Highway X
Crivitz, WI 54114
October 13, 2012

We attended the information meeting at the Woods' Supper Club on October 4, 2012. After visiting with members regarding P390-2 we can't understand why this line is projected to run through the middle of our property, when C460-2 runs through public property and an existing easement. Not only does this preliminary draft bisect our property, but also would be routed through several areas classified as wetland.

Our suggestion would be to run this line through the Town of Stephenson West of our property now shown as a possible route. There is nothing on the town property that would prohibit the line from being constructed. Furthermore, the land North of the Stephenson 80 acres is undeveloped and clear of homes.

According to the map outlining various routes, the line eventually runs west after the dog leg pass through our property. Why not keep the line West of our frontage on County Highway X and through the middle of our rectangular parcel?

We would appreciate your acknowledgement of our position regarding the transmission line and further discussion as the project moves through the planning stages.

Thank you.

Respectfully,

As a land owner in Northern WI I understand the need for power and the ability to move that power. I own land on Tadisch in which intersects with cty hwy A 4 mi south of Athlestine. Tadisch In runs east from hwy A. My only concern is acording to the map a potential coredoor runs on the east side of A south of to Athlestine. It would make more economical, social and environmental sense to run on the west sid of A because it is less wooded and less populated.

Comments:

We object to the proposed high voltage electric transition lines coming through and/or near our property, which is located east of Hwy. 141, in the Town of Stephenson, and to the east of the village of Crivitz.

The cleared farm land is only 40 acres and is needed by a local farmer, and also furnishes us with rent income.

We have the privilege of owning pristine wilderness located just outside of Crivitz and hope to keep it as a sanctuary for wildlife of which we have numerous species of animals and birds. The dead trees we use for firewood and provide us with valuable exercise during the harvesting process.

Joanne has had cancer and it is stated by the National Cancer Society that one is possibly at a higher risk for cancer where high voltage power lines are present. Trees and farm animals do not thrive; hence their production and health are affected. A study was done in West Virginia to find the reason for the prevalence of cancer in an area. Sixteen cases were found to be along high voltage power lines.

The value of our home and property will be lowered considerably and it would be difficult to find buyers. We have owned this property for over 30 years, have made many costly improvements, and hope our lifetime values and goals don't go up in smoke.

Comments:

If Segement P390-2 is selected as one of the routes the line should be placed on the eastern portion of the segement to avoid the new subdivision that was built on the western portion. I would prefer that segement that runs along the exisiting high voltage line (A95-2. A97-2. etc) be the selected segement.

The current sub-station located on High Falls Road is boarded by our property. Please tell me what land impact I may be subject to and when?

Thank you

After taking eight years to find property we are happy with, we have only owned our land for three years. We have a cabin on our land that we enjoy staying at when we are vacationing, hunting, and fishing. If you choose to put the electricity through our land, you will destroy our hunting grounds. We have beautiful woods and would like to keep it this way.

Subject: Routes for the new electrical transmission lines thru Crivitz!

I am e-mailing you concerning the routes for the new electric transmission lines coming thru Crivitz, WI.

The map does not show exact locations and the yellow lines are quite wide.

I have a 6+ acre parcel off St. Paul Road on Cora Lane with a new 10,000 square foot brick home.

Obviously I wouldn't of built it there had I known a Transmission line would be hanging over my roof!

I am deeply concerned how these electrical transmission lines will affect my property value.

Will ATC be compensating me for lost property values?

I do not know why you can't use existing corridors that you already have in place west of Crivitz, or why you can't run the lines up Highway 141 where it won't affect any homeowners.

There are a lot of houses and people living on both sides of St Paul Road.

Please clarify what your intentions are and do not suggest that I attend one of your Open House Locations as I travel out of state for work Monday thru Friday.

Sincerely,

Michael Kaldenberg

Comments:

I live on the corner of County roads X and A and I am not in favor of this route going past my property as I live close to road. My concerns are health, welfare and safety.

Concerned about my property values. It's my feeling that there is a corridor west of me about 2-3 miles that is being currently used and this would be a more appropriate route and could be used in a safer manner. My suggestion of the preferred corridor/route is NOT TO BE C433-2

American Transmission Company
Re: Bay Lake Project

Comments: Property Owner James A. Kegel @ W11599 Eagle Road

As an affected property owner within the proposed Bay Lake Project corridor it has been brought to our attention that the initial proposed route will negatively affect multiple property owners for which we are one of them.

As it has been described to us, this proposal will restrict property improvements by all of the owners along the Eagle Road/North Old Trail Road corridor. By placing the transmission line corridor along this proposed route the ATC will effectively DEVALUE multiple property owners.

The affected properties were purchased as an investment for our generation and our future generations. By placing the transmission lines through the proposed properties it will severely limit our ability to develop, hunt and/or increase the value of our investment.

Understandably, a new corridor is necessary to service a larger population in the multiple counties, but our recommended advice would be for this project to use the undeveloped state owned DNR land west of our developed property or an alternate route.

It is our recommendation to reconsider placing the Bay Lake project in this proposed location. An alternative route via the undeveloped state owned DNR land would provide the ATC with a less impacted corridor to service the increased need for power and mitigate the negative impact to this larger group of property owners.

Notification for any future discussions needs to include all of the proposed property owners. As of this date we have not received any formal notifications. I question why we have not, considering our designated mailing address for power and taxes are appropriately recorded.

Any and all future proposal MUST include all of the affected owners. Please update your notification mailing address to include us.

Sincerely,

Mr. & Mrs. James Kegel

A transmission line at this time on my farm would limit in the future where I could expand. Due to large medical bills for my wife the only thing I have to get cash out of is my farm. I sold a farm in West Virginia and had to take a cut in value due to a large transmission on it. I am getting to old to keep starting over.

Thank you

Frank Keplinger

Comments:

Concerns are: Land Value

2nd concern- Health issues!

Moved away from power line because of cancer (wife had rare form) . American Cancer Society had done studies saying other women that lived close also had this. If the power line does go through his property- wis wife will leave and live elsewhere because of her health and he will be left to work the farm. His insurance company has canceled their insurance because of health reasons and their property is all they have.

I would like to tell you how I feel about the transmission line. I am in the process of trying to sell my house I need to move closer to my job. Some of the people who looked at house are now putting the brakes on. They are conserved about the transmission that could posible be in there view. The recission makes it hard to move a house but the line is a blow to the process. Its not fair for me to loose money for the sake of progress. The card said you wanted input on this project and here is how I feel.

Thank you

Subject: FW: New transmission lines going north

20 May 2012

American Transmission Company
801 O'Keefe Road
De Pere, WI 54115-6113

Dear Sirs:

I am writing in concern of the purposed building of the new power grid that is to be placed north. We attended your meeting at Shaffers Supper Club on Wednesday May 16, 2012. We feel that we did not get very straight answers at the meeting. Thirty years ago we lived in West Virginia our property adjoined one of these high transmission lines. I came down with a very rare form of Ovarian cancer with no family history of that cancer. The University Hospital Ruby Memorial felt that this type of transmission power line could have very well contributed to this and many other forms of cancer as well. Some time later another lady had the very similar type of cancer and symptoms' like mine who just lived on the other side of the hill adjoining the same power line. We and several others tried to sell out and had a terrible time selling out and got very low property price out of our homes.

We have been living here in the Crivitz's area for the last twenty years. I and my husband Frank have started a small horse business to help us in our retirement years, so we can continue to enjoy living in a pristine community. We are really hoping to have a good working horse business that will take care of ourselves in our retirement years. Our horse clients have expressed concerns about having their animals under this type of transmission lines. They have informed us that this is not acceptable to leave there animals in this type of conditions.

Your proposal of lines would come right through the middle of our dreams; we could no longer build additional barns to house more animals in the field because of the transmission lines that would go through the middle of our farm. We have lived through this 20 years ago and we do not wish to go through this again.

We feel that the building of these transmission lines would darken our future. So please do not take away our dreams and our health.

Concerned Land owners,

Frank and Lucille Keplinger
W7618 St Paul Road
Crivitz, WI 54114

The route you propose will take down parts of our northern woodland, not to mention property that hold many memories I watched as a little girl the work my father, now deceased, put into his land giving us a place to vacation We had yearly pictures taken by the tree plantation dad had planted. Please spare our trees and leave our memories, and the fourth generation will continue to make more memories and plant more trees.

Reject the plans for project area 2 Route P390-2

It is my sincere hope that this project does not involve our property. My family & I do not want a tower or high voltage lines located here. This land has been in my family for over 40 years. My dad worked so hard to purchase it when I was a little girl. It is treasured by my family. My husband & I built our home here 25 years ago. In approximately 8 years we intend to build our retirement home on the land directly west of our existing home. The southern parcel (across from our home on Old W Road) we've always planned to keep wild & natural as it's been all along. We want to preserve the integrity of the woods as it is. We enjoy all of the wild life we see here, & want to conserve the beautiful forest & not destroy the wonderful wildlife habitat it is. We feel a tower on or wires crossing our property would absolutely destroy the forest with the clear cutting involved in such wide right-of-way areas; as well as ruin our property value. We are also extremely concerned about the possible ill effects on our health with living so close to such extremely high voltage. Thank you for your time & consideration.

Sincerely,
Heidi Kroll

I am deeply upset to learn of your 5 proposed power line routes. We have been clearing/improving our wooded acreage since 1977. We have been cutting dead fall, controlling erosion, and have planted well over 10,000 red and white pines. We have loads of forest animals that visit our feeding station daily. We have created a "bear haven" or safe zone for the many black bears in our area. Your powerline would destroy our 35 years of work. We bought our land because we wanted to have a "natural" setting - not look out our windows and see power towers. We would lose so many trees that we planted - that means less wildlife - not what we want to happen. Our family's grandniece has had a bone marrow transplant - this land invasion could put her at risk. I understand the idea of progress - but this proposal would be a huge set back for us. Land values will plummet and who would buy land with power lines on it? Please consider using the existing power lines down further. That would make more sense. Don't disturb my sanctuary!!

Subject: Baylake Corridor

I have some land in Middle Inlet and town of Stephenson at W9249 Camp Five Road. Will my property be affected by this corridor. Is it included in the easements that are needed. Please let me know as soon as possible. Thank you.

Subject: Questions

Hey,

I cannot find how I am affect exactly on the map provided. I am guessing that you are proposing to cut through my property from north to south on either P390-2 or A120-2 but I cannot tell where specifically it is proposed to go through. I am guessing P390-2. My property is on Molly Four Lane in the Town of Stephenson at W11036. The only blue ¿potential corridors¿ around my property run north and south and yet my neighbor north of me said he did not get a notice about this project? Please give me some more details so I can make specific comments to be heard.

Thanks,
Paul Lotto

Subject: Questions about project

Hey Kelly,

You responded to my neighbors questions about the project possibly going through our properties and I was hoping you could answer some questions I have. If not, could you direct me to the correct person to ask. Here are the questions I still have.

1. I know they said they will narrow down the choice by October, does that mean to the final route of the actual 150 foot corridor? If not, when will the final route be determined?
2. When it is determined if it goes through my property how will I be compensated for my property? How is the value determined?
3. If it does go through my property how long will I have to clear out my property?
4. Will I be able to take anything valuable from my property since I expect you will only demolish the building? Example, cupboards, toilet, sinks, doors, etc.
5. If I want to suggest going west of my property to save money, since there are far less houses to the west, where do I make that suggestion?

Thanks, I would appreciate any help you can give.

Paul Lotto

I am writting in regards to my land located at N10631 Doe Ln in Athelstane WI (P390-2) which is one of the preliminary routes. Not only is this upsetting due to the fact I have worked 18 years on getting my land to where it is; planting thousands of trees, providing an environment for wildlife, the financial cost of upkeep & not to mention this is my home. My understanding is that there is already an exsisting corrador located at A125-2. In my opionion if the area that I am in has conflicts why can't ATC use that? I understand the importance of electricity but to come through an area with many homes seems unreasonable. Ive worked hard & plan on keeping my land in the family but doesn't seem feasable with powerlines running through. Not only are they eye sores but the health concerns are huge! I understand these lines have to go somewhere but please reconsider putting them here & use the exsisting corridor.

Thank you

There is a cemetery on our property, as well as the remaining foundation of the original Smith Creek farm. The family continues to visit the grave sites.

This was the Smith Homestead property. There is also a creek (Smith Creek) that runs through it. This property is historical & pristine. It would be unfortunate to ruin this with power lines.

To: Palmer, Neil
Subject: power lines in athelstane

Neil,

Hi. Our neighbor up north came over this past weekend and filled us in on what he knew about the possibility of power lines being put on our property in Athelstane.

I am going to be honest the idea of that literally makes me sick. Let me explain. My husband and I purchased our land just before we got married.

We built our place from nothing. We cut down trees, pulled the stumps, had electricity put on the land and installed a well and septic. We then found a mobile home to put on the land. Then in 2009 we decided that is where we wanted to eventually be. We are tired of living in the city and love the quiet peacefulness of up north. We dreamed about coming home from work and sitting on our deck looking out into the woods and enjoying natures beauty. So we spent the \$ and built our dream home in 2009 up there. We currently have our city home (South Milwaukee) up for sale and plan on moving permanently in spring up north.

The thought of having that beauty that we so enjoy being destroyed by having the state put power lines on our property literally makes me sick to my stomach. Rich had said the state would "compensate" the land owners. There is no \$ compensation that would make this right. Even if they bought the land/house from us We would be loosing THOUSANDS of dollars. Lets say our mortgage is \$145,000. and that is what the state gives us. We are still out the \$15,000 we paid for the land that is not incorporated into our mortgage. We would also be out the \$10,000 on the deck we just built, 12,000 on the garage we built, \$8000 on the well/septic that was installed, \$1000 on the retaining wall we just put up etc.. In all honesty to just "break even" It would be about \$190,000 and I know that is never going to happen. I work very hard for my \$ and to have the state force me to lose thousands of \$ is not right. Even if by putting the lines in it does not interfere with the home and the state says we can still live in the home, the thought of leaving the city to get away from all of this and then having the state force this on us is in my eyes not right.

I know there is probably nothing you yourself can do as the state is like the DNR.. they have more power than God. But it just sickens me how they can destroy people dreams. I am hoping that if they have to use our properties that they can place the line on land that does not have homes on it and if they must that the lines are as far away as possible from the homes.

Please forward my email to whomever at the state is making these decisions. I want them to realize the damage they are doing to those of us who have saved most of our lives to build our dreams and that they will be destroying all of this by running lines through this area. Now all I have to look forward to is coming home from work and sitting on my deck and look our into the woods and instead of peace and tranquility I get to look at power lines. \$ can not make this right. We will end up selling the home if this is what happens and the sad reality is we will be out the thousand of dollars that we have put into the property on our own and we will be LUCKY to even get what we owe on the land as who is going to even want to buy property with power lines running through it. Again I'm physically sick at the thought of what the state may be doing to our dream. Please keep me informed of any updates on decisions that are going to be made or of any meetings that will be happening, the earlier the better as I would need to make arrangements with work to try and attend.

Bay Lake Formal Comments - Additional Comments by County/Municipality

Thank you for your time and listening to me. I hope you or someone from the state will read this and realized the emotional and financial hardship that they will be causing us by running lines though our properties.
Have a great Holiday,
Sincerely,

Larry & Vanessa Mueller

Subject: Land offer

Your Project map dated 4/11/12 shows a new sub-station located west of Crivitz on the Peshtigo river, it is on the existing power lines between the marks of (A 500-2 , A 490-2). These transmission lines travel through my property, this property is 3.5 acres, it begins with river frontage an goes west to the streets named ȳHydra court and Jankowskiȳ. Several years ago your company purchased an easement across this land to access the lines to the river. If there is an interest in purchasing this lot to serve as an entrance, or for the physical location for this sub-station I am open to discussing it with you.

American Transmission Co. if you put this where you purpose, it would ruin our property and we would have to drive under your lines all the time.

A few years ago we had to give up land as the lines went along our property know as Riverside Ranch, under the name Charles & Diana Kostreva. I feel we have given enough. Can this be put along the line west of Riverside Ranch, not along a county road where there is houses.

Howard & Diana Nelson

(X7 Segment P390-2)

We have been reviewing the proposed P390-2 route. Our property is a subdivision in which a power line going through would make what we have developed much less marketable. On the property east of us, there are many landowners and structures that would be impacted along Molly Four Rd and Max Lane. I have spent some time reviewing the interactive map along the P390-2 route and I plan to do the same for the other proposed parallel routes. If the P390-2 route is chosen, the map seems to indicate that less physical structures would be impacted. We plan to do more research and send more comments.

Hello, My wife and I own parcel 032-04414.000 (since 1978) and are also 1/8 owners of parcels 032-04411.000 and 032-04421.000. We had received letters last year but they did not show our area as part of the proposed project. And in the fall of last year we received a letter stating that we were no longer affected by this proposal and would no longer receive mailings. My father, also and owner of (2) parcels and 1/4 owner of 04411 and 04412, and I found out that other owners of our property had received letters stating differently. Segment P380-2 runs right on our western property line and also cross the southern edge. What is the current status of this proposed project and how can we be heard? We did not go to the meeting in October because from what we had received we were not in the area affected. Thank you, Scott G. Nielsen

American Transmission Company, LLC
Bay Lake Project Comments
Segment A110-2

To Whom It May Concern:

ATC Proposed Bay Lake Transmission Line Segment A110-2

We are writing to voice our concerns about the American Transmission Company, LLC (ATC) Proposed Bay Lake Transmission Line; in particular Segment A110-2, located in the Town of Stephenson, Marinette County, Wisconsin. We received a notice via U.S. mail concerning this line and we are very concerned with the proposed location of the transmission line, as it is located in close proximity to our summer dwelling, constructed for our retirement use in 2008. A site location figure of our dwelling is included for your reference.

We understand the need to increase electricity capacity and electric reliability but the location of the proposed Segment A110-2 does not make sense for many reasons, for which we will outline below:

Social

¿ As proposed, the ATC Bay Lake Transmission Line Segment A110-2, if constructed, will unnecessarily impact a total of 22 dwellings. In most cases, these dwellings have already been burdened with the existing 345 kV single circuit H frame and associated 150 foot cleared corridor. The addition of a transmission line adjacent to the existing transmission line will require the complete removal of dwellings and at a minimum, will negatively impact the remaining dwellings.

In addition, the corridor would be increased from the existing 150 feet to 300 feet of completely cleared transmission line corridor. 300 feet of completely cleared transmission line corridor is the exact opposite reason the residences of this area purchased this property. All of us purchased our properties to get away from cleared corridors and enjoy the north woods of Wisconsin.

¿ Enough. ATC already has significantly negatively impacted the aesthetics of the surrounding area with the existing 345 kV single circuit H frame and associated 150- foot cleared corridor. The addition, of an adjacent transmission line and cleared corridor will significantly decrease the surrounding aesthetics and decrease the property values. One transmission line is enough.

¿ In addition, the proposed ATC Bay Lake Transmission Line Segment A110-2 is directly adjacent to the Town of Stephenson Park and Boat Landing Facilities located on the High Falls Flowage. This flowage is an extremely popular flowage and is heavily used by summer and winter recreational enthusiasts. The Town of Stephenson Park, in our educated opinion, is the most popular park on the flowage. Individuals use this area for its proximity to the flowage and natural surrounding woody vegetation. The proposed ATC Bay Lake Transmission Line Segment A110-2 if constructed, will negative impact the aesthetics of this heavily used recreational site.

Environmental

¿ There is an active osprey nest is located on the existing transmission line. Avoidance measures

will have to be implemented if this route is chosen.

¿ If segment A110-2 is the chosen route, than it will impact an approximate 10 acre pond. The pond is currently adjacent to the existing transmission line and if this segment is chosen and placed to the west of the existing transmission line, then it would be constructed directly above this pond. This pond is frequently used by migratory waterfowl and other migratory species.

¿ In addition, several invasive plant species are already within the existing utility corridor. These invasive plant species were y brought in through the construction and/or maintenance of the existing utility line. The invasive plant species that we have observed include; spotted knapweed, common mullein and leafy spurge.

If this is the proposed segment, than it would most likely lead to an increase in the population and spread of the existing invasive plant species and possibly the introduction of new invasive plant species. Being in close proximity to the pond and that transmission corridors are known as being vectors for the introduction and spread invasive plant species, we are concerned with the introduction of phragmites if this segment is chosen . This plant has remained out of the flowage and pond so far, but we are not sure if that will hold true if the segment is constructed.

Reliability

¿ We attended the open house held in Green Bay on October 9, 2012 and spoke with representatives from ATC. One of the main reasons, the ATC representatives provided for the need of the Bay Lake Transmission Line was for system reliability. We would like to point out that if system reliability was an issue, wouldn't it make the most sense to construct a new transmission line in an altogether different geographical location?

If a natural disaster occurs; such as a tornado, thunderstorm or windstorm, it is not likely that the natural disaster is going to destroy one transmission line, then stop or turn around and not impact the new transmission line located directly adjacent to the existing. It would make much more sense that the natural disaster would negatively impact both transmission lines

¿ In addition, have outages been an issue with the existing transmission line? And if so, are records of outages available for our review? We understand that we are on a distribution line served by that transmission line, we do not recall more than 5 outages since 1991 and the outages lasted no longer than 24 hours in length to get restored.

¿ If outages due to lighting are a concern on the transmission line itself, I would imagine that ATC does have an advance grounding system and could control most of these outages.

¿ Also, while attending the ATC open house held in Green Bay, Wisconsin. The ATC representatives indicated that a double circuit single pole containing two 345KV lines would not be the preferred option because Public Service Commission of Wisconsin and the National Energy Reliability Commission do not recommend this for long line spans.

The ATC representative did however indicate that a double circuit single pole containing two 345KV lines maybe an option for short spans, up to approximately one mile in length on any single new transmission line project.

Although, from a reliability, social and aesthetic aspect, the Bay Lake Transmission line would be far better suited to be located in an altogether new geographic utility, ATC should at a minimum, install a double circuit single pole containing two 345KV lines for Segment A110-2, if this route is chosen. 22 homeowners and several hundred recreational enthusiasts are already impacted enough by the existing transmission line and associated cleared corridor.

Please remove Segment A110-2 of the Bay Lake Transmission Line as an option, for the reasons outlined approve.

Sincerely,
Dennis and Kathy Nuthals

Our cottage address is 11401 Meedus Rd in Stephenson. Your existing power line runs through an easement on our property. Are you planning on using the existing corridor or adding to it? What additional clearing would you need to accommodate this project? Do you have rights to expand this with our current agreement?

There is an osprey nesting on the power line that we enjoy watching every year. What effect would this have on it?

What are the health concerns if you do go through our property. We are just retiring and plan on spending a lot of time up there. Our children come up all the time. I am very concerned about what health risks there would be for them.

I am sitting here looking over our beautiful piece of property and hoping you will reconsider coming through it with power lines. We bought this in 1993 and are considering retirement up here. It took us a long time to find it. We had our house on the market in hopee of moving up her some day.

Now we not sure what to do because of the unknown.

I am very concerned if you do come through our property what another 69 to 345 kilovolts of power would do to our heath and the health of our children and grandchildren who come up just about every weekend. You already have power lines coming through almost half our property which we received no benefits from. If you take another 150 to 300 ft we will have no where to go. If you do come through this area would you consider moving it more west as it will not effect as many homes & cottages.

As you can see we love it here and do not want to give it up.

Please see attachments. One thing I would like to add to this:

We are seeing a problem with trucks, 4 wheelers, golf carts and snowmobiles coming up the power line sometimes coming right through our property.

We have asked for signs, but have not gotten anywhere with it. If this power line is unsupervised, as the one by us, I question what kind of supervision there would be with another power line coming through by us??

¿Enough. ATC already has significantly negatively impacted the aesthetics of the surrounding area with the existing 345 kV single circuit H frame and associated 150- foot cleared corridor. The addition, of an adjacent transmission line and cleared corridor will significantly decrease the surrounding aesthetics and decrease the property values. One transmission line is enough.

¿ In addition, the proposed ATC Bay Lake Transmission Line Segment A110-2 is directly adjacent to the Town of Stephenson Park and Boat Landing Facilities located on the High Falls Flowage. This flowage is an extremely popular flowage and is heavily used by summer and winter recreational enthusiasts. The Town of Stephenson Park, in our educated opinion, is the most popular park on the flowage. Individuals use this area for its proximity to the flowage and natural surrounding woody vegetation. The proposed ATC Bay Lake Transmission Line Segment A110-2 if constructed, will negative impact the aesthetics of this heavily used recreational site.

Environmental

¿There is an active osprey nest is located on the existing transmission line. Avoidance measures will have to be implemented if this route is chosen.

¿If segment A110-2 is the chosen route, than it will impact an approximate 10 acre pond. The pond is currently adjacent to the existing transmission line and if this segment is chosen and placed to the west of the existing transmission line, then it would be constructed directly above this pond. This pond is frequently used by migratory waterfowl and other migratory species.

¿In addition, several invasive plant species are already within the existing utility corridor. These invasive plant species were y brought in through the construction and/or maintenance of the existing utility line. The invasive plant species that we have observed include; spotted knapweed, common mullein and leafy spurge.

If this is the proposed segment, than it would most likely lead to an increase in the population and spread of the existing invasive plant species and possibly the introduction of new invasive plant species. Being in close proximity to the pond and that transmission corridors are known as being vectors for the introduction and spread invasive plant species, we are concerned with the introduction of phragmites if this segment is chosen . This plant has remained out of the flowage and pond so far, but we are not sure if that will hold true if the segment is constructed.

Reliability

Bay Lake Formal Comments - Additional Comments by County/Municipality

¿We attended the open house held in Green Bay on October 9, 2012 and spoke with representatives from ATC. One of the main reasons, the ATC representatives provided for the need of the Bay Lake Transmission Line was for system reliability. We would like to point out that if system reliability was an issue, wouldn't it make the most sense to construct a new transmission line in an altogether different geographical location?

If a natural disaster occurs; such as a tornado, thunderstorm or windstorm, it is not likely that the natural disaster is going to destroy one transmission line, then stop or turn around and not impact the new transmission line located directly adjacent to the existing. It would make much more sense that the natural disaster would negatively impact both transmission lines

¿In addition, have outages been an issue with the existing transmission line? And if so, are records of outages available for our review? We understand that we are on a distribution line served by that transmission line, we do not recall more than 5 outages since 1991 and the outages lasted no longer than 24 hours in length to get restored.

¿If outages due to lightning are a concern on the transmission line itself, I would imagine that ATC does have an advance grounding system and could control most of these outages.

¿Also, while attending the ATC open house held in Green Bay, Wisconsin. The ATC representatives indicated that a double circuit single pole containing two 345KV lines would not be the preferred option because Public Service Commission of Wisconsin and the National Energy Reliability Commission do not recommend this for long line spans.

The ATC representative did however indicate that a double circuit single pole containing two 345KV lines maybe an option for short spans, up to approximately one mile in length on any single new transmission line project.

Although, from a reliability, social and aesthetic aspect, the Bay Lake Transmission line would be far better suited to be located in an altogether new geographic utility, ATC should at a minimum, install a double circuit single pole containing two 345KV lines for Segment A110-2, if this route is chosen. 22 homeowners and several hundred recreational enthusiasts are already impacted enough by the existing transmission line and associated cleared corridor.

Please remove Segment A110-2 of the Bay Lake Transmission Line as an option, for the reasons outlined above.

Sincerely,

Dennis and Kathy Nuthals

Subject: Transmissions lines/segment C433-2

I am contacting you to voice my opposition AGAINST this transmission line going thru or near my property located on County Rd A north of crivitz WI, (segment C433-2).

The route following County Rd A north directly passes along infrastructure that would pose a serious threat to lives and property on this route. Two propane storage facilities are located just north of County Rd X on County Rd. A, and in my opinion this would create a triple threat to me and my family, friends and neighbors directly. The storage tanks alone present a serious concern for this neighborhood, and as for my self a greater one since my residence is less than 2640' from the first and less than 1320' from the other, as well their are other residence that are closer yet.

It's bad enough that these two units were 'snuck in' under the radar without public knowledge, approval or consideration, and now you want risk our lives and property even further by putting these high voltage lines over the top of them?????? or next to them, either way they present a clear and present danger in the event of a breakage in the line for some unforeseen reason, a concern that was made very clear to me at your open house. At any given time one or both of these sites may be leaking, venting, or receiving product with flammable residue present. In addition there is a low wet land area on County Rd X and County Rd A and north long the road that also would be effected.

On behalf of my family and neighbors that live along this possible route, I implore you to reconsider this location and the impact this will have on the quality and safety of ours lives as well as the impact environmentally.

Thank you for your consideration in this matter and please feel free to contact me for more information if needed, as well as keeping me informed as to the progression of this project.

Sincerely

Deanna Palek

I have a cottage on Jamie Ln. fire number N11209. I see on the map my property is effect by this project. I want to know how this will effect me. I just built my cottage 4 yrs ago. I am very concerned of what might happen. I litterally build it myself , I do not like what I see see so far. I need to know how this will effect me.

We are not interested in seeing another high line run through this area. it seems to me using the existing area where the lines run now would be less intrusive than patching it through and around homes that are here

This is a tourist area and we live here, Enough towers are already in Existance!

Not sure there could be health issues involved with these lines close to our homes.

We were planning on building a home on our property in Marinette County - W11177 Van Beek Rd. - township of Stephenson. We also have the adjoining lot on Parkway Rd. Are you taking our property? Due to a heart condition of my husband, I don't want to live by high powered lines. Is our property on line with you're plans? Our property value will plummet. We worked hard these past ten years, clearing land by hand and planting good trees for the future (instead of jack pines.). What are the plans? Where are the high powered lines going? - We have to know because it affects our future.

Your Bay Lake Project `interactive¿ maps (sent to me/online) are quite useless.

I would like a specific answer to how the project affects my parcel #032-02550.001 near Crivitz, Wi.

Are you planning to take any of my property?

If not, how near my property will the lines run?

What eyesore transmission poles/lines will be on or near my parcel?

How will this affect the dollar value of my land?

I would like specifics to the above and await your soonest reply.

Joan Riordan

My husband and I live on County Rd - A in the town of Stephenson (C480-2) on the map of potential corridors for the Bay Lake Project. We attended the open house at Shaffer Park on May 16, 2012. After gathering information regarding the height of the towers, width of the easements and possible health concerns regarding electric and magnetic fields we are not in favor of having county A used for the Bay Lake Project. There are four subdivisions in our area within a 1 mile area. We feel that it would be a poor choice for the corridor to run through this residential area. We would greatly appreciate having ATC consider one of the other corridor options. Thank you for your attention. Arline Rouse

My husband and I attended the open house in our area on Oct. 4, 2012. We were disappointed to learn that our property remains in one of the potential corridors for the transmission lines. We purchased our property for our retirement with intention that our children would own the property in the future. We have no intention of selling our property, but are now being told we may have to sell land to ATC. This leaves me with several questions:

- what impact would the transmission line have on the value of our property?
- would the land be worth less because of the lines? - Does ATC pay taxes on the land we have to sell to them? Are property owners reimbursed for the trees that will be cut down? I am hoping that ATC will find a route for the transmission lines that is not in our area so that we, and our neighbors will not be compelled to sell any of our land. I would like to speak to someone that can answer my questions. Thank you for your attention.

Comments:

I own segment P170-2 and also P180-2. I also believe that a better route option would be Smith Creek Road. There is a natural trout stream and several homes that it would impact if it went where you now have it shown. A good part of the yellow section is swamp land. There are more homes in the yellow section that aren't shown on the map I was issued. I think it would be a very negative environmental impact to the swamp land if this particular route is chosen along with impact on my property value.

Segment M70-2. I also own this property. I believe you should follow St. Paul road as there aren't as many homes there.

We put our life savings into the 45 acres we bought years ago, so our children would have a place to hunt. Now you want to take P390-2 away from them. We are a mile off the main road. If you come through with this power line, it's going to cause nothing but trouble. In our township they opened all roads to ATV's. So now people think they can go where every they want. they will be down the power lines lanes and onto our property with their ATV.'s. And how are we going to stop them? We and our kids are not happy about this. Please reconcider another route so we can save our land.

Hi I am one of the property owners in a proposed transmission line area, to be more specific 10789 cty X Crivitz Wi. While this is not our primary residence it is the location of our near and dear cottage which we hold close to our hearts. I guess I'm wondering why I have not been contacted at all by your company, certainly my ownership information is readily available to your company through the Marinette county tax roles. I'm disappointed that I was not contacted in regard to this matter and wish to be contacted in the future. I think your tactics are suspect and may choose to contact the Green Bay area news media. I think they would be interested in knowing that not only I have not been contacted neither have many of my neighbors and other property owners. Dean and Gail Schabach

I was wondering why the route selected would cut through the south end of my wooded property when there is plenty of open cleared surrounding land in that area. Would it not make more sence to turn the route NW across the open property prior to the intercection of St. Paul and Noquabay Rd?

Re: Ariel Photo/Corridor Routes

Dear Project Team (Ms Olsen?)

Am in receipt of recently sent ariel view. Requested duplicate of original obtained at October open house at The Woods/Town of Stephenson. (Didn't guard closely enough while in group discussion.) :(

The current view does not reflect property in joint ownership as would concern all owners.

I'm trying to contact and explain the entire situation to the other owners but would require a view as I've attempted to illustrate* (as first given to me).

I would be most grateful if you could provide view as requested. Some owners need to be contacted by phone, all need to be able to "SEE" what is projected.

I thank you for your help in getting this information to me so I can share information in detail with my fellow landowners. Thank you.

Re: Corridor Placement

PA Schwerm

W11685 Eagle Rd

Crivitz, WI 54114

Ariel View, please to include, as original photo, All 8 front lots and ALL back acreage. Showed current view (you sent) to neighbor and she doesn't understand how it would affect her. Need Full ownership & Full acreage view.

Right over my home ->
(see hand drawn map)

This acreage is balance of original acreage after individual lots deeded on Eagle Road. This land under: Gordon Nielson, ET Al. The rest of us owners are the Et Al. They do not understand the corridor affects joint retirement-investment property in addition to my individual lot.

The other owners would not care if I and my lot were thrown under the bus but they would have real concerns if they realized it would also affect their "back 80" investment acreage. (Ownerships changed, spouses have died. Those w/ kids would look out for their interests.)

Subject: the new power lines

well i hope this reaches someone that knows whats going on.....i have property at w11513 kunkel lane in crivitz wi. it looks to me that ur considering a power line down my property. i pray that this isnt the case ive owed that property for 17 years and have done several things to make it my home away from home. im a single mom that has struggled through ruff times and have done everything in my power to save this land now u guys come along and consider taking it from me? words cant express how pissed i am about this. ive heard a few stories about maybe rerouting it around me i hope this is the case. please is there anything i can do to get this changed. and if u can tell me what ur exact plans r as far as where ur going. and why cant we just use the power lines that are already there? u can email me at debscorgie@yahoo.com or call me at 920-707-5444.

this is the second comment i didnt hear back from you the first time which is the least u could do considering ur taking my property!!!! i dont know who u think u r and just tell us "hey we need ur property so we r taking it" wtf!!! ok u might not say it in those terms but thats what ur doin. i own 3 acres in the crivitz area and u want all of it.

ive worked my whole life to get that land. i bought it before i bought my first house and before i married just so i had it forever. i knew once kids come along id never b able to afford it again. now im threated to loose it all for u guys. im sure there is easyier ways to run this line....say like down the highway?? come on people use ur heads! all my neighbors are against this and i feel all u guys care about is yourself. never once have i received a phone call or a email asking for my permission to come onto my property. no u DO NOT have my permission to survey my land and tear it up.how do u sleep at night?

all this is is more greedy people wanting everthing at its best. its the northwoods now ur gonna wreck it.there is no way i could start over with a new property i am now single and dont have anybody to help me with moving everything. when i first bought that land i planted 500 white spruce trees now theyre finally a good 10-15 feet high and its perfect i have a nice brick outdoor fireplace and a nice brick pump house. none of that can b moved to another property. this is where my daughter grew up and all the great times we had there will be all torn down to greedy people!! ive never once complained about the power problems up there hey its the northwoods ur suppose to ruff it a little!!! all u rich people dont even consider us middle class that we worked for so hard to achive. u cant even b honest on whats happening u already have people out drilling for samples getting permits...but yet u say u dont know where the line is gonna go...yes u do!!! feel free to contact me by email or by phone 920-707-5444 if u want to talk and b honest with me.

I have two lots in the Crivitz area (W11513 Kunkel Lane) thats on one of your possible Routes. I dont know if you realize this but there is cabins all down Kunkel lane and across the street from me. I dont see how you could legally go down my side of the road without going over house's..state law says you can not go over a house so Im suggesting you look else where. There would be a better route to the west of me where people have big 40 acre lots or to the east of the already existing power lines. Please contact me and let me know your thoughts ASAP so I can sleep at night. This property means everything to me. Ive worked very hard to buy & keep this land.

P.S I think theres Indian bones on my property :-) J.K

Subject: Questions new transmission lines

I just received your latest notice, I would like to understand the P390-2 proposed line. This runs parallel to the existing line, why? Also when I zoom in the yellow area appears to cover 80 acers of my property.

Please provide the details as to how much of my property is could effected.

Subject: Comments Bay Lake Project 10-1-2012

ATC American Transmission Company

Comments Bay Lake Project 10-1-2012

Until receiving the information in September 2012 it was not clear that the one of the proposed routes covered 80 acres of my property.

The open house meetings have been on inconvenient days and times, making it difficult for to attend and get information. These should be on Saturday or Sunday when most people are not working and make it easier for anyone that may have to travel a long distance to be able to attend.

I personally will have to take vacation time (if I get approval) to attend an open house to attempt to obtain information.

What is clear is that it appears that ATC wants to hide the facts from the public by making it difficult for the public and especially the people directly affected by this power line to get information and have input.

I feel that the existing power line and right away should be used.

I do not want a power line right away going through my property.

It will decrease the value of my property as a whole.

It could divide the property into pieces which will make the property less desirable and decrease its value.

It will reduce the number of potential buyers and the value because of the existence of the power line.

The power line could consume 25% of each of my 40 acre parcels, and this may not be from one side but right out of the middle.

The power line may allow undesirable public access to the rest of my property. (future recreational vehicle routes, public hunting and the like)

This will decrease the appeal of the property and decrease its value.

I have spent 20 some years making this what I want for my retirement and now I find that all my work and planning is in jeopardy of being destroyed.

The power line is not as much about property and money, but about how people's lives and dreams are adversely affected.

I have planted trees to improve the environment and wild life habitat and this power line does the exact opposite.

email: tomsem1@yahoo.com

parcel numbers: 032-04674.001 and 032-04680.001

My comments on this project:

- 1) This land has been Managed Forest Land since 1972, and we plan to continue to have this land MFL for as long as we continue to own this land.
- 2) Our income from this tree farm is about \$6000 when we harvest every 10 years. How do you compensate for the future lost income on this land, which is approximately \$600/year forever. We plan to continue harvesting this planting through thinning for at least 30 more years, and then to replant.
- 3) Again, we have a property tax reduction of \$665/year on this land because it is MFL. How do you compensate for future lost property tax reduction on our land?

I do understand your methods that are used to reassess the value of land and buildings after the installation of the transmission lines, but this MFL will be significantly affected above and beyond your calculation to reduce the assessment value. Can you tell me what methods you have used in the past to compensate MFL?

please confirm whether you have received this email, thanks,

Thomas R. Sem

I strongly oppose any power lines in WI to bring power to Mich. It's not fair that thousands of WI residents should be forced to deal with the inconvenienc, loss of property values, loss of our beautiful natural views to give a business bigger profits. I see absolutley no advantage to these affected WI property owners. We have power here. If we have outages we deal with them. It's part of living with nature.

I own only 3 acres on a proposed route and any intrusion into our land or Views would have a huge detrimental effect on our property values

This is reference to my property a N6704 County P, Crivitz, Wi 54114. This house and property has been my retirement destination and project since 1997.

I find it difficult to believe that because you want to better service the U.P. I may lose the ability to use or even own it. May I suggest you skip the transmission line in Wis. and build a new power plant in the U.P.

This is notice of my objection to using the County P route for your line.

As a property owner and farmer who is located on one of the proposed routes along County A, I would like to express my concern.I attended an open house and found it very informative. I am concerned that the line would go over my houses as they are less than 150 feet from County A.Much cropland of mine and my neighbors would be destroyed with this route. A distribution line already exists on the East side of County A and I would suggest putting the transmission line on that side of the road as it will not impact any farmland which is a vanishing resource. Thank you, Michael Steer N8633 County Rd. A Crivitz Wi 54114

My husband, Michael, and I have vacation property at 7878 North Kostreva Lane, which is near the intersection of Parkway and Hwy W. We were unable to attend your informational meetings due to a conflict. However, after reviewing the mailed information, it is very difficult to discern whether new lines will be added to our area or if only the existing lines will be upgraded to more powerful lines. I would appreciate clarification. In addition, the information provided online was insufficient to make this determination.

After considering this project we are very concerned. As residents on the east side of St. Paul Rd at Crivitz, we object to the route of this power line. The possible health problems (radiation), to us is frightening.
Therefore we would vote no on the route of this powerline. The value of our property would also be less.

Have been known to cause medical problems and make medical problems worse. I suffer with migrains and seizures. I also have 2 kids that have migrains problems.

Will also lower the value of my house. We will have to sell our house due to my bone disease. Will have to move to a ranch style home with no steps. Value of homes are low enough that you are unable to get the value of what is really is. There is a a reason we have to pay country tax on our electric bill. (which i think is wrong).

This would not be a good place for the powerlines. My wife is subject to migranes and seizures and the jury is still out on the effect of health concerns from electric fields. Also the physical topography has steep hills and valleys making it more difficult and costly to run your power lines. Thank you for making us part of your decision process.

Hi,

Thank you for informing us of the scheduled open house meetings. Please let us know when the next open house is scheduled. The attached property map identifies our property within the current 3,000 foot corridor. We are concerned and would like to try and make the next round of open house to get information and input into the process.

I understand you are in the early stages of the Bay Lake Project, and the exact location of the proposed new transmission line has not been determined. How will the potential transmission lines be determined now that the open houses have been scheduled? When will the final determination of the transmission lines be decided? Once that final transmission lines has been decided, when would the project start in the Crivitz area?

Tom Tworek

We have property next to the existing 345kv Line where it crosses Cty Hwy X, running along Boat Landing 3 road in the Town of Stephenson. (Property Listed as Valerie Gruski) (Year round Cottage)

Our Major concern is if adding an additional "345" Line will increase the "EMF" output. I have a pacemaker and it is critically important that it functions without interruptions.

A120-2

there are 3 names the same except for middle name (not related)

10-20-12

At your open house recently in Green Bay I talked to a person that informed me that in section A120-2 that a Power line was going to go Along Side the existing power line that is already there. I'm hoping & praying it goes west of the existing power line. Use the Pestigo forest property for your power line, not mine

Thank you

Sincerely (signed)

Segment P170-2 This land has been undisturbed and in my family for years. I only own one little blemish in the acreage my family owns. We plan to place our retirement home on it in the future and pass the beautiful wildlife land onto our son for his future. This land is something that is a breath of fresh air to a city kid. Our family hunts and enjoys the land. Undisturbed for years. As I understand it the power lines may not be good for our health or creates some radiation. The line west of Crivitz is already constructed for the other lines that are in that area. Couldn't the new line be run parallel to it. Instead of zig zagging around. It would be less costly and more environmentally sound to construct west of Crivitz. Our property value would decrease and that would not be helpful. The Wildlife would not need to be disturbed.

RE: Bay Lake Transmission Line Project

Dear Sir or Madame:

Recently we received notification of potential corridors for transmission line construction. We own property in the Town of Dunbar in Marinette County along proposed new route U225-2 near Hwy 8. We attended the informational open house on Oconto Falls on May 15. Our numbers were 183 and 184.

We have serious concerns about the U225-2 proposal. We are owners of a large contiguous parcel along the proposed route that is held in our names, various LLCs and our private foundation. The ownership entities are Sackerson Lake LLC, Kakagi LLC, Big Torch LLC, Big Sky Construction LLC, James D & Jane P Watermolen Revocable Trust, James D & Jane P Watermolen and the James D & Jane P Watermolen Foundation, Inc. Although there are many ownership entities, it is all controlled by us. The total acreage is 952.

There are no power lines across our property at this time. The proposal causes us great concern. It cuts through our property at a diagonal for over a mile. This property has deed restrictions and a conservation easement attached which restrict development. The perimeter of our property is county land with limited access for trespassers due to no vehicular access. A one mile swath through our property for the power line corridor would create unlimited public access to our property for trespassers, snowmobilers, ATVs, bear dog runners, and walk in access. It would become impossible to keep trespassers off and would seriously devalue the property and compromise the intent of the deed restrictions and Foundation. Even though this would be only an easement corridor, we are sure you are aware that the public uses these areas as their own. Trespassers and wildlife violators would have 24 hour a day access to our private property as they

Bay Lake Formal Comments - Additional Comments by County/Municipality

would be able to access along two miles of our property (one mile on each side of the corridor). We could not possibly ever patrol these boundaries to prevent intrusion. We have the exclusive use of property as is our right as property owners.

We understand the need for upgrading your lines but it would be more logical to use already existing corridors such as east of Dunbar and along HWY 141 and upgrade to larger towers as your literature suggests for efficiency. Again, our property would be permanently adversely affected. We would not be supportive of new swaths through our land and significant portions of county lands that would promote new abuses of resources and wildlife.

Thank you for your consideration of our position in this matter.

Sincerely,

James D. Watermolen

American Transmission Co
PO Box 6113
DePere, WI 54115-6113

Dear David:

It was a pleasure meeting you at the October 4 informational meeting in Crivitz regarding the potential corridors for transmission lines.

We have serious concerns about the U255-2 proposal. We are owners of a large contiguous parcel along the proposed route that is held in our names, various LLC's and our private foundation. The ownership entities are Sackerson Lake LLC, Kakagi LLC, Big Torch LLC, Big Sky Construction LLC, James D & Jane P Watermolen Revocable Trust, James D & Jane P Watermolen and the James D & Jane P Watermolen Foundation, Inc. Although there are many ownership entities, it is all controlled by us. The total acreage is 952. We also have spoken with the Coleman Lake Club properties manager, Brad Corson, and have similar concerns.

There are no power lines across our poperty at this time. The proposal causes us great concern. It cuts though our property at a diagonal for over a mile. This property has deed restrictions and a conservation easement attached which restrict development. The perimeter of our property is county land with limited access for trespassers due to no vehicular access. A one mile swath through our property for the power line corridor would create unlimited public access to our property for trespassers, snowmobilers, ATV's, bear dog runners, and walk in access. It would become impossible to keep trespassers off and would seriously devalue the property and compromise the intent of the deed restrictions and Foundation. Even though this would be only an easement corridor, we are sure you are aware that the public uses these areas as their own. Trespassers and wildlife violators would have 24 hour a day access to our private property as they would be able to access along two miles of our property (one mile on each side of the corridor). We could not possibly ever patrol these boundaries to prevent intrusion. We have the exclusive use of property as is our right as property owners.

In addition, we have environmental concerns. Our property, along with the 9000 owned by the Coleman Lake Club and the Dunbar State Natural Area, comprise a vital resource area. There are several spring fed creeks that feed into KC Creek and the Pike River. We feel the U255-2 corridor could adversely affect this wild river resource.

We understand the need for upgrading your lines but it would be more logical to use already existing corridors such as east of Dunbar and along HWY 141 and upgrade to larger towers as your literature suggests for efficiency. Truck access and maintenance issues are much simpler and less costly along existing routes, Again, our property would be permanently adversely affected. We would not be supportive of new swaths through our land and significant portions of county lands that would promote new abuses of resources and wildlife.

Thank you for your consideration of our position in this matter.

Sincerely,

Subject: Bay Lake Project concerns

Hello my name is Andy Weinhart and I'm a local citizen from the small town of Crivitz. I am located at N8275 CTY A and my family and I own a small beef farm that has been in our family since the 1800's. If you decide to put this project through our proposed area it will almost take our home away and a chunk of tillable land for our farm. I was wondering if you have considered going through the Nicolet National forest where there are no homes or farm land??? I know the natural gas lines run through there already but in my opinion that would be a better route for these lines for the simple fact that there is no residents for a lot of miles and there already is a existing road where making it bigger would be a lot easier??? Please feel free to e-mail me back. I would like to know some more information on this project.

Thank you
Andy Weinhart

Your proposed route along Cty Rd A would devastate our farm! That field that you would use for lines is our best field on the farm! Also that power line would be awful to look at every morning we go outside.

You have a much better route along Hwy. 141 that already has power lines there.

We have a power line already going thru our farm, but it is out of site most of the time.

Please do not use the route along Cty Rd A and ruin our farm!

Sincerely,

Ronald Weinhart

I am opposed to Project #C397-2. The power lines should run in Project #95-2. County Rd. "P" has a lot of homes and farms with irrigation lines.

The towers and lines will make part of my land unuseable, but I will still have to pay taxes on the land.

This line will also reduce the value of my property.

I think the line should be run in your rightaway #95-2.

I BELIEVE THE TRANSMISSION LINE C397-2 SHOULD BE MOVED WEST TO TRANSMISSION LINE A95-2. THIS LINE RUNS IN A WOODED AREA, C397-2 RUNS IN AN AREA WITH HOMES AND A FARM WITH AN IRRIGATION SYSTEM. MY HOME WOULD BE IN AN AREA OF HIGH MAGNETIC FIELD AND A LESSER SALE VALUE AND A REDUCED VALUE. THE TRANSMISSION LINE SHOULD BE KEPT TO THE WEST A95-2 TO A125-2 THIS AREA IS ALREADY ATC LAND THAT RUNS THRU THE WOODS, AWAY FROM HOMES.

Our 80 acre's was purchased as hunting land by myself & my 3 son's, it is a family gathering place. We hunt all wild game on it & have built a very nice home. Our grandchildren will inherit & hopefully use it as we have.
Having a power line & the swat of land it will take is not part of our dream. We are very much against your planned power line eye sore.

Sincerely,
Dan Willems 5/19/2012

As stated earlier, this land was bought mostly for hunting & recreation. My 3 sons & I want to pass it on to the grand kids as is, not with high power line splitting it up. It will effect hunting in the future!

I certainly do not think it will increase the value of the land, if anything it will lessen it.

We remain oppossed!

I attended the meeting in Crivitz to find out how the proposed line would affect us. We own a parcel on Hwy W that is 3.3 acres. If the line goes through this property you would need 150 feet which would leave the value worthless. There wouldn't be enough land left to use for future development. We are totally against the line going through this area.

DEAR SIRS: WE STRONGLY OBJECT TO THE CREATION OF ROUTE O152-2/P380-2 AND THE WIDENING OF A120-2/A125-2.

WE OWN 2 ADJACENT 20 ACRE PARCELS IN SEC. 7, TWN OF STEPHENSON, MARINETTE CO. BOTH PARCELS ARE IN THE MANAGED FOREST LAW PROGRAM. WE HAVE HAD MANAGEMENT PLANS IN PLACE FOR DECADES. ALL PROVISIONS IN THE PLANS HAVE BEEN RESPONSIBLY AND DUTIFULLY CARRIED OUT.

IF 150-2/P380-2 GOES THROUGH, OUR 2 PARCELS WILL BE BORDERED ON 3 SIDES BY HIGH LINES. O150-2 WOULD EVEN CUT DIAGONALLY THROUGH 2 40 ACRE PARCELS (DOHERTY & CISZEWSKI/CLIFFORD). IF A120-2/A125-2 IS WIDENED, IT MAY VERY WELL GOBBLE UP OUR 20 ACRE PLOT WITH CABIN. PLEASE USE P390-2 AS YOUR NEW ROUTE. WE WHO HAVE HAD TO PUT UP WITH THESE LINES DESERVE A BREAK. THESE LINES ARE A CURSE ON THE LAND (E.M.F., UGLY). USE P390-2 AS YOUR ROUTE.

SINCERELY,

Subject: power line proposal

to whom it may concern:

I live at N11248 Kahles Lane in Athelstane, WI. I have a 150 ft easement going through my property with the power lines, and am on one of the proposed routes for the new lines. I very much object to any additional lines put on my property!!!!

1. The health risks are a huge concern for me. Studies have been done about the many dangers of power lines. One set of lines is comfortable, but two sets is increasing the risk for cancer.
2. My husband and I have a home we built, and we had planned on building another on the back of our property when we retired, so our existing one could be for our son and his family. The new lines would not allow this to happen.
3. We bought this land as investment land. The price of land has more than quadrupled since we bought it in 1995, and if you widen the lines, you will have over half of our land tied up in power lines, making it USELESS.

A neighbor, who comes up here on the weekend, just informed me that the lines aren't being added to the east, as we thought, but to the west by 2000 ft. This makes absolutely NO sense, as this now means many homes, including ours, will be GONE!!!!

It's bad enough if you take half of our land for the lines, but if you go to the west you will take our home and we will have NO place to go. You should be ashamed of yourself.

I expect some sort of reply from someone who knows what is going on!

Tracie Wood

We do not want the power line to run on this side of Co. Rd. A because we have two concerns.

No. 1 - We planted pine trees in 1980 as a noise and pollution barrier from Co. Rd. A. They are now about 20 ft. high and would have to be cut down.

No. 2 - Smith Creek runs along Co. Rd. A on our property and it is also a swampland in the area around the creek.

We own 20 acres in one of the proposed locations for the Bay Lake Project transmission line....between Deer Lake Rd and Halleluia Trail in the town of Stephenson. In the past 20 yrs since we bought & built on the property, we have lost most of our Oak trees to "Oak Wilt" and several acres of our woods were burned in a forest fire. Please do not further with this process as a transmission line was installed in the late 60's on some property we owned on Boat Landing 3 rd. The swath cut across our land was used by snowmobilers and as a result, our cottage was frequently broken into. We bought the 20 acres we presently own with the hope of enjoying the seclusion and beauty of the North Woods in our retirement. Please allow us to keep what's left of our haven for our family to enjoy in the future. Thank you for listening.

Land was purchased several years ago - pristine land with fields, forest, trout stream, ponds and wonderful wild life - and minimal obstruction from electrical poles on the horizon.

Now ATC proposes a transmission line that would/could destroy/alter all of the above.

Our house is within 150 feet of section line, radio & television interference. Unknown affets on health, - not only from whatis known but also what will be discovered in years to come. Nobody commented!

Is wildlife going to avoid EMF? what happens to turkeys, ducks, geese, deer, cougars (yes! siting by two people) if line is constructed. No one

Where will the view be? Huge "StarWars" structures on the land. manmade - not by mother nature.

Seg. U60-1 -

Hwy 41 segment appears to exhibit several good points. but I do have some concern for the type of structure used to support a line and the safety of not hitting it with autos.

Are future needs being anticipated in the current planning?

The cost of this planning must be high - in the final bill the customer pays. What is being done to reduce this cost?

Regarding my property: W8595 County C, Wausaukee, WI.

I am unable to attend May 16th meeting because my minor son is still in school and we live 520 miles away. I would like someone to contact me to let me know if my property weill be affected and if so, how will it be affected. I have called the toll free number but no one has returned my calls yet.

I really do not want powerlines running through my property.

Comments:

I was unable to attend meeting and have many questions. Were minutes taken at the meeting, and if so may I get a copy?

I definately do not want this running through my property located at W8595 County C, Wausaukee WI. I'm concerned with health issues, lowered property value, and disturbance of wildlife and forrestry.

There are 2 proposed routes through my property. Which will be used? How are you compensating landowners? When will decisions be made ? When will someone personally contact me?

Bay Lake Project Comments:

My property, at W8595 County C Road, Wausaukee, WI 54177, is located on preliminary route C520-2. I am opposed to this for the following reasons:

A power poll in the front yard of my property would look hideous and lower my property's value.

It would use up the flat cleared area of my yard which I use for crops.

It could possibly hamper logging trucks access to the back part of my property.

A one time compensation to "use" my land doesn't cover all future costs (including property taxes.

It would force me to allow strangers on my property to maintain power polls.

The irritating hum that power lines produce (especially after a rain) will be a detriment to the peaceful sounds of nature.

Sincerely,

(signed)

I am writing on the section labeled P-190-2. I oppose the line thru my property for five reasons.

- 1) My view to the West, the powerline would negate a major reason why I built where we did 12 years ago - to see beautiful sunsets
 - 2) Future home sites for any or all of our four children
 - 3) land value
 - 4) farmability (lost acreage)
 - 5) The neighbors honeybee's, these bee's pollinate a very large area. Would the line have an adverse affect on the bee's? (magnetic fields) (constant buzzing)

To Whom It May Concern,

I have objections to the proposed location of A.C.T.'s 345 K v line in segment P390-2 on several levels. The most important to me is the impact the line will have on my family.

In 1950, my parents bought land and built a cottage one mile west of your current site. It was here that my brothers, sister and I spent all summer and most weekends enjoying everything the north woods had to offer. The time we spent here was marvelous!

Time passed and as we married and had children of our own, we outgrew the old cottage and, with plans for the furture, built year round homes on forty acre parcels that we split between us with the hope that our children could enjoy the same comradery and security of family that our parents provided for us. Palmers, Erdmanns, Zehrns and Mangless are all related. Our children and now grandchildren can walk through the woods to visit aunts, uncles, grandparents and cousins, participating in a multitude of family events such proximity provides.

All of us will be directly affected by this line with our greatest concern centered on the possible health effects on the grandchildren, aged seven and under, on of whom has had a bone marrow transplant within the last year. This child was infected by a systemic rheumatoid virus that entered her body tagged onto an ordinary cold virus when she was nine months of age, affecting her joints, lungs, heart and liver. On life support, she received last rights and now, mere months after being released from the hospital, she can run, jump and play like any four year old. She still requires weekly monitoring and remains in modified isolation at the cottage with nearby family assisting her parents with childcare, shopping, cleaning, schooling and home modifications her status necessitates. If this line advances on this proposed site, they will be forced to leave as the child's radiation exposure has been maxed out. She can tolerate no more exposure, even low level without being affected.

My adult children are also concerned about the possible health implications on their youngsters and after reading several studies, have informed me that visits up north will be curtailed after the line goes through. Three generations of our family are thus affected. The extended family environment we have created over the last thirty-eight years will be destroyed And what of Mira, when returning the population density of the city increases her exposure to bacteria and viruses her immune system is still unable to handle?

Please consider relocating this line to you existing corridor one mile west and leave our family intact.

Madison, Wi. 53791-8614

To Whom It May Concern:

Several weeks ago, I sent a letter detailing the affect that the Area 2 Bay Lake Project would have on my extended family. This note concerns the project's financial impact.

My husband was a planner, a professional man with an unfortunate family history of sudden death. Aware of this possibility, he invested in land "up north" where we could enjoy the beauty of our surroundings, the comfort of extended family and the security that investment in land would provide. He first purchased a year round home which he expanded and remodeled to accommodate his children, plus their future spouses and children. He built three, forty-five foot garages used for parking, a workshop, a backup generator, fishing boat, canoes, paddle boat, pontoon, and other "toys" his four grandchildren now enjoy.

Believing land was always a good investment, he bought four other parcels that he put into trusts for his family's future and then at sixty-one died suddenly of a massive brain stem infarct. Now you are putting through this transmission line that threatens to undo all that he has created. The five foot high windows in the family room now overlooking pines and maples will instead view cleared areas decorated by steel structures. Our children will be visiting less often fearing the lines possible health impact on their youngsters. No one will build on our lot across the street nor on our twenty-four acres next to my brother which are due to be directly under your lines. The eighty acres owned on Nejedlo with its building sites on the edge of a meadow overlooking steep ravines are on your "inactive list for now" but will see no future investment due to this listing.

Our family is experiencing shock and disbelief! All of the investments made by my husband for his family's financial future are now having their use restricted and dollar value slashed by this project. no matter how you view this, the impact on our family is immense! All of us wish you determine an alternate route to be preferable.

Sincerely,
(signed)
Ms. Ray Palmer

Madison, Wi. 53791-8614

To Whom It May Concern:

I have written two prior letters to your company explaining the impact the proposed route for the Area 2 Bay Lake Project would have on my family's life plus its financial impact, with all five land parcels my husband and I purchased for our children and grandchildren being affected.

The third concern I have is for my family's well being. I have read articles discussing the possible impact these lines may have on the health of individuals living close by and while health affects have not been "proven", the possibility for serious impact exists. I am a cancer survivor. Given only a one in five chance of living five years, I have beaten the odds without recurrence. This does not mean that I would be comfortable with the lines passing by my home, wondering every time I looked out my windows if their subtle influences were affecting my life span!

An even greater concern is for my children and grandchildren. My daughter has an auto immune inflammatory disorder that affects her joints, heart and lungs when ever she has a flair but still works as a trauma nurse, attends school, is active in her church, and home schools her children. She and her husband Paul planned to retire at our cottage but after speaking with individuals with the same disorder who experienced inflammatory flares after working near similar lines, retirement at the cottage will not happen if this line goes through.

My daughter's more immediate concern is for her young sons, both adopted from China with cleft lips and palates. The oldest boy had a severe double cleft and as a result had super infections of his ears and sinuses that went untreated in China. Shortly after bringing him to the U.S., he began bruising easily and was diagnosed with D.I.C. The infections had triggered an auto immune response where his body destroyed all of his platelets and his blood could no longer clot. Admitted to Children's Hospital, he was aggressively treated and closely monitored after discharge for recurrence is possible and carries a fifty percent mortality rate.

Since then, the child has had multiple surgeries on his mouth and palate. He is very stoic and never complains but when he has had enough of the procedures from the maxillary surgeon, facial specialists, audiologists, orthodontist and speech therapist, he asks to go to the cottage to heal. Here he can be just a kid, play with his cousins, ride his mini bike on the woodland trails, watch the bears with aunt Sally, go fishing with uncle Larry, and obtain his favorite treats from aunt Sue's candy jar.

Our cabin is his retreat, built by his grandpa who died three days before little Ray was born in China and whose life insurance made his adoption possible. Affectionately called "The Lodge" because my husband built it to shelter not only our immediate family but our children's future spouses and the grandchildren he hoped would follow. Now, with four grandsons aged seven and under, the place is filled with laughter and antics when we are all together, but the proposed power lines are a concern. Could they trigger a recurrence of Ray's D.I.C.? Could they impact the health of the other boys, aged three to five years old, the most vulnerable age for exposure to the lines

Bay Lake Formal Comments - Additional Comments by County/Municipality

emissions? My son and his wife say their visits will be shorter and less frequent should this project go through. My daughter and her husband are not willing to risk exposing Ray and little Ty, much less risk an exacerbation of her inflammatory process.

Then there is me. Would I stay here alone with nothing more than memories of what fun we once had, with only the hum of the power lines to break the silence? This is all too depressing to contemplate. Please use an alternate site, preferably one where lines already exist to avoid upsetting the lives of so many.

Sincerely,

(signed)
Mrs. Ray Palmer

SEE ENCLOSED LETTER ON BAY LAKE PROJECT FROM DANIEL J REEDY

October 16, 2012

Dear Sirs:

My brother Terrance and I own property that is on a possible preliminary route in project area two of the Bay Lake Project. I own the house and 3.9 acres of land that is at W8847 County Road C about five miles west of Wausaukee.

My brother and I jointly own the adjacent 56 acres. Our property is on the south side of County C just east of Big O's Tavern, which is at the intersection of County C and County V in Marinette County.

Our family has owned this land since 1919 when my grandparents moved to the area and started farming. Naturally my brother and I both have strong feelings for the property and the area.

After giving the Bay Lake Project a good deal of thought, I would be very opposed to the power line coming across our property or coming down the County C corridor for a number of reasons.

My objection is based on very practical concerns:

1. There is often a negative impact on land values due to the public perception of possible health hazards associated with high power lines.
2. There would be a disruption of the exceptionally pristine views that I enjoy from my home.
3. There could be possible interference with television and radio signals.
4. There would be a negative impact high power lines would have on future land use options.
5. There could be a negative impact timber resource management options.

I also object to the project in our area because of the negative impact it would have on the aesthetics of the area and because of the very personal way I envision the area.

I have been investing in improvements in my home with the intention of retiring there in about three years but a high power line on our property or in close proximity to our property would force me to change plans.

I sincerely hope you will take my opposition into consideration and will find another route for the line rather than crossing our property or coming out County C.

I live in Florida and my brother lives in California so it is impossible for us to attend any of the public meetings to voice our concerns and opposition to using our lands or placing the line in our neighborhood.

Respectfully,

(signed)

My brother DANIEL REEDY and I own 60 acres in the Town of Wausaukee Marinette County south of Hwy C & east of County V. The property has been our family 100 years and means a great deal to us. Putting a high voltage powerline on or near our property would destroy both the aesthetics and economic value of this property. We are next to Big O Tavern & Restaurant. We urge you to locate the powerline farther west away from homes and private property where there is more County forest land.

Comments Regarding Proposed P400-2 Routing. 06-04-12

With this document, we wish to state our comments regarding the proposed routing of P400-2, specifically in the area up to 2 miles north of Moonshine Hill Rd and axially centered around Camp 5 Rd.

Property Surface Area Impact: We currently own three (3) 40's or- 120 acres in which the proposed line routing will impact- 1/3 or 40 acres of our property. This is not just a simple longitudinal traverse but a latitudinal slice of the entire property.

Property Devaluation: Dependent on placement of the line, this could potentially render our property useless for any form of inhabitation and seriously devalue the property. Our intention in purchasing the property was to use it for forest product production purposes and maintaining 1/3 of area as an open field was not part of our management strategy. If the line is approved through our property, it can be purchased, not leased.

Landowner Liability: With regards to litigious liability, the extension of a lease agreement still maintains ownership of the corridor to the current landowner and with this opens up a potential for lawsuits for personal injuries that will occur as the corridor is traveled by illegal OHV traffic. Efforts to halt trespass will incur additional expenses and effort with regard to purchasing, erecting, policing, and maintaining a fenced area.

ESA Impacts: The 30 acres of the north 40 are part of an extensive cedar swamp with a spring fed creek flowing through it. Additionally, 5 acres of cedar swamp on the south 40 exists. These areas are active reptilian and amphibian breeding grounds, deer yarding areas, and hold grouse year round. The application of herbicides to control vegetation in these areas would clearly impact the surface and potentially well water supplies in the area.

Population Density: Camp 5 road follows the area section line and has cottages and permanent homes on both sides of the road and the western portion of the

Bay Lake Formal Comments - Additional Comments by County/Municipality

route covers a subdivision of permanent residential homes. Routing of the lines through this section will force relocation of families and razing of resident and commercial buildings. Again by virtue of this route, most of the infrastructure and property holdings are vertically in line with the proposed route due to the road running on and parallel to the section line.

Recommendation: Further it is recommended to route this up an already existing utility easement corridor such as the "pipeline " property or a main highway right of way. This will offer the path of least resistance and have minimal impact to people living in the path of this project.

Thank you for your serious consideration to our request to remove this route off the list of potential corridors.

Michael G and Susan M Tesar

I think the power line would lower my property value. The whole property not just what you use. I'd rather not have a cancer causing, noise making, eyesore near my property. Just saying. Please choose an alternate route. Up by the highway 141 if you really have your heart set on this area.

Not by the railroad

Thanks for listening.

Marilyn Andrew

Proposed Routes

X Bryan Creek O40-3; O50-3; O60-3

I am very concerned that the building, operation and maintenance of a high-voltage power line will affect very negatively the flora, fauna, and natural features of the Michigan North Woods Club which have been carefully protected and preserved for 86 years by our members. The headwaters of Bryan Creek are on MNWC property, and these are very pure waters which lead into the Escanaba River and help to provide for a healthy trout population in those waters. I refer here especially to Corridor 040-3; O50-3; 060-3.

I am also concerned that the Michigan DNR Private Landowner Incentive Program that the Michigan North Woods Club became involved with in 2011 could be negatively impacted by a high voltage power line in the area. More than 600 species of plants and animals are listed as threatened, endangered or of special concern in Michigan, in large part because of habitat loss. The primary goal of the Landowner Incentive Program is to help private landowners create and manage habitat for species that are rare and/or declining. We hope to extend this program into other areas of MNWC property.

I am also concerned about the nesting eagles that are on MNWC property and the fact that the Bald and Golden Eagle Protection Act prohibits activities that disturb nesting sites.

Endangered or threatened animals that may reside in or travel through the MNWC include the Canadian lynx (threatened), Kirtland's Warbler (endangered), and cougar (endangered). Cougars have been sighted in Marquette County as recently as July 2012.

Subject: Comments on Bay Lake Project

Please find attached my comments on the ATC power line Bay Lake Project regarding Corridor P40-3; C30-3.

Marilyn Andrew

PROPOSED ROUTES

X Dewey P40-3; C30-3

I am very concerned that operation and maintenance of a high-voltage power line will fragment both plant and animal habitats, thus reducing mobility for some species and threatening their existence. Such power lines create more interruption in the forest edge providing significantly increased opportunity for invasive species. A high voltage power line would also provide much greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs etc. threatening both animal and plant life.

I am also concerned about protecting the bald eagles that have been observed at the Michigan North Woods Club. The Bald and Golden Eagle Protection Act prohibits activities that disturb nesting sites, and eagles are known to nest throughout the MNWC. The Endangered Species Act identifies the following animals, which may reside in or travel through the Michigan North Woods Club; Canadian Lynx, Kirtland's Warbler, and Cougar. There have been several sightings of cougars in Marquette County in 2012.

I am also concerned about the wetlands that would be impacted by a high voltage power line. There are a number of wetland areas in the corridor to which I refer. Construction, operation and maintenance of such a line could degrade streams and stream crossings with an abundance of silt and other matter.

I strongly object to the ATC Transmission Line on the above corridor. We have lived at the above address for almost 20 years and have worked very hard to protect the environment for the wild life that live in our area. Bald eagles, wetlands, and various other threatened and endangered species would be harmed by these Transmission lines. I am also very concerned about our property value, and the peaceful surroundings that we enjoy so much.

We are very concerned about the possibility of a high powered electrical transmission line coming within 150 feet of our log home. We have wetlands and a number of threatened and endangered species that live on or near our property that would be effected by this power line. There also would be 100's of homes effected along County Road 581.

Subject: Bay Lake Project Corridor - Route

Greetings,

My name is Sheri Bunyan. I own a parcel of land within the Bay Lake project region and am wondering if you can tell me if you intend to put electric or gas transmission lines along this property line or through this parcel. I was unable to attend the informational meeting in my area, but was told by other residents that the routes have not yet been firmly established.

My property is located in Ely Township in Michigan. The property address is:
58300 County Road 581
Ishpeming, MI

This land and the mineral rights were granted to my great-grandfather by President Woodrow Wilson. It has tremendous value to me, both in sentiment and in value of land and mineral rights. I am sure that you can understand my concern for losing significant portions of this land to the project and future use of easements.

I do understand the need to maintain and improve our power delivery infrastructure, and am sure that you have encountered many citizens who have a "not in my back yard" mentality. It is not my intent to be difficult, but to seek the best way to represent my interests. Would you please tell me if there is any process by which I can formally request that specific portions of my family's land are used minimally or not at all?

Best regards,
Sheri Bunyan

Bryan Creek Corridor: O40-3, O50-3, O60-3

I believe that the area in question is and has been preserved for the wildlife of this area. It is their sanctuary undisturbed by the Michigan North Woods Club, yet maintained for the best possible growth, all the while working closely with the DNR. There have been many spottings of the bald eagle, & moose in this area. Please do not destroy their homes!

To go through this property would do more harm to the homes of many bald Eagle who nest and reproduce very closely to the sight for which you plan to disrupt. We have also sighted a cougar in the very area that you want to cross. This sighting has now been 3 years ago, but I suspect that this is its territory now.

The Dewey Lake area hosts populations of sand hill cranes, blue herons, loons, beavers, moose eagles, variety of turtles as well as a wide variety of plants. Infringement on wetlands & lakes are unavoidable in the proposed pathway. These wetlands act as a valuable habitat & the combination of forested landscape & wetland act as a combination - regulating streamwater clean & quality. The watershed at Dewey Lake & swamp creeks the head-waters for Camp Eleven Creek which flows to the Escanaba River. Changes here are particularly meaningful - effecting the integrity of everything downstream. There will be no such thing as an ecologically -sound herbicide in this context & heavy earth-impressing machines will also be detrimental to this system & downstream.

Bryan Creek Corridor: O40-3, O50-3, O60-3

see attached~

This area hosts populations sand hill cranes, blue herons, loons beaver moose eagles variety of turtles as well as a wide variety of plant communities. The easternmost pathway potentially infringes on three watersheds, all of which have their headwaters within the protection of the Club's property lines. The first watershed, one that includes Big Drake, Little Drake, Spear, Erickson and Crescent Lake, is the headwater for Bryan Creek. The second watershed includes Trout Lake, and is the source for Clear Creek. The third watershed includes Little Bass, Big Bass and Bass Lake Creek. Clear Creek and Bass Lake join Bryan Creek (Bass Lake Creek doing so well south of MNWC property), and this larger version of Bryan Creek ultimately flows into the Escanaba. Changes to headwater systems are particularly meaningful - they affect the integrity of everything downstream. Changes to headwater systems are particularly meaningful - they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

Courtney Damkroger - Member of MI Northwoods Club - 65400 County Road 581, Marquette, MI-Ely township

Comments:

Installation of the proposed Bay Lake Project, 345 high-voltage power lines will significantly threaten the biological and ecological resources of the Michigan North Woods Club in numerous ways. The MNWC is an 86-year-old nonprofit conservation association devoted to the care and protection of our 9,000 acre preserve. For nearly a century our members have worked to protect the landscape that is home to myriad species, several of which we believe to be endangered, threatened, rare and unique. Among my concerns are the:

- the existence of Bald Eagles, subject to the Bald and Golden Eagle Protection Act, who are known to nest within the property.

-the existence of rare and/or declining tree species. In 2011 the MNWC contracted with the Michigan Department of Natural Resources (DNR) Private Landowner Incentive Program to create and manage habitat for such species in the Green Hills area. We believe other areas of the property also qualify for the program.

-negative impacts to wetlands (Michigan Wetlands Protection Act)that are abundant throughout the MNWC property and particularly in this area.

-degradation of habitat welcoming to endangered species (Endangered Species Act) such as the Kirtland's Warbler, Cougar & possibly Canadian Lynx. Cougars, for example, were last sighted in Marquette County in July 2012 (Cougar sighting reported in U.P.'s Marquette County, July 18, 2012, Tom Greenwood, The Detroit News).

-negative adverse impacts to cultural resources. The MNWC is a conservation nonprofit that has operated and overseen its property in a relatively consistent manner for all of its 86 years. The buildings, pathways, road networks, patterns of use and history may render it eligible for the

Bay Lake Formal Comments - Additional Comments by County/Municipality

National Register of Historic Places as a cultural landscape. While no evaluation has been conducted to determine eligibility yet, it appears that both the National Historic Preservation Act and the National Environmental Policy Act may apply.

In addition to the above the construction, operation and maintenance of the high-voltage power lines will:

- degrade streams & stream crossings with an abundance of silt & matter
 - fragment both plant and animal habitats thereby reducing mobility for some species and threatening their existence
 - fragment habitat which can also create a human commensal condition whereby animals that are comfortable with humans but threatening to other animals drive out threatened, endangered or species of concern
 - create more interruption in the forest edge providing significantly increased opportunity for invasive species
 - provide a much greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs and the like threatening both animal and plant life
-

Bryan Creek Corridor: O40-3 O60-3

1. This area hosts populations sand hill cranes, blue herons, loons beavers moose eagles variety of turtles as well as a wide variety of plant communities. The easternmost pathway potentially infringes on three watersheds, all of which have their headwaters within the protection of the Blub's property lines. The first watershed, one that includes Big Drake, Little Drake, Spear, Erickson and Crescent Lake, is the headwater for Bryan Creek. The second watershed includes Trout Lake, and is the source for Clear Creek. The third watershed includes Little Bass, Big Bass and Bass lake Creek. Clear Creek and Bass Lake join Bryan Creek (Bass lake Creek doing so well south of MNWC property), and this larger version of Bryan Creek ultimately flows into the Escanaba. Changes to headwater systems are particularly meaningful - they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

2. We are very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to maintain the easement area of the transmission line.

3. We believe that the power line and associated implementation activities will likely threaten eagle-nesting sites, of which we have several.

4. MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property ((>9,000 contiguous acres, with small embedded roads). Whole watersheds are included in the property, and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. The Erickson pathway effectively dissects (cuts in two) the area protected by the club, and will do so at scale much more profound than does the Bryan Creek Road. It will break a large protected space into two smaller fragments. As a result an increasing fraction of the MNWC will be abutting perpetually degraded habitats. Further some species will doubtlessly be unwilling to move through that degraded habitat.

5. We believe the impacts from traffic necessary to operate and maintain the transmission lines will be detrimental to the wildlife habitat we have worked to protect.

6. We believe that the EMFs (electromagnetic field) impacts would be detrimental to wildlife and fish

7. We believe that our Jack Pine areas, which provide ideal Kirtland's Warblers' (an endangered species) habitat, will be disturbed by the transmission lines.

8. We believe that the route in the eastern part of the MNWC (code numbers O40-3, O50-3, O60-3) will conflict with our agreement with and commitment to the Michigan DNR's Private landowner Incentive Program (a state conservation program that partners with local owners to reintroduce native tree species throughout the state) in the Green Hills. The other route (P40-3 and C30-3) would likely interfere with any future participation in this program.

9. The Erickson pathway also infringes on the Green Hills, an area that includes large stands of mature hemlock (unusual for the Upper Peninsula).

10. We currently have all 37 miles of our perimeter fenced in order to protect the natural areas we

Bay Lake Formal Comments - Additional Comments by County/Municipality

have worked diligently to preserve. We believe opening the area for the transmission lines will provide additional access that could be detrimental to our 86-year effort. (It has been my/our experience as a part-time resident of the Upper Peninsula and a Family Member of the Michigan North Woods Club for more than 61 years, that individuals commonly use utility easements as avenues for travel on recreational vehicles.)

11. Bald and Golden Eagle Protection Act-prohibits activities that disturb (active and inactive)nesting sites. Eagles are known to nest throughout the MNWC.

12. Endangered Species Act-among the animals identified by the ESA are the following, which may reside in or travel through the MNWC: Canadian Lynx-threatened.

-Kirtland's Warbler-endangered.

-Cougar--endangered and last sighted in Marquette County July 2012

13. Michigan DNR Private Landowner Incentive Program- More than 600 species of plants and animals are listed as threatened, endangered or special concern in Michigan, in large part because of habitat loss. Most of these rare and declining species occur on private land. The primary goal of the Landowner Incentive Program is to help private landowners create and manage habitat for species that are rare and/or declining. In 2011 the MNWC and the Michigan DNR entered into a contract to establish an Incentive Program at the MNWC in the Green Hills area, which would be impacted by the Bryan Creek Corridor (O40-3; O50-3; O60-3) proposal. We believe other areas of the property qualify for the program.

14. Michigan Wetlands protection Act-- the law requires that persons planning to conduct certain activities in regulated wetlands apply for and receive a permit from the state before beginning the activity. Permits are required for activities including construction, operation and maintenance of any use or development in a wetland.

In addition to the laws cited above the construction, operation and maintenance of the high-voltage power lines will:

- degrade streams and stream crossings with an abundance of silt and other matter -fragment both plant and animal habitats thereby reducing mobility for some species and threatening their existence

- fragment habitat which can also create a human commensal condition whereby animals that are comfortable with humans but threatening to other animals (crows that take over the nests of more fragile bird species for example) drive out threatened, endangered or species of concern

- create more interruption in the forest edge providing significantly increased opportunity for invasive species

- provide a much greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs and the like threatening both animal and plant life

As a member of Wisconsin's Green Tier program, ATC pledges its commitment to environmental sustainability. We believe that the impacts to the Michigan North Wood Club from the proposed transmission lines (O40-3, O50-3, O60-3 and P40-3, C30-3) would result in impacts so profound to our environment and wildlife that they contravene ATC's commitment.

9. The Erickson pathway also infringes on the Green Hills, an area that includes large stands of mature hemlock (unusual for the Upper Peninsula).
10. We currently have all 37 miles of our perimeter fenced in order to protect the natural areas we

Bay Lake Formal Comments - Additional Comments by County/Municipality

have worked diligently to preserve. We believe opening the area for the transmission lines will provide additional access that could be detrimental to our 86-year effort. (It has been my/our experience as a part-time resident of the Upper Peninsula and a Family Member of the Michigan North Woods Club for more than 61 years, that individuals commonly use utility easements as avenues for travel on recreational vehicles.)

11. Bald and Golden Eagle Protection Act-prohibits activities that disturb (active and inactive)nesting sites. Eagles are known to nest throughout the MNWC.

12. Endangered Species Act-among the animals identified by the ESA are the following, which may reside in or travel through the MNWC: Canadian Lynx-threatened.

-Kirtland's Warbler-endangered.

-Cougar--endangered and last sighted in Marquette County July 2012

13. Michigan DNR Private Landowner Incentive Program- More than 600 species of plants and animals are listed as threatened, endangered or special concern in Michigan, in large part because of habitat loss. Most of these rare and declining species occur on private land. The primary goal of the Landowner Incentive Program is to help private landowners create and manage habitat for species that are rare and/or declining. In 2011 the MNWC and the Michigan DNR entered into a contract to establish an Incentive Program at the MNWC in the Green Hills area, which would be impacted by the Bryan Creek Corridor (O40-3; O50-3; O60-3) proposal. We believe other areas of the property qualify for the program.

14. Michigan Wetlands protection Act-- the law requires that persons planning to conduct certain activities in regulated wetlands apply for and receive a permit from the state before beginning the activity. Permits are required for activities including construction, operation and maintenance of any use or development in a wetland.

In addition to the laws cited above the construction, operation and maintenance of the high-voltage power lines will:

- degrade streams and stream crossings with an abundance of silt and other matter -fragment both plant and animal habitats thereby reducing mobility for some species and threatening their existence

- fragment habitat which can also create a human commensal condition whereby animals that are comfortable with humans but threatening to other animals (crows that take over the nests of more fragile bird species for example) drive out threatened, endangered or species of concern

- create more interruption in the forest edge providing significantly increased opportunity for invasive species

- provide a much greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs and the like threatening both animal and plant life

As a member of Wisconsin's Green Tier program, ATC pledges its commitment to environmental sustainability. We believe that the impacts to the Michigan North Wood Club from the proposed transmission lines (O40-3, O50-3, O60-3 and P40-3, C30-3) would result in impacts so profound to our environment and wildlife that they contravene ATC's commitment.

Dewey: P40-3 and C30-3

1. This area hosts populations sand hill cranes, blue herons, loons beavers moose eagles variety of turtles as well as a wide variety of plant communities. Infringements on wetlands and lakes are unavoidable in the proposed "Dewey Lake" pathway. These wetlands act as valuable habitat for plants, birds, and moose and the combination of forested landscape and wetland act as a combination - regulate both stream water flow and stream water quality. The watershed that surrounds and includes both Dewey Lake and Dewey swamp, create the headwaters for Camp Eleven Creek, and this creek ultimately flows into the Escanaba River. Changes to headwater systems are particularly meaningful as they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.
2. We are very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to maintain the easement area of the transmission line.
3. We believe that the power line and associated implementation activities will likely threaten eagle-nesting sites, of which we have several.
4. MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property ((>9,000 contiguous acres, with small embedded roads). Whole watersheds are included in the property, and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. The Erickson pathway effectively dissects (cuts in two) the area protected by the club, and will do so at scale much more profound than does the Bryan Creek Road. It will break a large protected space into two smaller fragments. As a result an increasing fraction of the MNWC will be abutting perpetually degraded habitats. Further some species will doubtlessly be unwilling to move through that degraded habitat.
5. We believe the impacts from traffic necessary to operate and maintain the transmission lines will be detrimental to the wildlife habitat we have worked to protect.
6. We believe that the EMFs (electromagnetic field) impacts would be detrimental to wildlife and fish on our property.
7. We believe that the route in the western part of the MNWC (code numbers P40-3, C30-3) would most likely interfere with any future participation in the Michigan DNR's Private landowner Incentive Program (a state conservation program that partners with local owners to reintroduce native tree species throughout the state) which we are presently participating in the eastern part of the Michigan North Woods Club.
8. We currently have all 37 miles of our perimeter fenced in order to protect the natural areas we have worked diligently to preserve. We believe opening the area for the transmission lines will provide additional access that could be detrimental to our 86-year effort. It has been my experience as a part-time resident of the Upper Peninsula and a Family Member of the Michigan North Woods Club for over 61 years, that individuals commonly use utility easements as avenues for travel on recreational vehicles.)

Bryan Creek Corridor: O40-3 O60-3

1. This area hosts populations sand hill cranes, blue herons, loons beavers moose eagles variety of turtles as well as a wide variety of plant communities. The easternmost pathway potentially infringes on three watersheds, all of which have their headwaters within the protection of the Blub's property lines. The first watershed, one that includes Big Drake, Little Drake, Spear, Erickson and Crescent Lake, is the headwater for Bryan Creek. The second watershed includes Trout Lake, and is the source for Clear Creek. The third watershed includes Little Bass, Big Bass and Bass lake Creek. Clear Creek and Bass Lake join Bryan Creek (Bass lake Creek doing so well south of MNWC property), and this larger version of Bryan Creek ultimately flows into the Escanaba. Changes to headwater systems are particularly meaningful - they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

2. We are very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to maintain the easement area of the transmission line.

3. We believe that the power line and associated implementation activities will likely threaten eagle-nesting sites, of which we have several.

4. MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property ((>9,000 contiguous acres, with small embedded roads). Whole watersheds are included in the property, and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. The Erickson pathway effectively dissects (cuts in two) the area protected by the club, and will do so at scale much more profound than does the Bryan Creek Road. It will break a large protected space into two smaller fragments. As a result an increasing fraction of the MNWC will be abutting perpetually degraded habitats. Further some species will doubtlessly be unwilling to move through that degraded habitat.

5. We believe the impacts from traffic necessary to operate and maintain the transmission lines will be detrimental to the wildlife habitat we have worked to protect.

6. We believe that the EMFs (electromagnetic field) impacts would be detrimental to wildlife and fish

7. We believe that our Jack Pine areas, which provide ideal Kirtland's Warblers' (an endangered species) habitat, will be disturbed by the transmission lines.

8. We believe that the route in the eastern part of the MNWC (code numbers O40-3, O50-3, O60-3) will conflict with our agreement with and commitment to the Michigan DNR's Private landowner Incentive Program (a state conservation program that partners with local owners to reintroduce native tree species throughout the state) in the Green Hills. The other route (P40-3 and C30-3) would likely interfere with any future participation in this program.

9. The Erickson pathway also infringes on the Green Hills, an area that includes large stands of mature hemlock (unusual for the Upper Peninsula).

10. We currently have all 37 miles of our perimeter fenced in order to protect the natural areas we

Dear Kenda

As you can see no maps have been attached to this e-mail ,and you have yet to answer my question about these corridors.

- 1) why are there 2 new corridors shown coming into my property
- 2) I was told that I would be getting an explanation of these corridors.
- 3) I was told the reason these corridors were there was that there is an existing right of way, which there is not. This property has been in my family for over 100 years and there are no give rights of way other than the existing transmission line
- 4) I was told that you would supply me with the information of these existing rights of way, if they exist.
- 5) I was told that I wouldn't get a song and dance?

Ely Township has had property owners express concerns with The Bay Lake Project. Concerns include property devaluation caused by power lines going thru private property, loss of forest land acreage, environmental impacts and erosion at stream crossings, and powerline rights of way will encourage Trespassing on private property.

Thing to consider use existing power grid corridors, construct lines along county and State Road rights of way and underground installation.

Re: P130-3 Ely Township/Marquette County/Michigan

We would like to go on record as opposing this project for the following reasons We will lose valuable river frontage. We are the only property owner that takes such a large lot. Our privacy will be compromised which is a major part of the property's value. Pollution of the river by herbicides is a concern. River runs parallel to section line & is only 120' to 140' from it. There will be impact on wildlife & wetlands. We currently have a wide variety of animal & bird species that make their home in this type of environment. The aesthetics of overhead transmission lines are not consistent with our rural area. We have too many "right of ways" and corridors @ the present time, that are used & abused by 4-wheelers & snowmobiles. The cost associated with this project will be passed onto the consumers, increasing our cost for electricity even more than we are currently charged. Because of wetlands along this projected corridor, costs will be incurred. Please seriously consider M95 Hwy corridor as your prime N-S route. Mr Gary Johnson, Republic Township Supervisor is supportive of this, per our discussion on 05/23/12. When it comes time for site survey, your surveyors must contact me, so I can be present during this process on our property. We have also e-mailed these comments but had trouble getting into your site. We reserve the right to make additional comments in the future.

Subject: Bay Lake Project P130-3 Corridor

We would like to go on record as opposing this project for the following reasons:

* We will lose valuable river frontage, in fact we are the only property owner within the proposed corridor that takes

such a large hit.

¿ Our privacy will be compromised which is a major part of the property's value.

¿ Pollution of the river by herbicides is a concern. The river is 120' to 140' west of section line. This will impact our

wildlife and wetlands. We currently have a wide variety of animal and bird species that make their homes in this

type of environment.

¿ The aesthetics of overhead transmission lines are not consistent with our remote area. We have too many right of

ways and corridors at present time that are used and abused by 4-wheelers and snowmobiles.

State property

surrounds our acreage.

¿ The cost that is associated with this project will be passed onto the consumers, increasing our cost for electricity

even more than we currently are charged. Because of wetlands along this projected corridor, costs will be

increased.

¿ Please seriously consider use of the M95 corridor as your prime N-S location. It is my understanding that Mr.

Gary Johnson, Republic Township Supervisor would support this. He shared this with us at the 5/23/12 meeting

in Ishpeming.

¿ The proposed corridor crosses the only access road into our property. This would be like passing under high

voltage lines every time you turn into your driveway at home. I don't think you would appreciate this on your

property.

¿ When it comes time to conduct site surveys, your surveyors must contact me so I can be present during this

process.

We are also sending these comments via regular mail and reserve the right to make additional comments in the future.

Jim and Sheila Richards

MY MAJOR CONCERN IS MY COTTAGE IN THE P130-3 CORRIDOR. YOU HAVE MY CONCERN/COMMENTS SAME AS IN COMMENTS FROM TED PEPIN, ELY TOWNSHIP SUPERVISOR. MY CONCERNS WERE ALSO NOTED IN MY LETTER TO THE EDITOR IN THE MINING JOURNAL DATED MAY 14. MAJOR POWERLINES WITH STEEL PLES & WIRES ARE NOT PART OF OUR NATURAL LANDSCAPE! ATC DOES NOT SHOW A SOCIAL RESPONSIBILITY TO SHOW CONCERN FOR THE PRIVATE DOMAIN AND NOT USE EMINENT DOMAIN TO FORCE THE ISSUE LIKE A DICTATORIAL REGIME THAT SAY TOUGH, WE ARE THE BOSS. OUR LAND WE THOUGHT WAS OUT PRIVATE DOMAIN FOR OUR CHILDREN AND GRANDKIDS AND OTHER RELATIVES! THE BOTTOM LINE IS I DON'T WANT THIS HI-POWERED KILOVOLT TRANSMISSION LINE PASSING THRU MY SMALL 40 ACRE PLOT NEXT TO MY COTTAGE! THANK YOU! PLEASE USE ANOTHER CORRIDOR!

Bryan Creek Corridor: O40-3, O50-3, O60-3

As a member of the Michigan Northwoods Club, I strongly oppose the proposed construction and operation and maintenance of high-voltage lines through club property. The MNWC has worked to protect and preserve ecological diversity and biological diversity for almost 100 years.

Endangered, rare, or threatened specie would surely suffer from the intrusion of this project. The Bald Eagle Protection Act, Endangered Species Act, Michigan DNR Private Landowner Incentive Program, and Michigan Wetlands Protection Act all apply to the MNWC corridor being considered. Other paths of construction in areas where less harm will be done must be considered. All of us recognize the importance of maintaining strong ecological diversity. Building in this corridor will threaten both plant and animal life.

Sincerely,

(signed)

I have no objections to the proposed power line and would hope we would be part of the grid. I would like more dependable service, we have way too many outages. Since the ELF Station closed, dependable service doesn't seem to be a priority.

I also have 4 rental units on C.R. 581 (very south end of Little Perch Lake) with full kitchens, that would be good for long term stay if workers needed someplace to stay. When the replacement gas pipeline was put in, some of the workers stayed here.

Thank you

Just wondering if the proposed possible line that skirts close to Big Shag Lake will follow the existing power line route

from Big Shag Lake to Mud Lake? Thank you.

Re: Corridor C80-3

Greetings,

In selecting property to build a home for our retirement, I travelled the UP for a couple of years with my mobile amateur radio equipment. The purpose was to check out possible locations with respect to radio interference issues caused primarily by powerlines & industrial plants. Several potential areas were eliminated because the electrical interference would have severely curtailed world-wide radio communications.

Our present location is approximately 3 miles from the present 345 kV line near the Escanaba river. In 12 years, I have had no interference issues from this line. Our domestic power service is at the end of a low tension line coming from our North. It terminates at our pole, and our dropline feeder is underground. Past our property is all State Forest for a number of miles, with no grid service. Amateur radio performance has been exceptionally quiet & good.

If the new 345 kV line is sited to pass through corridor C80-3, amateur radio short wave radio communications will be impossible at my location. I would be forced to quit a hobby I have pursued for 56 years and had hoped to enjoy in my retirement. But please don't think of this as just one more NIMBY request, for there is a large population of amateur radio operators throughout your Blue Lake Project!

My suggestion would be to simply locate the new 345 kV line through remote, unpopulated, areas instead of along existing roadways, where people are concentrated.

If you wonder just how much of a problem this is, I suggest you try the following simple experiment. While driving during the daytime a few miles away from an existing 345 kV road crossing, turn on your AM car radio, tune down to the bottom of the band (near 550 kHz) where no stations can be heard at all, and turn up the volume so you can hear the background noise clearly. Then proceed along the road, passing under the 345 kV line. Quite impressive, isn't it? Now imagine trying to hear a small, weak signal from the other side of the world.....It's very much like trying to listen to a quiet musical selection on your living room sound system with a chainsaw running flat out in the room! Not nice.

Please consider alternative route rather than one that runs near Little Shag Lake near Gwinn Michigan. This is a well

used recreation area and having the power line too close to it will affect property values. Please let me know if this is

under serious consideration.

Steve Lillie, Customer Service Manager, had an opportunity to discuss Mr. Robinson's concerns with him by phone on May 30. The individual that was at Mr. Robinson's property was an employee of USIC Locating Services who performs underground facility locates on our behalf. We have planned work for pole replacements in this area which was the reason for the site visit.

We shared the customer concerns with USIC and they will also be following up with the customer and the employee that was at the customer's site.

Customer lives in Gwynn, MI in the U.P. This morning
he was standing in the back of his house looking out
bayview window. A man walks up and customer sees

I

him in the window. Never came to the house, or
contacted customer in any way. Customer went out
~ and he asked him who he was. And he said he works
for and marks lines for UpCo and ATC. Customer
says, "I don't know you. Don't you let people know 1
when you're on the property?" Customer then asked
1 the man for ID and he points to the truck, and says "my
ID is in the truck." He was abrasive. Not used to having
people just showing up. He had flags and paint in his
hand. Customer would like to know what's going on on
his property and would like contact at the house before
they send contractors out. They don't even wear
uniforms. There are two there now.

The day before a contractor from ASPLUND came to
remove brush, but before they did the work, they came
to his door and identified themselves. They were nice
gentlemen from UPCo and deserve a raise. They took
the courtesy to ID themselves. They explained that
ATC owns the lines, and UPCo services the lines.

This isn't his first rodeo with ATC. They come in and
just absolutely take over on his other property. It
makes customer nervous for someone to come on his
property, especially when he makes no attempt to
show 10. In an emergency,
expects to see 10 and be c
it's understandable, but he

I have property on G-10-3. I am 100% opposed to any new construction on my property. The damage done during previous gasline construction is still visible and has seriously devalued the property.

The wetlands here cannot sustain anymore destruction. The area is home to several generations of protected species such as moose and wolf. A cow moose, her two calves and a bull moose were recently sighted here. The wolves are also visible at times.

Further, trespassing and destruction of private property have become an issue due to illegal easement access. The property is posted and no unauthorized access is permitted. As such, we have already retained legal counsel.

Yes, yes, yes, please hurry with elec to our area. We and all our neighbors now use generators and some solar for power (we own all of Bug Lick Lake in Marquette County of Humboldt Twp.) We would like to retire to this area but need full time electric (you are "A200-3) our land butts the east side of the high voltage power lines & the #5 snowmobile trail. All our neighbors would sign-up. Please hurry gas prices are out of reach up here. I will not be able to make any of your meeting hope this will do. Thank you.

Good Afternoon,

I attended the public comment session in Ishpeming last week. Thanks for presenting, there was a lot of good information shared at the event.

If the projects are approved, which entity controls the rate of charge, the MPSC or the WPSC?

The map indicates existing 345KV lines feeding from Plains into Marquette supplemented by an additional 345KV from National Mine into Marquette. How much additional capacity will the proposed project provide for the City.

What is the present capacity of the WEPPCo plant in Marquette and will these feeds be adequate to support future demand projections?

If the plant is decommissioned, will ATC be coming back with additional requests for more routes?

There are homes along the west side of M95.

The present power line A200-3 is already cleared. East of M-95.

We have a buffer of trees between our home and the highway which cuts down on traffic noise. We wouldn't appreciate having these trees cut down! We choose not to build on the highway because of noise.

(1) At the meeting held in Ishpeming on 5/23 we were told (if you use the Elf Line which goes through our property) we would have to pay the taxes on the 150 ft easement even though we couldn't use it and that is not fair. We didn't pay taxes on teh Elf easement or the road that goes through our 40 acres either. Since that area has been deeded back to us, we have planted trees & don't want them destroyed again as well as the ones coming back on their own in the past 6+ yrs since Elf pulled out.

When Elf had it, within 30 ft of our front yard ORV's continually crossed our property using the easement as a right of way - disturbing our peace & privacy, and our camp was broken into twice. We do not want to see that happening again. We are only here in the summer months and are unable to protect our property year round from vandals.

(2) Our camp is even closer to the property on the West side owned by the Republic Youth Assoc. - 20 ft from that property line.

(3) The graves of my Mom & Dad are only 126 ft from the W - cleared Row (Elf) on the NE side.

(4) If you take 150 ft of our land (Elf + 50 more) you will completely destroy our camp area. Even though we have 40 acres, we only use the 30 on the left side of FFG, close to Elf. If you take 150 ft running through the 30 acres, you might as well purchase the whole 40.

(5) Electric costs will raise too & our costs are already 3 times greater than at our home in Ind. for the same amount of electricity. Our bills there average \$30 a month & never over \$90 with 24-7 air conditioning all summer.

(6) It is my understanding you could follow an existing line coming up M95. I think you should highly consider that option. I'm sure less property owners would be affected. Side by side with easy access.

(7) It would destroy my property values in case we would some day want to sell. Who would want to purchase this place if high tension wires were right outside the camp door?

Please consider my concerns & comments!

Dewey Lake Corridor P40-3 C30-3

I believe the impacts from traffic necessary to construct, operate and maintain transmission lines will be detrimental to the wildlife habitat we have worked to protect for 86 years. This proposed pathway would infringe on wetlands and lakes. These wetlands provide valuable habitat for plants, birds, & animals such as moose. The watershed that surrounds and includes both Dewey Lake and Dewey swamp creates the headwaters for Camp Eleven Creek which ultimately flows into the Escanaba River. Changes to headwater systems affect everything downstream. In this context there is no ecologically-friendly herbicide.

We believe that the power line and its implementation and maintenance will threaten our eagle-nesting sites.

Bryan Creek Corridor: O40-3, O50-3, O60-3

For 86 years our club has had the goals of conservation, reforestation and propagation of fish and game. Whole watersheds are included in the property, and large animals with large home ranges, such as wolves, moose, eagles and cranes can use the MNWC as a contiguous refuge. This pathway really cuts in two the area protected by the club and will do so on a much larger scale than the Bryan Creek Road does. Thus, an increasing fraction of the club will be abutting perpetually degraded habitats. This route will conflict with our commitment thru the DNR's Private Land-Owner Incentive Program to reintroduce native tree species as well as infringe on an area that includes large stands of mature hemlock (rather rare for the U.P.)

Richard Norman & Marilyn Andrew - Member of MI Northwoods Club - 624 Elliott Ave, Marquette, MI-Ishpeming city

Bryan Creek Corridor: O40-3, O50-3, O60-3

These comments are directed to the O40-3, O50-3, and O60-3 corridor as proposed in The Bay Lake Project of The American Transmission Company. The efforts of the M.N.W.C. to continue its policies of conservation, reforestation, and propagation of fish and game will be seriously jeopardized by a transmission line of the size proposed. The opening of such an area as will surely occur to A.T.V. vehicles year round will be a disaster to their separate watersheds as well as breeding grounds and living area for diverse wildlife. A commitment to Michigan's D.N.R. by The M.N.W.C. to reintroduce native tree species will not be able to succeed with such an intrusion.

Comment Date: 07/26/2012, by Richard Norman Andrew

Seg:

Communication Type: Formal Comments

PDF Name: C_RAndrew072612a.pdf

Dewey: P40-3 and C30-3

These comments are directed to the P40-3 and C30-3 corridor as proposed by The Bay Lake Project of the American Transmission Company. The 86-year efforts to promote conservation, reforestation, and propagation of fish and wildlife will be seriously endangered by a transmission line of this size. The Dewey Lake watershed feeds into the Escanaba River and anything that negatively impacts the headwaters obviously will have a negative impact on everything downstream. Such watersheds are fragile and cannot withstand such intrusions as the proposed power line.

PARALEGAL/LEGAL ASSISTANT

This letter is to advise that I am the attorney for the Catholic Diocese of Marquette. On April 26, 2012 the Discalced Carmelit Nuns received a letter regarding possible route options for new transition lines between Green Bay, WI and Ishpeming, MI. The Carmelit Nuns have asked me to forward to you their objection to the option which proposes passing the line across their property along M-95 in Dickinson County. The Discalced Carmelit Nuns are Cloistered Nuns who lead a monastic life of silence and solitude. The construction of any facilities across the Monastery would directly and severely disrupt that monastic life. This does not represent what some would consider a minor intrusion for a property owner, but would represent a direct interference with the Nuns ability to carry on their monastic lifestyle of silence and prayer.

Please keep me apprised of any on-going discussions, and any other further information that you may need to assist you in making the decision to avoid using this option for your transmission line.

Sincerely yours,

SWANSON & DETTMANN, P.C.

Certainly there must be a more appropriate route for the proposed high-voltage power lines than the Bryan Creek Corridor O40-3; O50-3 and Dewey P40-3; C30-3. Considering the pristine condition of the area for the plants and animals there should NOT be any activities - including power lines - that would be introduced into these areas.

Bald & Golden Eagles, Canadian Lynx, Kirtland's Warbler and Cougar are just a few endangered or threatened species that will be impacted.

Please plan a more suitable route for these lines and leave the pristine woodlands and wetlands for the natural inhabitants. Thank you for your consideration.

Sincerely,

(signed)

Behalf of Margaret Pach

Diane Pach (POA) -> Margaret Pach & Joseph Pach (sister) under check

See attached letter

Regarding: MARGARET A PACH ESTATE & PROPERTY--AND--JOSEPH M PACH ESTATE
PROPERTY IN HARRIS, MICHIGAN.

WE are MARGARET A PACH'S POWER OF ATTORNEY FOR HER ESTATE AND PROPERTY.
OUR BROTHER, JOSEPH M PACH'S property and estate connects with MARGARET PACH
PROPERTY.

THE FAMILY OF MARGARET PACH & JOSEPH PACH OPPOSE ANY DISRUPTION, ANY
CROSSING, OR ANY ALTERATION OF THESE ESTATES OR PROPERTIES.
MARGARET PACH'S HOME--ON THE MARGARET PACH ESTATE--IS NEAR THE OLD ROAD
AND HAS A LANDSCAPED ORCHARD OVER A HUNDRED YEARS OLD WITH ADJOINING
WETLAND WITH VITAL WILDLIFE AND GROWTH. SURROUNDING THE HOME--IS VITAL
AND CONSTANTLY USED--AGRICULTURAL LAND WITH INLAND WOODS AND WETLAND.--
ANY CROSSING INTO THIS HOMESTEAD FROM ONE FOOT TO HUNDRED FEET OR
BEYOND WILL ENCROACH AND INVADE HER HOME AND LANDSCAPE!
JOSEPH M PACH ADJOINING PROPERTY HAS A SIMILAR MAKE AND COMPOSITION.

ALSO, THERE ARE UNDERGROUND PIPELINES WITH NATURAL GAS RUNNING
UNDERNEATH EACH PROPERTY.

BOTH MARGARET PACH AND JOSEPH PACH HAVE MEDICAL HEALTH ISSUES. WE
PROVIDE DIRECT CARE FOR MARGARET PACH. THE HOMESTEAD--WITH ITS
SURROUNDINGS--ARE CONDUCIVE FOR THIS FAMILY PROCESS. JOSEPH PACH USES
HIS LAND in the CAPACITY OF AGRICULTURAL AND LOGGING TO HELP PROVIDE AND
SUSTAIN FOR BOTH MARGARET AND HIS CARES--AND HOUSEHOLD LIVING.
ALTERATIONS OR DISRUPTION OF MARGARET PACH'S HOMESTEAD AND PROPERTY
AND JOSEPH M PACH PROPERTY WILL DRASTICALLY DEGRADE OR DESTROY PROPERTY
VALUE.

WE OPPOSE AND DO NOT WANT MARGARET PACH'S OR JOSEPH PACH'S PRIVATE
FAMILY PROPERTY USED AS A "DUMPING-GROUND" OR AS SOME "CORPORATE-
FOOTHOLD" FOR UTILITY EXPANSION!!WE OBJECT UTILITY EXPANSION IN THIS AREA;
HOWEVER, IF IT MUST COME TO THIS AREA, THEN STAY ON PAVED U.S. 2& 41 HIGHWAY
WHERE THERE IS ALREADY COMMERCIAL DEVELOPMENT AND NOT DESTROY A
PRIVATELY OWNED RESIDENCE--IN WHICH THIS PROJECT COULD IMPOSE SAFETY AND
HEALTH CONCERNS UPON OUR FAMILY AND HOMESTEAD. THANK YOU.

GRETCHEN HAFEMAN AND DIANE PACH-DAUGHTERS OF MARGARET PACH AND
SISTERS-JOSEPH PACH. TIMOTHY PACH-SON OF MARGARET PACH AND BROTHER OF

Dear ATC:

Thanks for the information regarding the possible projects. I did attend one of your meetings in May. I don't have any concerns at present; I may not be affected.

Future concerns for me would be regarding the environment (fish and wildlife) and aesthetic concerns for the environment and land.

I will try to keep informed and will look for future information from you.

Sincerely,

Jeff Harding

Thank you for the information related to the Bay Lake Project.

As a land owner I am concerned about preserving the environment. The information on your website indicates you are prepared to take appropriate measures in the preservation of nature.

My understanding of the map you've provided, indicates the purposed route of your power line running east of the Michigamme River. The river is approximately 2 miles east of my property. I do not ascertain any difficulties from your purposed route.

Please keep me informed of progress on the Bay Lake Project.

Thank you

Thank you for your mailing of information concerning your possible lines coming quite close to our property where our home is situated: (going along M-95, southerly our home is located near the highway). If a vote would be possible, we'd appreciate the line not be near the home; possibly the western side of this property would be best "if" your plans would consider that.

This is my comment.

Sincerely,
VW

I am opposed to the idea of a new power line running through my property and approximately 100' from my hunting camp. I am concerned with the potential affects of electro magnetic fields for my young sons and the devaluation of the property, due primarily to the closeness of my camp to the proposed power line. This camp was built by my father, brother and myself as a get away from the daily contacts with manmade structures and developments, and obviously this will be negatively impacted by the construction of an ugly power line directly in the view of my camp and property. Please relocate it in a different route away from my property.

ATC - Bay Lake Project Comments

I'd like to start out by saying we are NOT opposed to the expansion of the current power system even though it WILL affect our property no matter what you do either by reducing the value because of the view or because you have to run the new lines over our house. We are one of the lucky ones who own property adjacent to the trunk line right of way at the existing relay station. Our property can be found under David & Mae Belle Erickson, Tilden township, reference or section number A310-3.

We went to the open house Wednesday May 23rd in Ishpeming to get some information but came away more confused than when we went... No one there could give us any specific information concerning our property, even though it was agreed upon by all that the upgrade "will definitely" affect us. After the meeting we spoke to my brother who owned property east and south of us and the information he received was completely different than what we were told. We were told the existing right of way would be increased 150', he was told 500'. We were told it HAD to go north up the existing right of way next to us because it directly ties to the proposed new relay station, he was told they could reroute the lines around us and come in from the west or north because the three existing lines were all that you are allowed to run in an existing right of way. We were told the new lines would be a two post, three line system similar to the existing ones except the poles are steel, he was told it would be just like the big steel six line high towers that run through Wisconsin around Crivitz where the 2 lane (141) branches to four. What I'm getting at is that all we are really looking for is the truth. Let's be honest here, this system is not for Tilden Township like the news is reporting, it's for CCI, Tilden Township's population is too small to require another redundant line. All we want is truth, please.

We would really like to talk to someone who can shed light on what is going on. How long will it be before we know for certain if the system is going through and on what side of the existing right of way? We are retired and are planning on selling our home in the next year or so and these plans have led us to make many improvements on our home including two additions, a workshop, a pole barn and paved driveway in the past seven years to build retirement equity. Obviously we don't relish the idea that we may lose what we have worked for. As it stands now we can't sell or even think about selling because of what we "don't" know, unless you buy our place, which may have benefits for you as well.

All we are asking for, for now is that someone please contact us and give us some honest answers. Being located where we are, we know we will be affected, and most likely someone there knows how we will be affected. It would be nice if when people ask us, and they do, "how is this going to affect you and are you being kept in the dark or is ATC being helpful" we would like to say you are being honest.

Thank you for your time and we look forward to hearing from you soon.

Bryan Creek Corridor: O40-3, O50-3, O60-3

Regarding proposed transmission line corridor O40-3, O50-3, O60-3:

A North/South corridor in this area would bisect the property of the MNWC which is an organization dedicated to preserving the ecological habitat of northern Michigan. Bisecting of the property will fragment this protected area.

A North South corridor should be selected based on minimal environmental impact and ideally utilize a corridor that is already used by utilities, rail, or highway.

Thank You!

PDF Name: C_GHarmon080612a.pdf

Dewey: P40-3 and C30-3

Regarding proposed transmission line corridor P40-3 & C30-3:

The Dewey Lake area and areas immediately south of Dewey Lake consist of a large area of wetlands and streams which host a large variety of wildlife that will be adversely impacted by a transmission line. That area of wilderness is currently little impacted by roads, powerlines, gas lines or other similar activities until an East-West corridor is reached several miles south.

A North-South corridor should be selected based on minimal environmental impact and ideally utilize a corridor that is already used by highway, rail, pipeline, or other major corridor.

Thank You!

Subject: FW: Questions regarding Project Area 3

To whom it may concern,

We are aware of the upcoming informational open house on May 23, 2012 regarding project area 3. We do plan on visiting during the open house as our work schedule will allow. It would be very helpful for us if we could have a couple of questions answered prior to this open house. This would allow us to expand on our questions further at the meeting. We have taken the time to read your wealth of information on your web site and we would like to thank you for that. Although the site has been very informative, we were unable to find answers to the following questions:

(1) For the 345 KV line that is going to be between Green Bay, WI and Ishpeming, MI (Project Area 3):

What is the actual Easement/Right of way width required for this type of line? (345 KV) The web site states "75-100 feet or more depending on the type of facilities"

.

(2) What is the regulation of the distance of a residence/dwelling to the 345 KV?

(3) If it is determined that the new 345 KV line is routed down our property where there is already an existing line:

Would the new 345 KV line be placed on the south side of the existing lines?

Your cooperation in answering these questions would be greatly appreciated. Thank you for your time.

Due to several residences and multiple children living on county road PRE, we strongly suggest that the proposed Bay Lake Transmission Line not be routed down county road PRE.

We encourage you to route the line approximately 3/4 mile West of County Road 581 (where it intersects PRE) and travel North to meet the gas pipeline route. This route would provide the least amount of impact to the residences and children. Thank you for your time.

In looking over the proposed routes we think the best one to use would be following the gas pipeline from CR 601 near Republic. Then heading East to the substaion in Tilden township. to use any other route would bring the power line to close to existing houses. There is also an airport in the area where we live.

BECAUSE OF THE NUMBER OF RESIDENCES THAT WOULD BE AFFECTED BY ROUTING THE NEW LINE ALONG A-285-3 A290-3 CO. RD. PRE AREA. I AM OPPOSED TO THIS ROUTE. WE ALREADY HAVE AN EXISTING LINE HERE. I PAY TAXES ON THE PROPERTY - BUT CAN'T USE IT. - ANOTHER ISSUE IS WITH KEEPING 4-WHEELERS, SNOWMOBILERS, ETC. FROM TRESSPASSING.

MY HOPE IS THAT YOU WOULD RUN THE NEW LINE ELSEWHERE. POSSIBLY ALONG WITH THE GAS LINE G-10-3 THAT WOULDN'T INTERFERE WITH AS MANY PERMANENT RESIDENCES.

THANK YOU

Having another transmission line close/on my property is a detriment to the sale of mine. Possible placement of the line on my property opens it up to trespassers - snomobiles, 4 wheelers etc. Damage by them to property & themselves makes a liability to me.
There are a number of small airports in my area that should be considered. As well in my area, have a number of residents with children - your control of underbrush, by spraying, is a health concern to me. Plus the overspray to pets is a concerns as well!!! I suggest you strongly consider another route - and far away FROM me! I have health issues that could be a result of your stray electricity!

Concerning this proposal, I/We along with all of our neighbors are EXTREMELY AGAINST it!! The proposed area and placement of these lines will affect a large residential area with many families and children. The safety of my children is a BIG concern. Another big concern is the lowering of our property values; By clearing a large area of my property! This proposal will also affect two existing airports (utilizing the second proposed area (The old ELF Powerline site would be a much better option effecting little to if any residents and private property! I strongly stress my Dislike and disagreement with your initiative to place/run lines through our area!

I retired from an electrical utility after 34 yrs. I believe this transmission line is essential to our region & the enormous growth that taking place. A large transmission line to serve the U.P. and act as a back up will stabilize our future growth and concerns for years to come.

I don't go along with all the Federal and State regulations, litigation and taxes and fees that accompany these kinds of projects.

Big government doesn't serve the people or look out for our best interests. Keep the government out of the way so we can prosper and grow.

We attended the informational meeting in Escanaba.

Our name tag reference is

"BayLake_05222012_1-70031"

our Segment number is G703

We do not want this transmission line on our property. We already have a gas transmission line, and do not want another transmission line.

Find another more direct route - such as along Highway M-95.

My Land is near the Big West Escanaba CR 557 in Wells Township. Is it possible that this area could get electrical power to the camps located in this area? If it has not been thought of could it be talked about.

If the project comes through my acreage property will I still be able to use it for pasture? Will this project bring any income to the community? Will you pay a for the rightaway one time like the pipeline does? Will you put the land back to organil as you can after placeing poles and guide lines? Will the powerlines affect people or animals? Will it have the annoying hum of big power lines? Hope you can answer some of my questions and good luck with your project.

Sincerely,

Subject: Bay Lake Project

My name is Frank Bartoszek and I have a house at N19419 Swede Road in Perronville, MI. The literature sent announcing your project shows a rout that is uncomfortably close to this residence. I understand that this route is preliminary, a ¿30,000 foot view¿ and subject to change. I would hope (expect) that the eventuality of the process will result in a route that will have the least impact on personal residences and property. I know that I will certainly deny the installation on any part of my little portion of paradise and will band with adjacent property owners to see that the line(s) are placed along the least obtrusive, environmentally friendly route and not the most convenient (cost effective) for ATC.

Correspondence has been sent to and should continue to be sent to 2000 24th Avenue, Hudsonville, MI 49426. E-mail updates can be sent to bart5951@att.net as well as frankb@oakmi.com.

Thanks in advance for your consideration of these comments.

Subject: ? P190-4 Potential Corridor ??
Importance: High

Hi,
Our Company, Mighty Deer Lick, Inc., owns the Mighty Deer Lick Ranch which is worth several million dollars. See us at : www.mightydeerlick.com

We do not wish to impede progress, but our company has a 400 acre wildlife sanctuary that (P190-4) would run through.

We are requesting this information from you prior to our meeting.

1. What is the purpose for (P190-4) Potential Corridor? It would make more sense and be more cost effective to use the existing right of way (A80-4) less than 2 miles away which runs parallel along US 2 & 41.
2. What is the source of your Public Subsidy?
3. We are requesting all plans, detailed construction plans, environmental impact studies and along with any and all details pertaining to (P190-4)

We look forward to hearing from you soon.

Thank You

Sincerely,

Ted Janke Vice President

Comments:

One of your proposed sites follows a property line between our neighbor and our property line. Proposed new line transmission area is along line your company calls 010-4. this line would GREATLY devalue the property value for both homes and cause an eyesore for all the rest of the area we call upper Pine ave. Our small but residential area is full of kids and people of all ages who enjoy being outdoors and we all love the closed in feeling of all the tall pine trees in the area. It would be a detriment to our residential area. It makes no sense to put a line along this route because it would surely hinder any or all new building of homes in this area. Please reconsider this area for the new transmission lines. Menominee County has abundant vacant areas that would not affect the property value of residential homes. Please take the 010-4 area off the corridor list. thank you Jeff and Rosalie Naser

Comments:

My father Theodore Hartner is the main land holder of 80 acres, for which you plan to run power line along the west border of his and his children's land. This breaks his heart and ours too as he logged this land more than 70 years ago to buy it. Our family has kept it very undeveloped per his wishes and view it as Hartner Park, with an out house, hunting shack in the most modest sense, and a shed to store tractor and trailer, also sawmill, that Ted built by himself with pulleys and non electrical equipment. At 92 he did drive with his wife of 65 years to protest this. I was not able to drive 7 hours on a work day to this meeting and you did not inform our family of the changes till after the meetings in Peshtigo area around May 8th. Please understand that I too protest and do not understand why WI power company land was recently sold and state land borders our land but you chose private land to impose upon. It seems that your power is unlimited to better Escanaba area. Our favorite area of the eighty is central to the buildings seen at this site. Please make the passage as narrow as possible for you will find this is one of the nicest developed areas of the land and moving everything would not be possible. How can you move hand made buildings? We do need the road that passes to the north along the Jones meadow to come and go from our land it is difficult to visualize but if you work south from the Brendemihl property you can see it. Better yet pick somewhere else as the money you may offer will never be worth the value of not having power lines on the property.

Interest - west of hwy 41 - 5 miles and north and wouth 5 miles off Seven Hill Road just out of Bagley.

Because of my work schedule and distance from the meetings, I will be unable to attend.

I would like a very detailed map of what may be going on in the area off highway 41 just north and west of Daggett, Michigan. It would include Nadeau and Holmes Townships. What is a POTENTIAL CORRIDOR and what does it entale?

Pristine areas are being built up at a rapid pace - We are constantly infinging on lands that are inhabited by endangered species eagles are in abundant in this area. Recent cougar sighting have been in the MNWC area. Your proposed route would endanger and destroy, in some areas, the areas for these and other species. For the good of future generations; please consider a different route.

Re: Bay Lake Project

Menominee County Michigan

Dear Project Manager:

This law office represents Nick G. Thoney, his trust and beneficiaries in matters relating to their property in Menominee County Michigan.

This letter is to put the Bay Lake Project on notice that the Thoney family opposes any power line route that will cross or claim a right-of-way through Thoney property. Please note this opposition to route for the Bay Lake Project power lines if there will be contact with the Thoney property.

The Thoneys are giving early notice of their opposition in hope the Bay Lake Project will plan an alternate route if necessary to avoid contact with the Thoney property

yours

Subject: proposed transmission line

You will run into some opposition for part of a proposed line running through mid-Menominee County Michigan. I have attached two maps. Looking at your proposed lines please note the line that extends most of the way between the Beecher and the word Nadeau. That line crosses over the Carney Fen Natural Area.

If you expand the open right of way you will need to disrupt some seasonal cottages and a farm along Co Rd G-18. And you will still need to go around the Fen. By moving the western end of that line to the south you can use an old railroad right of way on State land and also go to the south of the Fen. Most of the line would then be crossing State land. This will not significantly increase the length of your lines. Overall cost may be less.

In regars to reviewing your letter we are definately opposed to your company putting a power line near our home. We are located near P110-4.

It would be a big invonvenience if your power line went a long our land. Where would our Round Bales go? You can put your power line along the old railroad track the Soo Line. Please do not put your power line by P110-4. Thank you for you time

I am writing due to concern I have of the power lines your Company may put up on Pine Ave. in Powers Michigan. I wish you would reconsider and take another parth I know you have many options and the line on Pine Ave would be so very close to our home. I have two young boys and I do not feel this would be good for their health!

Thank you for your time.

Today was a beautiful Upper Peninsula 1st day of Summer 90 plus degrees, sunny and breezy. We love our home located on Pine Avenue in Powers, MI AND we oppose the Corridor 010-4 running along Pine Avenue in Powers, Michigan. Our home is located at W3974 Pine Avenue, Powers, Michigan and it's a lovely peaceful location. Please reconsider and opt for another route for Corridor 010-4. Move it from our residential area, please. Corridor 010-4 running through Pine Ave where we reside, would completely destroy our property value and it's also a health concern. Hoping in advance, we thank you-

As we have written before, we are opposing the Corridor 010-4 running along Pine Avenue in Powers, MI. Our house is situated on this Avenue, and we have several neighbors - all of who have well kept homes. We are so proud of our clean and neat section of Pine Avenue and are truly upset with having this area with your power lines. Please reconsider - use an option rather than Pine Avenue for Corridor 010-4. We may seem bothersome, and for that we apologize but I'm sure you realize how upsetting this is to us. Thank you-

We are writing to oppose the Corridor 010-4 running along Pine Avenue in Powers, Michigan. Our home is located at W3974 Pine Avenue, Powers, Michigan and it would completely destroy our property value. We have worked so hard to keep our home up to scale and we just love this area. For you to use this corridor area would be heartbreaking. Please consider your using an option for Corridor 010-4 and move from this residential area. Thank you very much

We reside at W3974 Pine Avenue, Power, Michigan and understand that there is a possibility that you will run Corridor 010-4 along our avenue in Powers, Michigan which we oppose.

Basically it would completely destroy our property value, and our health may be at risk. Which also includes our other residents in the area.

Please do not consider using this corridor when redefining this area.

Thank you.

Subject: Power Lines

To Whom it may concern,

Hello our names are David and Jessica Naser. We live in Powers Mi and our home is located under one of the proposed routes for the power line project. We support your project and understand how important it is to Upper Michigan. However we are requesting you consider putting the power lines on a different more rural path than ours. We have two beautiful children and a dog. Our neighborhood is fully of healthy young families. We are concerned that the power lines will cause health problems and will also be an eye sore for our beautiful community. Please consider using the rural route proposed in your planning that travels through the woods and ore grade. Thank you

Subject: Transmission line project

Dear Sirs,

The P110-4 corridor runs right through residential area. There are many men, women and children that live in this corridor. I'm sure you wouldn't like your children and grandchildren living under these transmission lines. I beg you to use a more rural route.

Thank you

David and Jessica Naser

Bryan Creek Corridor: O40-3, O50-3, O60-3

Dewey Corridor: P40-3, C30-3

I strongly would object to an ATC transmission line being located in either of the above cited corridors or anywhere within the property owned by either the Michigan North Woods Club or Stuart and Bonnie Bradley Trust. Since 1926 the MNWC has operated as a club focused on conservation and outdoor activities. Bald eagles, wetlands, and various other threatened and endangered species likely use the Club's 9,000 unbroken acres for use as a travel corridor and habitat for propagation. A transmission line would jepordize these environs for breeding, travel, and sustanance. It would scar the vistas and run counter to 86 years of conservation and practices to which the club has been dedicated.

First of all it is very understandable if there is a need of more power and a transmission line. But my idea of going through a well established farming community isn't the best idea to my thinking! including all the valleys and ridges that would need to be cleared etc!! Why not follow I-90 where land is more level and not as much clearing would be needed etc. and maintenance would be easier and more assessable for repairs, etc.

Bryan Creek Corridor: O40-3, O50-3, O60-3

I am opposed to the installation of a 345 KV power transmission line thru the Bryan Creek Corridor Erickson (O40-3, O50-3, O60-3)

The Eastern most pathway infringes on three watersheds all of which have their headwaters within the protection of the Michigan Northwoods Club property lines.

Changes to these headwaters affect the integrity of everthing downstream.

I am concerned about the environmental impact on plant life and wild life not only from the installation of this project but from the maintenance.

The Michigan Northwoods Club has a commitment to the environment and the local ecology and this project would negatively impact the area. Choose another method to accomplish your goals.

PDF Name: C_JJuett080312c.pdf

Dewey: P40-3 and C30-3

I am opposed to the installation of a 345 KV transmission line thru the Dewey:P40-3 and C30-3 route.

This project would severely and detrimentally impact (negatively) wildlife that is located in it's pathway. The populations of sand hill cranes, blue herons, loons, beavers, moose, eagles as well as a wide variaty of plant life would be forever negatively impacted.

The Michigan Northwoods Club, whose property this project would cross has a commitment to conserving and preserving the flora and fauna of the area.

Choose another method to accomplish your goals.

Bryan Creek Corridor: O40-3, O50-3, O60-3

I am concerned about the proposed transmission line that would invade this area of the Michigan Northwoods Club. Specifically the easternmost route potentially could infringe on three watersheds, all of which have their headwaters within the protection of the MNWC property lines. I am concerned about the animal populations that reside in this area which include: blue herons, sand hill cranes, loons, eagles, moose and a variety of turtles. I believe the existing plant communities would be impacted in a negative manner. This route conflicts with the MNWC's agreement with and commitment to the Michigan DNR's Private Land-Owner Program that partners with local owners to reintroduce native tree-species throughout the state. (in the Green Hills)

PDF Name: C_JJuett080312a.pdf

Dewey: P40-3 and C30-3

I am opposed to ATC's proposed (O40-3, C30-3) route through the MNWC. The resulting impact on the MNWC would have such a negative impact on sustaining the environment and wildlife populations, that the future of the animal and plant communities would be in jeopardy. We have worked for 86 years to protect and conserve this property. The ATC needs to reassess their plans.

PDF Name: C_GSmith090412.pdf

Dewey: P40-3 and C30-3

We are concerned that the proposed transmission lines will cause many adverse effects on the environment. They will infringe on wetlands & lakes. Use of herbicides to control plant growth in access ways will greatly damage these environmental treasures. There will also be damage to native species such as sand hill cranes, blue herons, loons, beavers, moose, eagles, turtles, frogs & toads. So, there is environmental danger associated with extremely high frequency emfs. We have large stands of jack pine which are ideal nesting sites for the endangered Kirtland Waublen. Both the Bryan Creek & Dewey Corridors will conflict with the MNWC agreement with the Michigan DNR conservation incentive program - including the Green Hills area which has large stands of hemlock. As a member of Wisconsin's Green Tier program, ATC has pledged itself to preserve environmental stability. We believe the proposed transmission lines would be inconsistent with this commitment.

PDF Name: C_GSmith090412a.pdf

Bryan Creek Corridor: O40-3, O50-3, O60-3

We are concerned that the proposed transmission lines will cause adverse effects on the environment. They will infringe on wetlands & lakes as well as native species such as sand hill cranes, blue herons, loons, beavers, moose, eagles, turtles, & amphibians. The Bryan Creek corridor, in particular, will essentially dissect the area which the MNWC protects. Some species would undoubtedly be reluctant to find a home in the corridor, especially since there would be heavy impacts from traffic of equipment used to operate & maintain the transmission lines. We have erected and maintained 37 miles of perimeter fence to protect the natural areas we are dedicated to preserving. Access roads for the proposed transmission lines would allow travel by recreational vehicles which would have an additional adverse effect on the environment.

Bryan Creek Corridor: O40-3, O50-3, O60-3

The Michigan North Woods Club is a nonprofit, membership-based conservation organization. Since its founding in 1926, the MNWC has consistently devoted its time and resources to the conservation, reforestation and propagation of fish and game on our grounds. The construction, maintenance and operation of the proposed high-voltage powerline will threaten the very existence of the ecosystem we have committed nearly a century to protect.

Bryan Creek Corridor: O40-3, O50-3, O60-3

As members of the Michigan North Woods Club. We have dedicated ourselves to the continued conservation and propagation of wild life in this area. I am concerned in particular for the disturbance of nesting areas in both sections (P40-3 and C30-2 and O40-3, O50-3, O60-3). We have maintained this property to accomodate the needs of eagles, ospreys, sand hill cranes, herons, hawks and many, many song birds. Our jack pine forests attract the Kirkland Warbler which is an endangered species. WE also have a nesting Kingbird, a bird which is uncommon to areas south of Canada Disturbance of habitat for these and other animals defeats the purpose of a conservation club which has protected the area for over 86 years.

While we realize how vital this project is to all of us, no one wants it in their own backyard (NIMBY). That being said, I will tell you we were somewhat dismayed to hear that we are possibly affected by one of your route choices. Here are our comments: Our land & our neighbor's abuts the county forest here in Abrams. Should you decide to cross it, you will be disturbing various wet lands, cutting mature forest, & wiping out certain rare plant communities. Here are some of them: Trailing Arbutus, Shinleaf, Rattlesnake Plantain, American Bittersweet, and Petasites. I am sure these plants extend into the county forest as well.

Should you locate on the other side of the R.R. tracks, you already have an established corridor with existing power lines that could be widened. These are our thoughts. Thank you, Sincerely,
Mary & Dave Anderson

We would not be pleased if the new lines would be put on the EAST SIDE of 141. We moved to this location for numerous reasons. Two of which are being set back off the highway and having the trees as a sight and sound barrier. The other is the view we have looking east out of our home over looking our beautiful pond.

We would think that following existing lines would be the way to go, as those must be fairly direct routes. No matter where you put the land/trees would have to be cleared . So why not just expand on existing lines

Sincerely

After reviewing the proposed Rt# M280-1, I would like to suggest a southerly route through the proposed preliminary route. A rt of way approx 1/4 mile south of Geano Rd makes more sense and provides greater benefits than the North Side. 1) less wetland impact, 2) fewer land owners and parcels to deal with, 3) Avoid developing subdivision, 4) Avoids mitigating Govt Land contracts 5) avoids traversing two navigable waterways. Further my property alone is mostly wetlands, contains a soon to be active Christmas tree farm (my Retirement), and is a 25 yr MFL Plan that is at over 16% open lands any more open lands will jeopardize my contract with the State, and Subject me to unpredictable tax implications for the next 25 years. Please consider geano beach SO side for your right of way.

American Transmission Company Bay Lake Project,

Please take the more direct route from the proposed Green Bay substation to the Morgan substation for the Bay Lake Project transmission lines. Avoid going thru the town of Abrams.

We do NOT want the proposed transmission lines in Abrams, Wisconsin.

We have land on both sides of Hwy. 41-141 in Abrams, WI. Our land is within two of the potential corridors shown on the Bay Lake Project map. (Reference numbers from ATC map, A780-1 & U200-1 .)

We have gone to great expense to purchase our land and to make ongoing improvements to our properties on both sides of Highway 41-141-such as sewer access for future residential development.

We do NOT want transmission lines to be part of our landscape or to take up our valuable land through easement or construction.

We do NOT want transmission lines to hinder the future use of our land or to affect the value of our land.

We do NOT want the inconvenience and loss of income during construction of these lines and what it can do to interfere with our customers as well as day to day operations.

Addresses of our properties in Abrams:

We live in a small community at the corner of county ZZ and Highway 64. Across the road from us is Meatski's Meat Market and Graetz Manufacturing, there are also several other homes surrounding us and a few private airports in our area. We already have 3-phase overhead and below ground lines that go past our home. there are power transmission lines already a mile or more down the road from us and along Highway 141. Please! Don't come through our community with your transmission lines. Stay parallel to the existing lines or why not build a powerplant up in Michigan? Personally, I need to sell our property soon due to recurring skin cancer, I now spend to much time outdoors in the sun to maintain this yard. Your transmission lines will make this property very hard to sell and lower its value. Please plan another route. Thank you.

We feel that existing corridors, one to the east of Hwy 141 & one to the west of Cty Rd S. should be utilized. New poles can be put next to existing ones, saving on wasting more land. Could it ve run along the pipeline?

We have an airplane runway on our land that is used. It would be dangerous having high lines near it.

There is always health concerns living under the high lines.

The environment will be less damaged using existing corridors. Less impact on wildlife, wetlands, endangered plants as well as losing valuable farm land.

James M & Merle Hanna - 10783 County Road B, Oconto-Brazeau Town

I own a small farm just south of Klondike on County B. The farm includes barn and farm buildings. A house which I rent out. My house is to the North, just next door. The houses are close to the road. I believe the 141 route would be a better choice for this line project. This would be to big of a impact for County B. I lost some land a few years ago, when they widened the road. I can not afford to lose more.

Hello, I attended the Crivitz, WI information session on Thursday 10/4/12 and reviewed the plans. I was shocked to see the transmission line route alternative that affects my property. I am strongly opposed to the line going thru or near my property which is a farm that I want to enjoy living on without seeing any transmission towers that would ruin the countryside views. My land is also used for trap shooting and goose hunting with shotguns which is not compatible with high powerlines. I was also shocked to see the segment that affects me (Segment P250-2) would also go along Montana Lake just south of me which has a park, camping, picnic, beach and boat launch very close to the potential lines which is very detrimental. The new line should be routed along the busy highways Where it would not affect the country landscape. It should be placed along Hwy 141 which would minimize property-holder damage. I strongly object to the line going past my farm where it would do irreparable damage to my land and property values not to mention ruining the Montana Lake Park.

(My property is at 11074 Nasgovitz Rd)

Thank you for your help. (Please call me if you (rest of comment cut off)

I am writing regarding the property my family owns at 11074 Nasgovitz Road in Coleman, WI. Please do not put the transmission lines through our family property or in the park near Montana lake. The segment P250-2 plans will destroy the beauty of the property my family loves and will take away a wonderful park from the people who live in this area. Please put the transmission lines along Highway 141 and not through our family property.

Thank you,
Hannah Hewitt

I am writing to express my shock and extreme concern about the transmission line route that could potentially be run through my property at 11074 Nasgovitz Rd in Coleman, WI. This segment (P250-2) will not only destroy the countryside that I have enjoyed with my family and friends, but I am also incredibly upset to see that it could also destroy a beautiful park along Montana Lake. Why would this even be a consideration when it makes much more sense to place these towers along Hwy 141? My family and friends farm, hunt and vacation on our property. Putting these lines through our land will not only diminish the monetary value of our home and property, but also take away our ability to enjoy the beautiful Country landscape we value so much as a family. Also, it will deface and devalue the park near Montana lake that so many people enjoy. Does ATC really want the people of this area to think of them in such a negative way? PLEASE DO THE RIGHT THING! Put the lines along Hwy 141. Thank you for any help in this matter.
Sincerely, Linda Hewitt

We currently live with 100 feet of the already established power line and do not want another line near next to or around our home. The power line now has so much voltage that the grass in the yard and gutters put off an electrical shock. You can hear the power lines and feel the electricity in the area. We already have had trees removed. I wish not to see another line running by my house.

We had planned to attend the May 16 meeting, but a conflict arose. Would like a more detailed map showing project information relative to our address and relative to your existing lines. It is very hard to determine this from the map enclosed in your mailing.

RE: A80-2

I have two issues/questions/comments.

1. Do two 345 lines in close proximity compared the noise? (wet weather - hum & crackle)
2. Please consider placing line to West of existing line to minimize noise for residence.
3. Please relocate osprey nest on existing pole to different area. Birds eat fish out of my Koi pond. Very expensive fish that are being fed to their babies.

Comments:

Prefer line to go along Hwy 141. Please do not apply herbicide under existing power lines that are already on our property. Would like to be notified on all survey, field work or helicopter work (just had this occur. Loud and scary.) Please stay west of existing transmission lines to avoid impacting narrow white pine plantation that was planted to block view.

(C-270-2)

I would like to express my displeasure in the project of a power line going through our property. First of all the safety issue has got to be a problem. With other ways of getting power such as wind and solar this wouldn't be necessary. Another concern is the fact of property values will never be the same once the power poles are up. From what my brother told me about the meeting he went to you really didn't have any answers about payment for lease of the land.

I wanted to drop a line concerning your project. Back in the ninetys the township widened our road and didn't want to move the electric poles so they moved it all my way thus ruining my driveways. A few years later a neighbor decided to put up storage rental sheds right across from our farm house thus ruining our beautiful view. Everyone said they had the right to do their projects and I didn't have anything or very little to say about it. I am about to retire and really don't want an eye sore like your poles going through my property for the rest of my life. Who does? This time I will acquire every means legal available to me to prevent this to happen on my back door. C-270-2

We built our home 9 yrs ago to raise our 5 boys in the country. We really do not want these lines to run through or near our property. We already live near a huge tower (I beleive it's a cell phone one). I worry about the effects of EMF. Aside from that there are lots of homes, woods, & protected wetlands in the area. We have hard woods & pines on our land and I worry that you would cut them down! There is also a part of our land that is protected wetlands by the DNR. We also live about a 1/2 mile from the Pensaukee river. I believe there ar many other routes you could choose that would have a much less impact on People, land & wildlife. We have discussed it as a family & if these lines go up near our home we will move. Please consider all these things.

Thank you!

Subject: NO Power lines in my backyard!

Please do not put your high voltage power lines in my backyard. Consider rerouting the lines to the nearby abandoned railroad tracks crossing at section P170-1, as an alternative solution. I see no reason why this cannot be achieved. Below are some factual bullet points listing my numerous concerns and opposition to your destructive plan. I am located at 9250 Gohr Road, which is positioned directly in the path of, Segment M310-1.

¿It is common for ATC to use herbicides to keep the easements clear, which could be a concern to nearby residents and cattle. I have an underground well and do not wish to have my well poisoned by your toxins.

¿High voltage lines create electro-magnetic field exposure and some studies link EMF exposure with increases in childhood LEUKEMIA. I have 2 small children of my own and do not want YOU gambling with my children's health. Not to mention the health of our family pets, nearby livestock and in turn the devastation it would have on the livelihood of farmers as EMF's can stress cows leading to a decrease in milk production.

¿Children living within 100 meters of high voltage lines have TWICE the risk of developing LEUKEMIA, children 0-5 are the most vulnerable so their risk is likely to be even higher! My brother who lives along Segment P210-1, he has 2 children under the age of 5 and are extremely vulnerable to your proposal! The ATC, should take our health and the health of our children seriously, and PHASE OUT building high voltage lines through existing residential areas. After all, it's at NO advantage to us, only a negative disadvantage!

¿The number of children developing LEUKEMIA has been steadily growing over the last 50 years. In 2001, Dr. Sam Milham reported a link between the growth in electricity supply and the growth in LEUKEMIA incidences in the USA.

¿ATC has not said what effect the cost of building these proposed lines would have on our electric bills. In these hard economic times any increase could be detrimental to everyone affected.

¿There is NEVER a time when high voltage lines doesn't decrease the value of property, because of the view and know danger of electric magnetic fields. My family and the surrounding community would not only see a decrease in the value of our property, but also a decrease in the overall value of our land. Many of us have our much of our nest eggs in our property and this would be devastating to lose any part of our investment. The Institute of Planning, Zoning and Eminent Domain estimates the loss of land value in rural areas due to these projects to be 18-53%! Our home values will plummet or become un-saleable.

¿Electro-magnetic emissions from high voltage power lines may cause denial, damage, destruction, or life threatening effects to people and their property such as:

¿Cancer such as LEUKEMIA especially in CHILDREN

¿Pacemakers

¿Electrocution from falling or downed lines

¿Fires started by downed lines

¿Contamination of culinary water drainage patterns and systems

¿Electromagnetic Fields from power lines are also linked to adult cancers, depression and suicide. Depression, miscarriages, headaches, insomnia were more common in the people who lived near power lines, compared with those who lived further away.

Bay Lake Formal Comments - Additional Comments by County/Municipality

¿According to the World Health Organization, such EMF's from power lines can also cause: headaches, fatigue, anxiety, insomnia, prickling and/or burning skin, rashes and muscle pain.

¿Further, the following serious health problems may arise due to EMF effects on the body: risk of damaging DNA, risk of cancer, risk of leukemia, risk of neurodegenerative disease and risk of miscarriages.

¿EMF's also effect animals and plant life! EMF's exert stress on plants/crops which leads to economic loss. Our crops, plants and animals need to be safeguarded.

I strenuously object to any such proposed power lines close to my property. My demand is that there is a cease to the present proposed power lines in Segment M310-1 and Segment P210-1. A new plan should be implemented to use the abandoned railroad tracks crossing at Section P170-1, which will have minimal impact on residents and children. We all want the best quality of life for ourselves and mostly for our children, ATC's proposed plan will NOT improve that quality yet put my family at risk! My family (Kayla 7 years old, Kalli 5 years old), my brothers family (Greg and Jenny Sikorski, Vivien 2 years/Gavin 4 years old) and my parents who live in the path of Segment P210-1 (Kenneth and Catherine Sikorski), own a large piece of property that will be bisected and essentially ruined by ATC's construction or DESTRUCTION! The economic loss and health risks/costs to our families are a critical piece your company MUST consider. How can you put a value on that?

I am a concerned mother who's family will be directly affected by this proposal. I attended an informational meeting and was shocked to hear that YOUR own employee admitted that they too would not want high voltage lines running in their front yard! No one likes to live in the shadow of a monstrous power line. My family wants these high transmission power lines as far away from us as possible! These lines will not just affect ourselves, they will impact our children and our children's children, as the risk of childhood LEUKEMIA doubles within 100 meters of high voltage power lines. More over, these power lines have no benefit to us, only ugly cancer causing towers that will stand out, in time, as symbols of industrial decay and destruction of all livelihood in it's path.

PLEASE consider routing the power lines along the abandoned railroad tracks crossing, Segment P170-1.

Thank you for your time,

Sherry and Sean Coutley, our children Kayla Coutley and Kalli Coutley.

#1: Why are we expected to subsidize the Upper Michigan power needs? They aren't paying for it, rather we will be paying for it in our bills but yet get nothing out of it!

#2: In the future, when the economy picks up and this areas power needs grow, is the U.P. going to be giving power to us or are we going to need to build more power plants or increase our generating capacity at additional costs to us?

#3: From the stated costs of this project, the cost of constructing a generating plant in the U.P. probably wouldn't be alot more and they would be set for years to come. If done properly future expansion could happen there.

#4 - Why not use existing right-of-ways if this project MUST be built.

#5 - The Gohr Road corridor affects approx a dozen homes in just our 2 1/2 miles. A rediculous plan. No we don't want this running in our front & side yards, Would You? Leave Us Alone!

I found out one of the possible options for this power line runs on the west property line of my Dad's land. This is where we planted Evergreens for the past 30 plus years. I/we are now enjoying the beauty of these trees. It also supports an array of wild life. These trees would have to be removed for the easement. It takes years for trees to grow. This area took years for us to develop & now you want to take it away. I do not want to walk under power lines. This would also run along the public land that has walking trails. This is not a good place for this power line. Please use a different route.

I am a property owner that would be affected if the power lines were to go from Morgan straight to Pittsfield in the town of Chase, Oconto County. Our property is in a new subdivision that has no pre-existing lines, railroad, gas pipeline or major highway near it. We do not want to have large transmission poles in our neighborhood!

My family's home farm is near the section line in this area and could also be affected. Some of the property is woodland and some is wetland where you are proposing to route transmission lines. I am concerned about the impact of farming under the lines and the affect on dairy cattle. Please choose another route! Thank you for thoughtfully considering my comments in making a decision about the route for these new lines.

I have implanted defibrillator so I am really concerned about the stray voltage. I walk or bike three of potential corridors which are P210-1 and M320-1, M310-1. I would prefer these numbers S600-2 or S603-1 which runs the hwy 32 if it needed to come close to our house.

I of course is concerned how much it will cost us as customers on our bills.

Please do not route this project in the projected area. My bothers farm is directly in this route and the new subdivision I have property in (off Van Dornick Rd.) will no longer be a place to build on and certainly lose its value.

JUST A COMMENT ON THE BAY LAKES PROJECT. MY PROPERTY IS SOUTH OF SAMPSON ON COUNTY HIGHWAY C. THERE IS ONE PROPOSAL TO ROUTE THE POWER LINE THROUGH THERE. MY QUESTION IS, WITH THE MINING OF GRAVEL IN THAT VICINITY, AND THE BLASTING THAT GOES ON, WILL IT HAVE AN EFFECT ON THE POWER LINE TOWERS OR POLES?

THANK YOU

We have huge concerns with towers in yard or near resident, we are senior's and already have health issues having the power lines near us would both physically & emotionally add stress & discomfort. We would never purchase property with power towers or heavy curciuts near the home or adjacent property we vote no to 2157 County C as a option. Please keep us informed on what plans are on the table. Didn't see this letter until today Thursday 24th May 2012.

Thank you

I oppose Route # 1N4A E36 for the new proposed line. These lines are very close to residential properties and sub-divisions. I would have health concerns and would effect future development in this area.

The other route makes more sense. This is Pipeline # 1N5A. There is already a gas right of way on this line, this area would remain rural longer.

Read attached page

I attended the May 8th open house at Oconto Falls, WI and viewed the proposed routes for the transmission lines. I was shocked to see the way the proposed line would go near my home.

For several reasons,

- 1.) The lines do not follow section lines or property lines, instead splitting most neighboring property. Doing 2 90 (degree) turns near our home on section. 1N4A (E36)
- 2.) Going thru wet lands where many wild life and migratory birds, such as sand hill cranes nest & live. 1N4A (E37)
- 3.) Very close to sub-divisions and homes. 1N4A (E35)
- 4.) The other route makes much more sense, because there already is a gas right of way. The area surrounding the proposed route near my home is much more likely to develop into residential area sooner because of its closer proximity to Green Bay. The gas line right of way will stay rural longer.

That being said, I am very much opposed to the route near my home at 1N4A E36 and would much prefer the gas pipe line right of way 1N5A.

I am totally against having any power lines running on or near my property. It is not being used for my purpose or anyone else in Wis. Will depreciate my property. And also stray voltage is a problem. I bought this property for hunting and getting wood for fuel, not to have any of it clear cut to run power lines thru it!!

What is the actual route within the preliminary route (500' - 3000'). What flexibility is there for actual line location. What is the siting criteria

What is fair compensation? (give example)

What are other impacts ie...Health, electromagnetic interference and how is this compensation calculated?

When will and who will choose the actual route. What is the criteria per selection. When will final decisions be made. What is the appeal process?

I am extremely concerned about the proposed path of the transmission lines being right in my back yard. The effects of the lines on my families health is my biggest concern. I have four young children. I read the information on your website but I find it of little comfort--your company has good reasons to be biased and certainly will not agree there are health risks with living close to these lines. My second major concern is the destruction of trees on and near our property and the effects of such a line on our property value. We invested all we had to buy this property and have been working to plant as many trees as we could afford in our fields. and around our house.

We are writing to express our disagreement with two proposed routes: P140-1 and T80-1. Route P140-1 is proposed to follow the back property line of our lot. We purchased this lot because of the undeveloped back yard. This route would adversely impact the feel of our property and greatly reduce the value. We have also purchased 2 adjoining lots as part of our retirement portfolio. P140-1 would negatively impact our ability to get value for these lots in the future. You will see where our house and 2 adjoining lots are on the enclosed map. We also are not in favor of route T80-1. In the future we plan on selling our existing house on Karen Ln and building a retirement house on our property in Angelica, WI. We bought this property because of its scenic rural nature. Route T80-1 would destroy the scenic beauty of the MT Bay Trail. I don't know that I would build our retirement home there if Route T80-1 is chosen and I am concerned about my ability to resell this property should I choose not to build there.

Hello,

I was raised on a farm across from Segment A580-2. After High School I moved to Green Bay. I have lived in the city for 30 years.

After my father passed away he left my sister, Linda Johnson, and I 40 acres of land. She lives on her 20 acres and I have the other 20 on Segment A580-2.

My Husband and I would like to build a house on land. This will be our retirement home. We are planning for the year 2018. We do not want High Voltage Transmission Lines in our front and back yard.

Also my Husband is an avid hunter. You would be cutting down trees and brush in our woods and that would affect wildlife. Please reconsider building these Transmission Lines on Segment A580-2.

Thank You,

Ruth Johnson Clark

I attended both of your meetings in Oconto Falls. Your line that goes from Stiles north goes through our yard with a tower on our front lawn, we hardly notice it.

Looking at the large maps it look like going straight north of Morgan is the shortest route. The other shortest route looks like going north of Morgan to the gas pipe line then following it to the line going up the Belgian Rd.

This would be my recommendations.

We do not want any more power lines on our property or near our property. The Rail Road Tracks are in very poor condition & The Train has gone off the Tracks several times on this stretch, worried it will hit the power lines now That's There. Check it out on Butterfly Lane. The Train Lean's very much Towards The lines, They must know about it cause they move very slow.

Hi,

I live in Lena and was not available to attend the meeting that was in our area. I am concerned about the route this line is taking. I, along with others, don't want a huge power line sitting in my front or back yard. I see that the line does run in the Lena area. Will it run along and follow the main highway? We all understand the importance of power but I see no reason to run these lines through highly populated residential areas.

If send information via email, please put my email address on a that list.

Thanks,

Laura

Bay Lake Project Comments

I understand that we need power. I don't understand why companies run power lines through customer's front yards. With the open land available in both Wisconsin and Michigan, why aren't these lines re-run near but away from homes. Right across the street from me is a current power line. It defaces our property. According to the map I looked at on line, this power line is going to follow the current lines through the middle of Lena and across our front yards. My one complaint is that your company has not re-located these lines out in the country. If there is a reason, other than financial I would like to hear it. And if it's financial, it seems that all power companies manage to make money regardless of the cost placed on the customers. That being the case, use some of your profits to run new lines away from our front yards.

Is there any possibility that lines could be buried and no longer visible to anyone? That would be a step in the right direction.

Best,

Laura

We live within 50 ft of transmission lines right now. They cut through our backyard right now and am concerned with any health effects that additional lines/voltages may pose to us. At what point is it too mucyh? If they determine that it could be too much, what is the next course of action? Does the line company purchase our house?? Please advise prio to us having to contact an attorney with regards to this matter.

PROJECT #1 & #2 WOULD BE BETTER SERVED BY RUNNING THE LINE ALONG THE RAILROAD RIGHT-OF-WAY ALL THE WAY UP TO PEMBINE AND THEN FOLLOWING HIGHWAY 141 UP TO NORWAY. THIS ROUTE WOULD IMPACT FAR FEWER RESIDENTAL AREAS AND PUT TO USE LAND THAT IS ALREADY BEING USED BY THE RAILROAD.

We live in a densely populated neighborhood just north of CTHS in Sobieski. An existing, though seldom used, set of train tracks runs behind our property. On the other side of the tracks from our property is an existing power line.

We are opposed to having another set of power lines built in this narrow corridor, through existing homes. We are concerned that the footprint would encroach on our property as there are buildings on the other side of the tracks from us.

Approx. 1 mile away is the Hwy 41 corridor, a much more appropriate setting for these large power lines. We would fully support any effort to build the lines in the Hwy 41 corridor.

I want to be sure to be on future meetings held in this area. The current map includes our neighborhood, just short of our land at end of Linda Lane. I assume this is an approx. type map at this time, correct? How much land is included in the width of where the line is run? Of course we have serious concerns at a personal level. When will a more detailed map of the size of transmission lines and where they are be available? Is this only a proposal at this time?

I own all of those businesses on highway 41. These have been in my family since 1910. I have all of the businesses in the very front along with a house rental. I am opposed of having any transmission lines on my property. There are no businesses across the highway and this needs to be looked at. I feel transmission lines will interfere with my business and I will not tolerate this. These businesses are my bread and butter, therefore the lines should go across the highway. I will be talking with my attorney in regards to this matter.

We have several towers that cross our land, support the project, and request that your interference on the land be timed to avoid the deer hunting seasons this fall. Those start Sept 15 and run into early December. We spend a great deal of time & money preparing our 740 acres for the season and attempt to allow the deer to live as undisturbed as possible. Having several men, trucks, & beeping vehicles interrupting their movements would harm our experience greatly. So remember, Little Suamico area B-4 Sept. 15 or after December 7 would be very neighborly. Thank you for your consideration.

I recognize the need to upgrade the transmission lines along this corridor. I also appreciate the fact that the lines need to go somewhere, but when I look at the property to the east of Hwy 41 I see fairly open gourn versus the wooded area on the west of Hwy 41. The east side is also more commercial, less residential versus the subdivisions along the westside, in specifically our area.

Not really excited. Our Home value took a beating a couple years back, now this will certainly not support a rebound. Appreciate the fact the lines need to go somewhere, but my front yard?

Please utilize the highway corridor for this project. Geano Beach Road neighborhood is made up of families and farms. It is our feeling the presence of a high power transmission line our road will have a very negative impact on our property values, quality of life we've become accustomed to (enjoy kite flying, model airplanes, rocket launching)) and will be very unsightly in this pristine, wooded, farm field area. Much wildlife found here wolf bears cranes eagles
It makes much more sense to place this line on the highway corridor, where there are very limited residences and where the view is already desecrated with billboards, advertising, mega traffic etc. Please do NOT place on Geano Beach Road. It will greatly impact our property value!

Segment U180-1

Our biggest concern is that our home is right on the frontage road (West Frontier) - so it is close to the highway. We are concerned about a pole being put on our property - which would decrease the value and also concerned about a pole being put across from our property. This side of the highway is very residential. The east side of the highway is more commercial and has deeper setbacks.

WE would like to tell you how impressed we were with the Open House. It was well run - informative - and so many helpful people. They answered all questions. We appreciate all the hard work that all of you put into the presentation.

Thank-you

Linda and Tom Morrison

In reviewing your map at County Road S and Highway 141. It looks like the lines will not effect my property as they are going down the center of the highway. Is this correct?

If I am reading your map correctly one of your proposals would come down Geano Beach Rd. in Abrams/Soviesk Area. This would basically be right next to my house. My driveway comes off the west end of Geano Beach Rd. The line would be coming right through my yard and would destroy the natural, wooded setting.

I would vehemently oppose any power line coming through my yard regardless of any compensation offered, and I would use all methods at my disposal to oppose it. Please consider that only a mile north or south of me are Highway D and S both of which could be used as routes that would not interfere with property owners.

Thanks for your consideration

I own both houses and the property at the west end of Geano Beach Rd. (one is under Tibbet Creek LLC) Your proposed route down Geano Beach Rd would run right up my driveway and between both of my houses. It would be 30 yards from the houses. This is the end of a quiet, secluded dead end road surrounded by woods. I purchased these houses and property for the isolation and natural setting. Your power line would completely ruin this. I paid close to \$700,000 for this and your power line would severely wipe out the value of these houses and property. In addition, all the land to the west of me is wetlands with a stream and standing water most of the summer. This is my home and an investment in my future and I would not be agreeable to any settlement. Please consider a different route.

Thank you

MJPierquet

My property is located between Allen Rd and Hwy S on E. Frontage Rd. I am dissabled and have a heart condition and need to know the effects of this electrical line upgrade. I am not far off the frontage rd and even 500' wide could have a serious negative effect on me. My home is less than 500' from the center of Frontage Rd.

I would appreciate a response to this request as I cannot make your open houses.

December 14, 2012

Project Manager - Bay Lake Project
American Transmission Company
2 Fen Court
Madison, WI 53791-8614

To Whom It May Concern:

RE: Bay Lake Project, Preliminary Route/Segments P220-1 and P210-1

As a follow up to my telephone conversation with one of your project team members earlier this year (855-831-5853), I am submitting the following comments regarding the Bay Lake Project Preliminary Routes/Segments referenced above. I was unable to attend your open houses due to my surgery and medical problems this year. I am submitting my comments as a private citizen. My concerns regarding this portion of the project are nearly identical to those expressed in my letters to ATC and the Wisconsin Public Service Commission dated August 11, 2005, with the following two exceptions.

Since 2005, there has been a reduction in the total area of land that is usually covered by surface water saturated soils, and wetland vegetation. The wetland habitat remaining, along with its associated wildlife should be protected. I have also observed and photographed a large "pile" of what appear to be either Butler's or Plains garter snakes. I had taken a number of pictures of these and other groups of the same type of snakes I observed that warm spring day a few years ago, but after going through a few computer replacements since then, the enclosed photo is the only one I can currently find. I believe this photo is very unusual and I will be happy to email a copy to you if you'd like.

In closing, I am requesting that proposed routes/segments P230-1 & P220-1 of the Bay Lake Project be removed from consideration. In addition to the above, most of the land in this area has historically consisted of sensitive wetlands and much of it is still nesting grounds for sandhill cranes and wood ducks, as well as being home for the Blanding's and Wood Turtles. In addition to the harm this route will cause to our ecosystem, passing the route through this area will cause considerable current and future aesthetic and economic damage to us and our neighbors.

Sincerely,
(signed)

P.O. Box 7854
Madison, WI 53707-7854

Dear Sirs:

RE: Central Wisconsin - Morgan - Werner West Electric Transmission Project

I am requesting that the lines for the above-referenced project do not pass through my property. I have notified the WDNR in the past, and ATC, recently, in writing and in person when the ATC field techs visited our property, that one of proposed segments (the one which would pass through part of our property) is not appropriate. Most of our land consists of sensitive wetlands areas and is a nesting ground for sandhill cranes and wood ducks, as well as being home for the Blanding's and Wood Turtles. In addition to the harm this route will cause to our ecosystem, passing the route through our property will cause considerable current and future aesthetic and economic damage to us and our neighbors.

I've enclosed a copy of a plat map showing our property. Wetland maps showing our property are also available from the WDNR.

Please use existing right-of-ways for this project.

If you would like to contact me, please do so at home - 9385 County Road E, Oconto Falls, WI 54154. My home phone number is 920-899-3920.

Sincerely,

See enclosed letter.

10-24-2012

To whom it may concern,

First my wife and I would like to thank you for the well organized and friendly staff at your Oct. 11 informational meeting in Oconto Falls.

We live on proposed segment 1130-1 town of Morgan, Oconto County Hwy. C.

Our concern is the already environmentally impacted areas along this corridor, specifically from quarrying operations which do affect our ground well water.

This area has the potential for more gravel and sand quarrying in the future because of known deposits of untapped resources.

We are concerned about throwing in high KV transmission lines into the equation along with the potential of future land use conflicts with land owners wanting to apply for quarrying permits. I (Dan) am a member of the town of Morgan land use planning commission and know of several potential future quarrying sites on this C1130-1 segment. I hope you can see this might not be a good mix.

Our commission works very hard

1

to reduce future conflicts, especially when we have the time and information your company is furnishing us.

When looking at Project Area 1 Green Bay to Morgan maps you provided us with, we believe since potential substation areas are in the Western project area it makes more sense to use existing corridors, to be more specific like gas pipe line G135-1, G141-1 or even old railroad right of way Angelica - Krakow - Green Valley.

Keeping segments West of Hwy 32 minimizes disruption of more land.

My wife and I have a second concern it's our daughter who lives with us along with our son in law, because they are buried in medical debt.

Our daughter Angela has neurological problems which include seizures and severe migraine headaches this has been going on for five years. My research to this point concludes that high KV power lines near our residence would not be good especially for Angela. The residence behind us

2

owned by Daniel & Jessica Athey has a two year old and they are expecting a baby in March, they are however facing a crisis Dan is battling liver cancer at age 33. I don't think they need this power line near them.

I am speaking on their behalf because Jessica has more than she can handle at this point.

I hope this letter has some impact on your decision in finalizing your routes.

Sincerely,

Daniel Dryja - member Town of Morgan land use & planning commission

Barbara Dryja - concerned parent.

I believe that every effort should be made to run any new lines required in the same areas as existing lines. I would be opposed to using additional property to establish new corridors. I would be extremely against running across my 2 acre parcel or going any closer to my property than the existing lines.

Your admission of reduced output at power plants in the region, tells me you should be looking at the power plants or building new ones up north. Not adding new lines from afar, - Green Bay. Your representative at the Oconto Falls meeting told me one of the main reasons for the new lines is, they are needed as a back up for the back up line that was struck by lightning this spring. When the main line was down for maintance. Won't lightning also strike a new back up line? How many backups do you need?

Your statement - "E.M.F exposure poses any health risk is weak." It has not been proven that it doesn't.

I am against any new power lines for this area.

Reg. 4614 Elm Lawn Rd
Oconto Falls, WI 54154
(Segment A230-2)

I spoke to a representative of the Bay Lake Project by the name of Kenda today. I am extremely concerned about the towers & lines running through my property. My property is narrow and looking at it would be impossible to avoid the structures existing on my property. My home/structures, are in the center of my property, either side of this to the property lines does not leave enough room required for a right of way. When speaking to Kenda she suggested I note my concern here, as did she to the appropriate engineers, etc. After our discussion & looking at an aerial view of my property on her computer. Thank you for your consideration of my concern her as I am unable to attend the open houses. Sincerely,
Amy Furlong

P.S. Less than 1/2 mile North on Elm Lawn Rd running parallel to the existing towers & lines directly from the substation there is a clear path with no homes/structures that would be a concern to the project. Thank you!

I see that environmental analysis being conducted for this project, but has an economic impact study been done for the communities that would be impacted by the installation of these power lines.

For instance... County Road C which runs from Pittsfield (Howard) through Morgan is a well travelled road for people just taking rides to see color in the fall and just like to tour Wisconsin's beautiful countryside, so it has tourism attraction and brings people through these little communities. Putting up these power lines would change the scenery negatively and have a negative impact on these already struggling communities. I propose that these power lines be installed on the least travelled roads to avoid as much negative impact on the view and scenery that people look to enjoy in this beautiful state of ours Please stay off County Rd C - Segment C1160-1 and look more to smaller town road corridors such as P230-1

I would prefer you choose an alternate route such as P230-1 as CTH C ROW is quite narrow near my house and you will need 250-300' of ROW to fit the 2 lines needed in the corridor. I am also concerned about adverse health effects of living near high voltage transmission lines. I know studies are inconclusive but I do not really want to live that close to these O-14. lines

Thanks

Comments:

I am deeply concerned about your Segment C1130-1. This routing if placed on the East side of County C would run parallel to the Pensaukee River as it runs through my property. This placement would result in estimated setbacks from the river of between 200 and 400 feet and would effectively destroy an area that my family has worked to maintain in a native state since my forefathers acquired this property three generations ago. To propose a routing this close to the river would not be environmentally sound nor allowed under WDNR regulations.

The map you sent me so scares me I had to write my thoughts down.

The land on Cty C is my best farm land, Across the front of my century farm house are all trees thats been there for years, I already have a transmission line going through one of my best parcel of land North of the house.

Most of us live here because of the wildlife & privacy - we don't want huge towers/large righ a ways & public access to our lives or land.

I attended the recent meeting in Oconto Falls, Wi. Many many people were there and none to happy, after all it was just a short few years ago we had all been threatened with the same. At this point your 'BLUED' area is quite vague, but our reasons and feelings have not changed and we would like to be excluded in any further projects. Please consider our section has a growing number of families. There is a grade school we have children & grandchildren present I don't want them or us exposed to 'stray rays' Our properties have grown as nature intended & these are private play & hunting. We'd like to keep them 'private' & undesturbed. We have ponds & wetlands. It shouldn't be disturbed while there are exhistig RR/Hwy's etc that could be used. That should be 1st option, then tilled areas (croplands) no people/less wildlife/less possible health risks & easy access. Please consider! Thank you

Dear ATC -

Please be advised that very little has changed in our neighborhood, especially my & my neighbors feelings regarding the installation of one of your transmission routes. NONE of us desire your presence here. We do not want our property values diminished by the presence & sounds of your equipment, much less the stray voltage. I am aware of your science that preaches none of these things occur, but the truth of these matters outshines it. My property is a nature preserve, holding water in areas 90% of the year, supporting much varied wildlife. This should not be disturbed. Your proposed route also passes near a gradeschool. These children should not suffer needless daily exposure to the elements of your equipment. Please remove our area from your list of alternatives.

Thank you!

I am not sure why County D roadway was selected over County Rd E. County E has better roadways and access. I am also concerned for us small plot land owners when you see a 500' to 3000' wide right of way area. What does this do to the value of your home if you have a 345 KV line run right next to it? Does it affect resale value? The towers put up themselves can be considered an eyesore and also may effect home values of people outside of the right of way. I am also concerned about the heavy equipment being on our roadways during construction. Our roads were just redone and the added traffic and weight of construction equipment will present a problem. Will you be covering repair cost so tax payers do not have to pick up the bill?

As ATC considers routes for a new 345-kV line from Morgan to the Plains Substation, we encourage you to use "segment A930-1".

We own and operate the expanding dairy farm located one mile north of the Morgan Substation. Our location is "segment A10-2".

1. As we have built facilities for our dairy herd, we have built at a distance away from the power lines to help avoid the magnetic field associated with them.

2. A new power line located between the existing line and our buildings, would have a definite negative effect on our herd of registered, high producing, high

2. continued

quality Holstein dairy cattle.

3. We currently have Blacktop Feed Storage Pads on both sides of the existing right of way. A new line, located on either side of the existing line, would make this storage unusable. It would cost us \$250,000.00 to rebuild feed storage at a new site.

4. We are in the planning stages of long term manure storage. ATC has granted us an easement under the existing right of way to install an underground manure pipe to connect to this storage. Another line constructed would hinder and complicate the process.

5. A new line between the existing line and our facility site would subject our cattle to harmful effects from the magnetic field to the extent that we would need to relocate our facilities. The cost to relocate facilities including a milking parlor, freestall barns to house cattle, feed storage and homes for ourselves and our two sons who are in ownership with us, would be in excess of 3.5 million dollars, of which we would expect ATC to compensate. This does not include a new land base from which to work from.

6. We are not only a landowner, we are a family business. We are asking you to please consider the consequences for our family farm located at Segment A10-2. We encourage you to use Segment A930-1.

Thank you.

Dear American Transmission Company.

I am wondering if you can give me some information on the power line project to Ishpeming Michigan.

I live in northern Oconto County. I live off of Airport Road in the Town of Mountain.

From looking at your web site, I see a line will go from the Morgan substation north through Oconto County. Is the line following the gas pipeline? Is it going through the Nicolet National Forest?

Could you please e mail me information where the new line will go through my area. It is hard to tell where it crosses HWY 64 in the Town of Bagely going north to Lakewood Wisconsin.

Thank You

Please refer to P220-1 in Morgan, WI.

This potential corridor touches the west side of my property. This portion of my property has standing water most if not all year round. The info I have from the state classifies this area as a wetland. Also my wife and I plan to start building a house in the northeast corner next spring/summer. And if it matters Please reconsider this corridor. Thanks

I am a property owner that is along side the property of Community Memorial Hospital.

I am also a member of the Board of Directors of the Community Memorial Hospital.

I feel locating any expansion of the existing corridor west will be a problem. First you have the hospital itself including equipment such as MRI, Ct scanners, X-Ray s and other sensitive equipment. Also you have a landing pad for the incoming Helicopter for emergency purposes. Keep these issues in your planning.

We want to make sure you are aware of the public beach on the south side of the river next to your corridor for P140-2. This section of the Oconto River behind the dam has much more traffic than the site of your present power line A20-2 because of the depth and width of the river. This is also a residential area with many more home sites on the river already sold. Snow mobile races are also held on this section of the river with large crowds attending. P140-2 is not a good choice for a power line.

Hello,

I am opposed to your possible plans to put power lines along the HWY 41 corridor, and would suggest routes in a lesser populated residential area. These lines would be an eyesore, noisy and devalue property, especially because 41 is so close to streets like Beech Tree Drive, Taylor St, and Ironwood. Please look elsewhere for the needed power lines.

Thank you,

Michele Olson

How close can a house be to a transmission line. By my calculations, if the power line goes on the north side of the gas pipeline that is on the south side of my property, the right-of-way for the transmission line will be about 12' from my house.

My family is Not intrested in having the poles and lines on our property. We built this house on the last of our family land away from utility poles & lines.

We have many wildlife animals we would be concirned about if the lines are put on out property, bald eagles owl, deer, blue birds, pilliated wood peckers, red tale hawks turkey vultures just to name a few. We also use all of our land for maple suryp making.

Please reconsider your route to Leave our property out of it.

Thank you

Dear ATC,

My parcel of land is west of Oconto Falls, on the south side of the Oconto River. It is a 40, with 20 acres of river frontage. The land was passed to me from my father and has been in the family for 70 years. When the present line went through in the early 1960s, the right away was taken for pennies on the dollar and there was no time to salvage all the trees properly. It was a very bad experience for our family. It ruined our frontage value. Now there is a very good chance it is going to happen again with another right of way. I don't want any part of losing more land and forest. Our family has sacrificed once and don't care to do it again.

How do you possibly pay me a fair price for something I don't want to sell and then have another clear cut and ugly pole structures. It is the future use and potential and what can be passed on to my children that will never be realized.

When we were able to retire, we always thought that if we had trouble with retirement resources or a health crisis for myself or my wife, I would have this land as a last resort. There was a lot of peace of mind in knowing that. If the line goes through, the land

(2)
value would drop dramatically. Right now the land is used for camping, fishing, and hunting. My wife, myself, and my son-in-law always deer hunt there. Another line will ruin that. Please go some other place we have already been taken from once.

To: Hovde, David

Subject: placement of transmission lines between Donegal Lane and Oconto River

Dear Mr. Hovde:

Even though I was unable to attend your last meeting regarding the placement of high powered transmission lines

adjacent to my property (approximately 10 acres-ALL residential), I am most interested in this matter. Just to let you

know, I am VERY opposed to these lines going through my existing properties and would be prepared to take legal action,

along with my neighbors, to fight this location so close to our homes. The 10 acres my wife and I currently own are 4

home sites, one where we currently live and the other 3 (@ 2 acres each and all adjoin) I believe would loose most of their

value if these lines are placed through our "backyard". Not only would we loose considerable amount of trees and natural

sanctuary for plants and animals if this project goes through so close to our property, not to mention real estate values. If

indeed your company believes this location is best, then I'd ask for your company to buy my existing properties so I can

make arrangements to live elsewhere. While I'm certain you must have your environmental and impact studies in hand

regarding this area of placement, I think it best you find another way to provide power to people in the U.P. Please keep

me posted on how this process unfolds as I have much invested, both personally and financially in this location so close to

my home.

Sinc~rely,

RE: Bay Lake Project

Dear Sirs:

Yesterday, I visited your information session on the Bay-Lake Project in Oconto Falls Wisconsin. During that session, I pointed out several red flags regarding routes selected for the Project Area 2 corridor. At least two of these potential routes take the 345 Kv lines very near several school buildings. I believe the evidence on the negative health effects of living (or attending school) near such high voltage lines raises red flags.

The route coming north on Oconto County I would pass the Oconto Falls Elementary School and the Oconto Falls High School as well as the Community Memorial Hospital. A second route following the Highway 141 corridor takes these potentially dangerous lines past several nearby K-12 schools including Lena, Coleman, Crivitz, Wausaukee and the Beecher-Dunbar-Pembiné schools. Also, though the maps are not clear, they could also pass by the Niagara Public School facilities.

Frankly, I believe there would be adequate community opposition that could tie up this build out for years and suggest there is a much more acceptable alternative. If you would broaden the present easement for the present 345 Kv line running from the Morgan Substation to the Plains Substation, there would be less impact on schools and children. It appears to run through primarily farm land and woods, bypassing more populated areas.

I would be happy to discuss this with you further.

Sincerely

Dr. Bob Kellogg
Agency Administrator

We own less than 4 acres of land on County Rd K (C100-2). Our back yard is all wetlands and we would be worried about the impact on ourselves and the wildlife with the power lines going through. Couldn't you just use the existing power lines that are already in place from Morgan. It would just seem to make more sense to reuse those lines than to disrupt the people and wildlife in the area!

Thank You!

This email is in regards to the recent questioner sent out concerning the routes of proposed electrical lines. I have questions about my neighborhood, and so do a lot of others.

I know there are informational meetings all over the place. Due to a disability, I cannot attend any of them at this time. Thus this email response.

My neighborhood is west of Oconto Falls and I live on the north/south part of Gray Lake Road, which is about three quarters of a mile in length. The map that was sent, the one with all the wide blue lines, is very difficult to figure out. The blue lines are so wide and the map so small, that it is impossible to determine if the proposal is anywhere near or on Gray Lake Road. My question is, does it affect anybody living on the north/south portion of Gray Lake Road? There are 12 residences on this three quarter mile part of Gray Lake Road.

I am aware of a transmission line about a mile west of Gray Lake Road which crosses the east/west portion. Is that the blue line on the map?

Since I cannot attend any of the meetings, would you please respond by email to me or by phone call?

At the bottom I have added a photo of the north/south portion of Gray Lake Road and the blue dot is my residence.

Thank you,

Richard La Brosse

I have 20 acres of beautiful woods on CC and a relatively new home, I do not want a high voltage power line going through my property, or over my home. build it someplace else.

AS CO-OWNERS OF PROPERTY LOCATED ALONG WISCONSIN'S OCONTO COUNTY HWY "K," WE ARE OPPOSED TO RUNNING NEW, HIGH-VOLTAGE LINES ANYWHERE ALONG HWY "K." WE BELIEVE IT WOULD NEGATIVELY AFFECT THE VALUE OF OUR PROPERTY AS WELL AS THE ENVIRONMENT OF THE NEIGHBORHOOD THAT SURROUNDS OUR PROPERTY. IF NEW ELECTRIC TRANSMISSION FACILITIES & POWER LINES & SUBSTATION MUST BE INSTALLED, IT MAKES SENSE TO DO THAT ALONG 41/141 WHERE THERE IS ALREADY A BIG HIGHWAY.

WE ARE NOT INTERESTED IN SELLING OR LEASING PROPERTY FOR THIS PROJECT OR IN HAVING THE PROJECT OR ANY PART THEREOF IN THE NEIGHBORHOOD OF OUR PROPERTY. THANK YOU FOR THE OPPORTUNITY TO COMMENT.

WE ARE VERY CONCERNED ABOUT THIS. (TO OUR DIS-APPOINTMENT, WE MISSED THE INITIAL OPEN HOUSE IN MAY; HOWEVER, WE ARE VERY RELIEVED TO HEAR AT THE RECENT OPEN HOUSES THAT THERE IS STILL A CHANCE THAT THE PROPOSED LINES WILL NOT AFFECT US.) THANK YOU SO MUCH FOR THE WELL-RUN OPEN HOUSE & PROFESSIONAL STAFF!

13-14 YEARS AGO, WE MOVED OUT TO OUR PRESENT LOCATION, TO PURPOSELY FIND A QUIET, WOODED, CONVENTIONALLY-PERC'D (SP?) PLOT OF LAND, CLOSE TO A NATURAL SOURCE OF WATER, WHERE WE COULD SETTLE & RAISE OUR FAMILY . SINCE THEN WE HAVE ALSO ESTABLISHED A SMALL HOBBY FARM WITH ANIMALS, GARDENS, & A HOMESCHOOLING FAMILY OF 4 SCHOOL-AGED CHILDREN. WE HAVE WORKED HARD ON ONE INCOME TO STAY OUT OF DEBT (PAID OFF OUR HOME) & CONTINUALLY STRUGGLE & STRIVE TO LIVE AS SIMPLY, NATURALLY, & HEALTHILY AS WE CAN WITH WHAT WE HAVE BEEN BLESSED WITH, MUCH THANKS TO GOD! PLEASE, IF AT ALL POSSIBLE, DO NOT TAKE "THIS" AWAY FROM US!

P.S. OUR BIGGEST CONCERNS ARE RE. OUR HEALTH, AND TAKING AWAY THE TREES. ALSO ANYTHING AFFECTING OUR ABILITY TO (rest of the comment cut off)

Subject: Mapping and where the lines are really going to go

David,

looking at your on line map you show a 3 ¿ 5 mile wide track for power lines, can you be more specific and let me know if this is going to cut through my property located in the Town of Oconto on Hwy 22 between Funk Rd and Log Town road. My Dad Richard and myself Bruce Van Boxtel own about 80 acres. Currently we have power lines going through the front part of our land closet to Hwy. 22 these lines run to the Stiles SW Substation located on the corner of Funk Road and Cook Road, are these lines just going to be replaced and you are using the same easement or are you pursuing a new easement?

Thanks,

Subject: ATC Powerline in Pensaukee near our Airport!

Dear ATC,

We recently received notice that you are potentially planning to build a new transmission line near our property at 4954 Kruegers Quarry Rd in Oconto near Highway J. The timing of this notice is somewhat fortuitous as we are just beginning the process of building an airport/heliport on that property. Obviously airplanes and transmission lines don't mix well together. In fact, we chose this property specifically because it had good, clear approaches without any potential hazards such as transmission lines.

Nobody wants a transmission line in their backyard, and we understand everyone has a compelling reason to avoid their property. We also understand the importance of these transmission lines to our local grid, that they need to be built, they need to go somewhere, and somebody is not going to be happy about that. Unfortunately in our case a transmission line goes beyond a mere annoyance or loss of property value. It could become a serious safety issue, or flat render our property unusable for its intended purpose.

Attached are our applications with the State and FAA for our airport. Please keep this in mind when locating your new line. We would be happy to work with you, answer any questions, and consult to the best of our ability. Working together hopefully we can come up with an outcome that maximizes safety and satisfies all. We appreciate your assistance and consideration.

Sincerely,

Dennis Martin

Corridor P270-1 is centered exactly over the area that I am building a house on. It is the only location on my property that percs conventional septic. The perc test was done last summer. My sister's house is currently located in the center of that corridor. Your corridor map shows an easement along the east of my property. This easement does not exist and has been corrected with the county. Putting your transmission lines in this corridor would make it very difficult, nearly impossible for me to construct my house.

Thank You, Joseph Maynard

Note: My sister's house is located on an adjacent parcel "Carla Spice" owner.

Subject: power line route

Hi, we just moved into our place last October and talking to the neighbors they said they received a paper in the mail a while back about possible routes for a new transmission line from Green Bay to Michigan. I didn't get the original mail involving this and just recently received in the mail a brochure saying sorry we missed you on some meetings they had about this. I didn't know about the meetings. What I was wondering if we live by Abrams, WI just north of Green Bay and we live off of County Road J, which they currently have the large metal 4 legged towers going down county J. What is the proposal for going down county J? What size lines are they proposing going down county J with, the 138 or the 345. I went to the website and seen the project map that is all blue but that don't list the specific roads, just a map with the main highways listed. We don't live very far from the power lines now and with having a couple young kids don't want the really high voltage lines going that close to our property. Not sure what the strength going through the lines is now on the 4-legged tall metal towers, do you know what voltage currently goes through there now and also what is proposed for the future going through on County Road J. We live on Deer Place Drive which is a small road right off of County J and right by Sampson Road. Is there a way I can get onto a email list for any future meetings or just want to make sure that we get the mail and that the mail is not getting forwarded to the previous owners when this project may have nothing to do with them because we are the ones now living in the area to possibly be affected. Thanks for the information of what is being proposed at the strength ofline currently there to what is being proposed going down county road J. Return email is zaidelp@yahoo.com Paul Zaidel

Comments:

Hi, was just wondering the area that is highlighted in purple but doesn't have the yellow lines going through it, is that just a area that was considered a preliminary route but at this point the power line will not be going through that area? I see at this point the yellow route is going down Gaeno Beach Road, was just wondering what the purple meant? On the map legend it says inactive route (buffer), what does that mean? Does it mean at this point this route was considered for the lines but will not have the lines going through it? Also what do they do with existing lines that are in this area? Do any large lines get ran on this new preliminary route or do the existing lines in the area already just stay as they are? We just moved into this area last October and were hoping that they stick with the preliminary route of going down Gaeno Beach Road because there are a lot fewer houses down that area to affect anyone but that was probably all taken into consideration when going with the routes. Thanks for the information Paul

Comments:

Hi, looking at the interactive map and our address, the new lines going from Green Bay to Morgan are going to go off on a side road just south of us in the preliminary route. Our address in the preliminary routes has the purple color going through it which according to the legend on the interactive map it says inactive routes (buffer). What does this mean? Does that mean any lines going through there now will be inactive or just that any existing lines will stay the same but it is inactive for the new lines running from Green Bay to Morgan or can you clarify what this means? Is the route going from Green Bay to Morgan pretty set in stone then according to the interactive map or is it subject to change. Right now we live off of County Road J by Abrams and they have the lines running up Gaeno Beach road which makes sense since there are fewer house down that road but we live just a little bit north of there and want to make sure the lines are not going to come and further north of there and come by our house. Right now we are under the purple inactive routes (buffer) it says and just want to know what that would mean for us? Thanks for the information Paul

Map URL: <http://gis.atc-projects.com/BayLake/PublicMap/peMapApp.aspx?ie=-10100506.6079295,5510000,-9429493.39207048,5867000>

I lived at Oconto Falls Electric Coop. 1 block away for 10 years, in those years I got a tumor, my wife has miscarriages my son that was born there is now slow on learning. Put your high power lines and building elsewhere, maybe farm fields or forest. Unless you want to buy my house & land don't come around here!! We've had enough health problems.

Thank You

Leonard Fiedler

P.S. The Kelly Broke also runs along my land there is alot of wildlife in area, I would hate to have to call E.P.A lawyers.

SERIOUSLY, FIRST YOUR ARE DOWN IN THE WAUNAKEE AREA, NOW YOU ARE MESSING WITH THE LITTLE FARMS UP NORTH. I have Oconto Count parcel #'s 038-12-1200111, 038-12-1200214 and 038-10-1000313. From your interactive map I can't tell if you are running one of the big ugly lines through our little family farm. I do see C220-2 above Hoffman road at the front of the farm and C190-2 and the back side which is where we are planning to build by my Grandfather maple trees . What type of lines are c220-2 and c190-2. What does the large yellow shade area mean? The other area is 80 acreas along Chardais Rd and County Road M , two parcels back from Co M. This also shows c200-2. what type of line is this? I attended presentation in Waunakee, you guys pretty much do what you want. Tell me How I can change what you are doing? Will the three hour drive and a vacation day pay ?

After coming from the meeting I felt with no definite plans from you how can we know if this will affect us?

I'd like the line in the North behind our homes so anywhere else is an eyesore.

Coming from city B - down on there is a lot more homes on the N. side at City M too. But behind at the N. end of Skarban Lane going East would be better.

The proposed route through our property along the existing natural gas pipeline. We have fensed in pastures for our cattle on the north side of the pipeline. If ATC decides to use the proposed route through our property, we would prefer that you stay to the south side of the natural gas pipeline because the land is very wet in normal years and the fences will be difficult to rebuild. Thank you for taking our concerns into considerations.

Subject: Bay Lake Project

Hello. My name is Shelley Brennan and I own 40 acres with my husband at 5478 Younger Road, Lena, WI 54139. My telephone number is 920-713-4318 if you have any questions. This is a proposed site for the new power lines to be located and I'd like to explain why I find this very disturbing. First of all, this is my husband's family homestead - it is a square 40 acre homesteaded lot that has been in his family for generations. To take nine acres of that property is excessive - that would be the woods our children run and play in, the area where my husband hunts, and the private and peaceful area I go to find solace. Second, there are already power lines running through the back area of our property - we have already taken on a burden by those power lines running through the property and to expect more of us is unreasonable. Thirdly, we recently purchased this land and built our home here. We gave up the conveniences of city living to have the peacefulness of this property surround us. Had we known that it was a possibility that we would have been giving up the hum of traffic in exchange for the hum of high wire lines, I don't know that we would have made the same decision and investment.

I could also make the same arguments as others about the fallout from the wires and the threats to nature that these lines have. I've researched the information and I'm sorry, I'm more prone to believe that research than the statements made at your informational sessions by people that are financially invested in me believing otherwise. To make a long argument short, I have never been so afraid of something being stolen from me. That feeling of helplessness has caused me a great deal of stress. I've invested a lot of time in researching my options and am looking into donating a portion of our property to the Oneida Nation of which my husband is a tribal member, to be designated as a nature preserve. Either way we lose the land, but at least if we donate it to the tribe, it will be a healthier option.

I beg of you please exclude our route from consideration for this project. I've lived in the UP and still do not understand why they cannot produce their own energy. From what I remember the old Champion Paper Mill is on the Menominee River which is a good location for power, this option would also create many jobs and should be less expensive - it definitely will be less expensive to the Wisconsin residents that are supposed to fund this both financially and through the loss of their property.

Thank you for your consideration in this matter and I look forward to hearing from you.

Shelley Brennan

In discussions with the ATC Communications Director yesterday, we were directed to send in our comments and concerns around the potential construction of a 2nd line running in parallel with the current transmission lines that diverse our property. In talking with her, we noted our concerns with future construction projects on this campus and the impact that a 2nd electrical line might have. Specifically, we will be adding a 22,000 sq ft Medical Office building over the next 12 months. This necessitates by code the expansion of our parking lot to the east of our facility which would place it proximal to County I. Given that, the additional line that would potentially be built in parallel to the current line, would directly traverse this property there by potentially comprising our ability to have adequate stalls to meet zoning requirements. We have tried to look at other alternatives, but given the current location of the Ridgeview Apartments and the Oconto Falls Ambulance garage, this truly remains our exclusive option to allow for the expansion of the parking lot.

I do not want the electrical line on my property. I bought this land so I could farm and hunt. I worked two jobs for 27 years to pay for it. When I cut the dead trees for firewood I am vvery careful not to damage the live trees. Now you want to cut a 150 foot path through my woods and kill everything and never let trees grow again. We have a dairy farm and electrical lines to close to cows reduce production. I have relation that has a transmission line across there land and they said they get shocks off their machinery. The local electrcal coop put a line across my land 3 years ago and I dislike working around the poles very much. So please find a different route

Thank You
Roger Delzer

I got your letter your coming on my property. I only own 1/2 acre. What are you doing, coming through my house?

Whats your problem when you got the woods & open fields go down to A.

I've lived here & paid taxes for 50 years. I've remodled inside & out for my old age. And my daughter lives next to me, & my Grandaughter wants my house after me. I call this my "Heaven on Earth." Now your taking this all away? Where do you have the right to do this without my permission? And your big power lines has strong voltage & bad TV & phone reception. I'll fight this!! You want to give Michigan this power then they better pay for it & Not us! All electric is high enough!

Mad! *PS Id like a personel anser

Donna sent hand written letter in earlier this month. Attended open house to get more info and voice opinion. She has lived their for over 50 years and her daughter lives in the house next door. She wants to be able to leave her house for her grand daughter so they can live next to each other also. She has lproperty value concerns along with health and safety concerns. She wants to be notifed as we move further and to let us know she is opposed to the preliminary route which could effect her property. There is plenty of open fields and woods which we should consider as an option.

Project # A230-2 & A930-1

I would request this service be located on an alternate route. Specifically because my 80 acre property is the only real estate adjoining the city of Oconto Falls, in the town of Oconto Falls boarded on the West & North of this property. There have been extensive surveying and topographical maps undertaken for subdividing into residential lots, with annexation to the City in the future. Any line extension by ATC would not only have significant pecuniary impact on these plans, but also limit use of this property adjoining the Community Hospital lying immediately to the North thereof, impacting any designs they may also have toward expansion.

SIGNIFICANT CONCERN ABOUT LOCATING LINE proximate to our hospital. The first is potential disruption to FUTURE EXPANSION ON THE Hospital CAMPUS to the EAST. Secondly, we have a landing pad for emergency evacuations on these premises and concerns lie with safety issues related thereto.

Subject: Power Lines

Hello

Jerry Fischer from Abrams. I received a letter that our property on County I by Stiles is on a preliminary route. We have a two acre parcel that borders county land. It is only 160-170 wide and around 600 feet long. We are concerned that a power line on or near our land would take away most of the value of the property. I am unable to make the informational meeting because of my work schedule but we are very concerned.

Thank You

Jerry

WE DO NOT WANT ANY MORE POWER LINES ON OUR PROPERTY, OTHER THAN WHAT IS ALREADY THERE. WE ESPECIALLY DO NOT WISH TO HAVE POWER LINES BEHIND OUR HOMESTEAD, OR RUNNING ALONG FULLER LANE. FULLER LANE HAS THE POTENTIAL OF HAVING HOUSES BUILT ON IT, AND POWER LINES WOULD RUIN THAT POSSIBILITY. POWER LINES COULD ALSO HINDER ACCESS TO OUR PROPERTY ON FULLER LANE. WE FEEL THERE ARE OTHER MORE SUITABLE ROUTES FOR THE POWER LINES TO GO THROUGH.

THERE ARE NO FENCE LINES ON OUR PROPERTY AND THE FARMER TO WHOM WE RENT THE LAND WOULD NOT APPRECIATE WORKING AROUND POLES. WE ARE ALSO ACROSS THE STREET FROM THE CITY, AND HAVE THE POTENTIAL FOR CITY DEVELOPMENT.

SEGMENTS AFFECTED ARE C40-2 A920-1 A240-2

Section AU10 We attended your open house Oct 11 and discussed how the remaining preliminary routes would directly affect us. In the route currently identified running west towards Oconto Falls from the substation in Stiles, our house would be in it's path. After our house, there is a 5 mile stretch of woods along an existing line with no other houses to Oconto Falls. An option to run the line behind our property on Richard Caldies land was discussed, but would leave a large portion of land unusable by his heirs. it would be much more expensive to zigzag through multiple properties and render the land useless to the owners than it would be to go straight near the existing line. With that in mind, we would be willing to sell our home as part of your project if the price is fair. We are open to comments, concerns or questions so please feel free to call.

Thank you,

Beth & Rob Gering

The preliminary Route A-230-2 would possibility cause electrical interferences with CM Hospital equipment and therefore should not be considered

Also preliminary route C30-2 should not be considered because ATC already has a more direct route (A240-2) 1/2 mile north that would far fewer home sites and lower property values then C30-2 (County I)

Sincerely

Mike Goodnough

We were really hoping that you guys did not run those power lines down county I. We just bought a lot on the north side of County I for 35,000.00 to build our dream house. Those lines could potentially cut that land in half. If theres a 300 ft stand off we couldn't build our house we would be stuck w/ useless vacant land! County I is so curvy wouldn't it be more costly to run them down that rd. Plus I'd think it would be alot harder to make all those bends in the wire? And More power poles? How come you guys cant run them from the substation by the hospital and thru the county land to the Hwy there are No Houses anywhere there And Its a straight shot??? And already power lines there. Please don't run the lines down Cty I. There are to many houses Thank you/ Cory Graham

Segment G25-2

Although the power lines would not directly be on my property, I have to express my feelings about them being in my "backyard". I was lucky enough to purchase a small piece of land out in the country, away from the big city and all of the noises & issues associated with living in the city. Even though I am not a farmer, I understand that these powerlines will have a very large impact on the unfortunate farmer who owns the land that will have the powerlines going across it. Stray voltage, health issues, no forest land, and reduced crops & less cropland are just a few of the examples. I bought this property for a safe place out in the country to raise a family. I cannot afford to pick up an move if the powerlines come right by my house. Not to mention the decrease in my property value being next to them and the health issues that my family will more than likely have to deal with also. Please put the lines somewhere else! Thank You

Concerning the A920-1 A-240-2 & C-30-2 lines. We do NOT want another high voltage line next to our property or subdivision. ATC doubled the KV A920-1 240-2 just a few yrs ago. We thought that was dangerous enough. now you want to add another 345 KV next to us as well? Why always our neighborhood? We have some concerns if this C-30-2 goes next to us. We will have to move again. There are many children in the subdivision as well. Please don't put any more voltage in our neighborhood and endanger our lives anymore. The existing 138 KV is dangerous enough. There is much cancer in our neighborhood at this time. We suggest putting the line straight north of Morgan to 5 or Hwy 64.

Thank You!

Oct 16, 2012

Concerning A240-2 & A920-1 the currant lines & The proposal of a 345 KV in addition to The ones named above is a scary thought. Please reconsider NOT using the A240-2 as a route to go north. Based on health studies, this amount of EMF's are not SAFE. We have many children living in close proximity to that amt of power. We have enough already, take the line straight north from Morgan.

Thank you

Dave & Mary

I live right on the corner of 141 and LeMere Rd. and my home is very close to 141. So I would appreciate it if the Power Line were not placed on the east side of the hyway. I have my house and other buildings with metal roofs. As well some are made of metal and there is very little space between my buildings and the hyway.

I am very concerned about that much power being that close to them.

Because of the small space and the metal I would be afraid of Stray Voltage if the Lines wer on the East side of 141.

West of 141 on my property P.S. has High Voltage lines already along the railroad tracks.

I rent my farm to a farmer with extremely large equipment. Putting more lines there would really cut into his acreage and cutting my profit in rent. 70' East of 141 is my house with a steel roof and steel machine shed plus 2 silos with 82' tall steel roofs.

East of my buildings there is a creek that runs through my fields. Another creek runs from West of 141 into this creek.

Thank You,

Bill LeMere

Please avoid our buildings & farm land. Go over the pipeland on our property.

Please avoid our farm land - it is being farmed raising crops & considered to be top, excellent farm (ag land in our area. crops are hay, corn, soybeans.

Dont want to see it north of Bacon Rd. or North west or north east of our buildings.

Plan to come to your meeting in Oconto Falls Oct 11.

Would appreciate your consideration of the points above if you have to go across a "40" farmland what is the monetary value for the owner. (farmland vs. woods) 1 time payment or annual payment for yours to come. Please consider other routes & not ag property for 7031 Bacon Rd. Thank you - Jack & Marilyn

According to your map, we are concerned about blockage of our street access, interference with our septic and drain field system, interference with out telephone and television service. When archaeologists did digging in this area of our property before the 4-lane highway was built as proposed, because of their findings, the highway was not built in the area of our property. Why couldn't these lines be installed along or with existing lines? Wouldn't this route be less expensive for you & the users?

I'm not in favor the new project lines running so close to my Dairy farm. What about stray voltage? I've heard of another farm having problems with their calves being born with deformities. I'm also concerned about my quality of milk, if I were to get stray voltage my cattle will show it by having a high somatic cell count in the milk, thus I would be cut in my milk prices, or even dropped if it were to get high enough. I'm also concerned about putting a high voltage line over a gas pipeline. Will I be losing crop land? Again I am not in favor of this line running so close.

I do not like the idea of a large transmission line going between John Duame's property and mine (David P. Truckey) for three reasons.

First of all, it will decrease the value of our property substantially.

Second, all the pines that are between John Duame's property and ours were planted by my father and it's like a legacy from him.

Third, we as a family have sacrificed a lot so that people can have electricity. No one should have to live near three power lines and a substation. It may not be proven, but it can not be healthy for anyone.

I just want to let you know that: Substation Siting D would cause me to lose both my Apartment building and my tavern. My apartment is on the NW corner of Ballard Rd. and Krueger, and my tavern (which I lease out to someone) is on the pie corner of Ballard and Cty Trk EE. I am retired, and these places are both my home (residence), and my income (livelihood). I am 63 years old and would have a very rough time starting over!

Thank you!

We have 38 acres of land we need to have 35 acres to build or rebuild. If you use our land and anything happens to our current house we may not be allowed to rebuild. We also have government paid for 4 acre prairie and 3 wildlife wetland ponds that were put in by the fish & wildlife service. We have a creek running along the entire south & west of our property the creek to the west runs from Hwy B all the way to hwy 54 and beyond. If these power poles run through our property my 12 & 14 year olds will no longer be able to trap shoot on our land. We will no longer have the ability to plant acres of trees the neighbors also have a government sponsored prairie. The power line will interfere with (our friends) small aircraft flying over to visit & take pictures. Our view from the back of our house would be totally ruined if we have to view these power lines 24 7 365 days a year from our sunroom, living room &

(remaining comment was cut off)

the health effects these power lines will have being so close to our house. What will this do to our property value? Our ability to sell our country home with a view of huge power lines. If the power lines are on a pivot point on our property our view from our sunroom (Southside) would be of huge concrete structures & power lines. We would no longer have access to the full acreage we purchased 20 years ago. Most of the proposed Hwy PP Black Creek route is in the Farmland Preservation Program. You need 35 acres to build. Will this affect our ability to sell not having the full 35 acres minimum?

I do not want this line going through our hunting woodlot, you could run the line further north as it is more higher ground which would be more suitable and easier access. If this was to happen I wouldn't have anything left and the land would be worthless. There are other places to run your power lines. North along Ballard to Hiway 54 then west.

Referring to Segment M 250-1. This property is part of the watershed (head waters) of the Duck Creek natural waterway. This Duck Creek waterway Flow through the Oneida Tribe Reservation along with other properties to the south and east of Segment M-250-1 It was mentioned that the Oneida Reservation Tribal Lands which is approximately 5 miles east cannot be touched because of tribal rules and they probably wont appreciate that the head waters be touched either, because of the water filtration that happens through nature in the marshy - swamp areas tha purifies the water ecosystem that flows through their tribal land. I believe there are alternate routes that could be taken to the east and go north. Also it would split our recreational land in half and have a serious impact on value. Thank You.

Referring to Segment C176-1 T2 with a proposed transmisson line being constructed on Cty PP in the town of Black Creek, I wish such proposed line being constructed it would go in front of my property. My house sits 100' off of the road and with your ease ment that is scheduled to go along or in such property it would remove all of the trees in front of my house included with some white pine trees that are about 100 years old and I wouldn't have anything left and it would severely reduce my property value. It is just a small parcel of 4 acres. It would be appreciated if another route could be considered. Thank You

Request that you use another alternate route for your power lines. You already have one established on Hwy 47 & near CTY RD "S". My land has been in my family for 5 generations it is farmland. I have a concern for bio-security when unfamiliar vehicles are going to enter & exit it. (You would have to incorporate at the minimum a rumble strip/area & a wash station prior to entering & exiting space.) I have eagles & vultures nesting in the woods as w/ varois hawks. DNR had been tracking a bear in the area not to mention we are very near Falling Timbers which has released Timber rattlers & wolves, basically we have a few endangered species on our land. I also believe our land is part of the Duck Creek Water shelter. My land is farm land exclusive, every bit of it is used either for grazing or for crops. I do not want this line through my land. I recommend going through falling timbers (since we are (the public) all ready, paying the taxes or using the old railroad/walking trail if the one on 47 & S is not available. one could also go through stington Rd as an option. Pls provide updates via mail on status - (signed)

I AM NOT REAL HAPPY ABOUT CONSTRUCTION OF ANY KIND IN MY FARM COMMUNITY. Rural life is the backbone of Wisconsin and the norm for rural living. I HAVE NOT HAD THE OPEN schedule to VISIT A meeting site and would like to know IF THIS suggested power line is in the air, i.e. metal towers or under ground, i.e. cable. Also, I would like to know if this suggested line is VIA EASEMENT OR ACROSS PRIVATE LAND. Any information would be nice as I am unavailable to meet at a specific location.

Thank for you time.

Your proposed route through my property would make my property worthless! My land is unbuildable wetlands, good for only hunting and timber. You want to cut down most of the trees, so their will be no timber. With the trees gone, no cover for the deer which means no hunting. I hope you plan on buying my property because it will be of no use to me. The value of my land with your power lines running through the midde of it will be near zero

Bay Lake Project
American Transmission Company
2 Fen Oak Court
Madison, WI 53791-8614

Dear Sir:

Thank you for keeping me updated on the BAY LAKE PROJECT. I would really dislike the idea of losing my trees and having a power line come in this area.

I as a child helped to clear this land which I live on. In 1970 we purchased this land from my father and mother. We have planted many trees they have grown to be something to be proud of. My husband is decased put I truly am happy to see the deer and turkey families grow. This is truly my part of Heaven.

If you have another transmission line you could add to, I would think would be the idiel answer.

Sincerely,
(signed)

I first have to give you credit on keeping this secret for so long. I would have never heard about this project unless my 75 yr old Mother had not shown me the bulk mailing you sent out to land owners in the affected Marinette CO. I find it very interesting that she received this very uninformative mailer considering she owned less than 5 acres in Athelstane and sold it 7 years ago while I did not receive one and own 120 acres in 2 plots on eagle rd and parkway. The maps you include are ridiculous. There are not even major roads marked nor are the major waterways, High Falls, Cauldron, Johnson to mention a few. This is your first misleading mistake. Your second is that if you had done any due diligence you would have known that a lot of the affected land is owned by no local people as weekend/vacation homes. You set up your ¿public¿ meetings during the week when most landowners are not available.

I have BCC several local blogs that will be very interested in your response

I understand that this project will help service for a lot of people, But I just plain dont want it in my front yard or back yard. I am asking that you consider routes through public forester such as falling timbers or down the hiking - Biking - horse trail (old rail road tracks) etc. Instead of in our front and back yards.

I built my house from the ground up and I will do anything, I possibley can too help over head lines out of my back & front yard.

Segment M250-1

Farm are a restricted area to prevent spread of diseases! Only farm personnel are allowed their to maintain herd health & prevent spread of diseases!

We are not interest in selling any land or easements for your project. You should of Bought land years ago for your project when it came available. This Land is 5th generation farm. We have no land to spare as all is needed for Raising Feed & Grazing. It is all zoned Ag Exclusive. As you know powerlines are not Ag Exclusive. All trees are needed for shade for Livestock. On this route there is one of the oldest cottonwoods in WI. The University of WI comes out & monitors it & others on the property for their studies. There is also alot of wildlife that would be disturbed by your Lines & workers. We have Hawks, eagles, Buzzards, Deer, Turkey, pheasant, etc that could be damaged/injured by your power lines. We do not need your workers spreading germs, diseases, or leaving stuff behind that would injure cattle or cause biosecurity risk. If cattle ingest metal pieces they will likey Die!! Your workers will be at Risk of getting injured around cattle/Bulls/Horses. Four wheelers will attract them like Flies on Shit. If you use helicopters near the cattle, which will likely cause them to go thru their fence. You Better Be Prepared to chase them R pay for property damage cattle Do & Damage to cattle. I Do Not need your employees touching, Harassing, Chasing cattle or Leaving Fences open. This route also has alot of New Houses that Don't want to be living near or have to look at your powerlines. People move to the country to get away from shit like that. We Already have a big ugly tower on this route. Our land in NOT for Sale Nor is an easement!!

I suggest You Build it on your own land or your employees.

I attended the 2nd meeting in Green Bay, WI. Our Land is situated on both sides of Kropp Rd., in Black Creek, WI. I spoke to numerous ATC representatives at the meeting and received mainly generic, nonspecific (ie useless) answers to my questions. Both Sides of the road are used for pasture and/or Hay production. We have a herd of registered Holsteins and registered polled Herefords using these pastures and consuming that hay. We also have a group of high quality registered horses grazing there. My youngest colt has 8 (TOTAL 16) World grand Champions on both sides of his pedigree - he is intended to be the new herd sire as well as at stud to outside mares. How can I possibly trust strangers around my livestock? If your people put in a gate & leave it unsecured, how will you handle damages to my animals from your people, your equipment, the loss of my animals should you let them out onto the roadway? How will you handle damages or loss of life should a car hit the cattle or horses? If you spray for brush will it kill or damage my animals? If you mow, how will you compensate for the lost grazing? Your website claims the lines won't cause brain cancer, but how accurate is that since cell phones are again accused of being carcinogenic? Surely the electromagnetic field of these lines will be much greater. Will this make my animals sterile? - We do run a bull with our cattle - certainly anyone enters the pastures at their own risk. as do we.

I'm concerned I will lose my AM Radio reception from Milwaukee, Appleton and Green Bay. I hear buzzing when traveling in my car along powerlines and don't want this when i'm home listening to the radio. We are listeners of AM radio much more than FM radio stations.

My residence is in one of your proposed preliminary routes. I do understand the need for reliable power but I am opposed to destroying our rural culture unnecessarily. Based on the information presented it appears another option you have identified is that of an existing corridor several miles east of my property. It only seems reasonable that you would take advantage of this corridor since it is already established and maintained. This option sounds cost effective and I would hope common sense would prevail.

We are opposed to a power line near our home. At some point we will want to sell this property and a power line in close proximity will seriously devalue it.

I am a farmer who has more value for farm land then running power lines across my land or a sub station on it. I will not sell my land for that reason. I certainly Don't want power lines next to my buildings on any where near them I suggest you look for other places away from people and cattle and valuable farm land.

Subject: Project area 1 - Proposed Substation Siting Area D

WE DO NOT WANT THE PROPOSED SUBSTATION ON THIS SITE.

I am a family member of property owners Carl, Andrew, and William Herman, N5412 Mullen Rd, Seymour, WI 54165. My parents spent their life providing and building this farm to support a family of 11 children. When my father passed away my three youngest brothers purchased the family farm. Making many improvements and modernization's to the farm over the past few years and having many more years of productivity ahead of them, their lively-hood may not be possible if the proposed substation proceeds. This proposed substation will take half of their land base and put the farm and cattle at risk. Without the land for feed the farm will not be able to be a productive business. My husband and I also work with my brothers raising there calves, building the substation here may endanger our well being if we are unable to keep their business. Another concern is a neighbor to this property has a small airplane and air strip on his property. There has to be a better alternative then sacrificing productive farm land and family productivity to this proposed substation.

On another note when my husband and my brother went to the open house in Green Bay, they had a chance to talk to Ken Jeanquart, they expressed to him my concern of how notification was handled to the land owners. My mother still lives on the farm and her name appeared on the letters from ATC, (Nora Herman) she was stressed seeing the information that looked as if a good part of the farm was going to be taken away. It may have been beneficial if more direct contact early in this process could have been made to inform land owners especially regarding the substation siting areas.

If you have any questions please contact me at our e-mail address of rustichavenent@gmail.com

Why do you now want to put powerlines on our county highway when our power lines were all put underground with our phone lines many years ago. This seems so ridiculous after all the effort to burry all the lines. Before the lines were buried we had nothing but problems with outages and Blown transformers. Since they were buried we haven't had very many episodes. Before they were buried every time we had any lightening we were without power. It got to a point where when I called in I could tell them exactly where the problem would be found. We also now have many more homes along this road. What will this transmission line do to our property values? I am a widow and live on a fixed income and the last thing I need is for my property value to go in the tank. Thank you.

I had car problems the day you were in Green Bay so couldn't get there in person.

BAY LAKE PROJECT

I was informed by mail and have attended one of the informational meetings regarding the Bay Lake Project. I live in a

subdivision on the north east corner of Hwy sand Meade street. I do not want the line to go anywhere near my

property. I live in a subdivision and do not believe a power transmission line would be a good idea to run through a

populated area. I do not want it to affect me or my children. Please use a different route.

Thank you in advance,

Jeff Calaway

I was told at the informational meeting that I should contact you and inform you that (in no way shape or form) I do not

want a power transmission line on or near my property. I live in a

subdivision on the north east corner of Meade Street and HWY S in the town of Center. I was told that it was unlikely to

be coming to my area because I am in the very south side of the project area but I want to make sure my opinion is

known. I DO NOT WANT IT NEAR MY PROPERTY!

We are a 4th generation dairy farm. We spent quite a bit of money dealing with stray voltage. Please, please, please don't put the transmission line near our home and farm.

There is a small subdivision North of us & another one to the West. I would think you'd want to keep the power lines away from developed areas.

Please include us in future mailings - but we really hope our corner of Section 8 isn't "picked".

Please don't construct your new Power transmission line along County Rd. PP. We've already lost woods right behind our back lawn when they decided the Duck Creek Drainage ditch needed to be cleaned and a 20' area had to be left.

We understand there is an existing transmission line approx 3 miles east. Please utilize this route instead of disturbing our rural area. We would think this would also be cheaper for you because you already have the other route established and have the maintenance costs to maintain it.

AREA MARKER C70-1

WE ARE CONCERNED ABOUT POTENTIAL 345KV TRANSMISSION LINE WITHIN 1/4 MILE FOR:

- 1) INDUCED VOLTAGE IN LIVING SPACE FROM ENERGIZED FIELD AROUND CONDUCTORS;
- 2) ELECTROMAGNETIC FIELDS IN OUR LIVING SPACE AND YARD;
- 3) DISRUPTION OF LOCAL OVER-THE-AIR RECEPTION OF TV & RADIO (CAN'T AFFORD CABLE CONNECTION FEES).

THE SOUTH-WEST AREA OF POTENTIAL COORIDORS HAS PACKETS OF RESIDENTIAL DEVELOPMENTS NEAR ROADS, AND AGRICULTURAL LAND BETWEEN ROADS. IT WOULD SEEM THAT THE BEST SIGHTING OF TRANSMISSION CORRIDOR WOULD BE THROUGH NON-LIVING SPACE IN AGRICULTURAL LAND, AND AVOID BEING NEAR HOUSING WHEN POSSIBLE. FUTURE BUILDING NEAR TRANSMISSION LINES COULD DESIGN TO GROUND METAL BUILDING MATERIALS. VOLTAGE INDUCTION IN TOOLS & EQUIPMENT IN OUR SHOP COULD BE A NUISANCE.

We own four acres and next to it 40 plus ace's owend in thirds with my wife's brother Ron Drew's who lives on the property and sister Jean Theil. This land is planed to be sold as our retirement. We plan to sell it as a subdivision, as you know power line's through it would lower the value of the land and make it almost impossible to sell as a subdivision. Just a litel way down the road we had around 200 acres sell for \$15,000 per acre, we would be intrested in talking about selling the whole property not just an easement for \$15,000 per acre. Health is also a concern, it is better living farther away instead of closer to transmission lines, we have a house south on EE thats built under H-structure's and has been sold more than six times in 20 years, why? Have friends who live close to power lines and have a constant buzzing noise. I'll bet none of you, ATC employee's first choice would be to live next to that. The \$15,000 per acre price would give us a choice or opportunity to move. This letter is not to be reprinted or distributed without written permission from Daniel or Julie Kiecker

Area on map M180-1

We recently built a new home on 5 of our 76 acres and don't want our value to drop. Lot & house value \$850,000.00. We purchased this farm because no power lines, railroad etc were near us. We own a remaining 66 acres fronting Center Valley Rd. We also sold a 7.2 acre parcel for \$120,000 last year and don't want them affected either. On our remaining 66 acres here the 3 lots we would develop have value at 200,000.00 / 350,000 / and 200,000.00. This power line would have adverse affects on value as well as health concerns. Does the power company pay for damages?? We definitely don't want this in our front or back yard.

Our land is in segment C855-1

We have a small, 30 acre farmette along Cty Hwy VV. Currently we market garden and have plans to expand to include a CSA. We cannot afford to lose ANY tillable land! We are also concerned with stray voltage affecting our livestock.

We hope you can find a more suitable route for your transmission line.

Thank-you.

Dear Mr. Hovde,

I have forwarded a message to you that is a response to an inquiry I sent to the NRCS regarding ATC's potential plans to put transmission lines across our property, including a portion we enrolled in CREP this spring. We just seeded this land according to the prescribed practice in November. We certainly don't want transmission lines to destroy all of our plans, hard work, and expense! This land will provide a filter strip for my neighbor's wetlands, to which it is adjacent. I look forward to meeting you at the Town of Cicero Board meeting tomorrow night.

Sincerely, Deborah Boettcher

P.S. Our property is located between Hoefs Rd. and Jeske Rd., across from our house at W4185 Hoefs Rd., Seymour, WI, Town of Cicero

Hi Debbie,

Pat forwarded me your email with the questions about what would happen if the land that is in CREP would be part of the Bay Lake Project being done by the American Transmission Company (ATC). Any portion of CREP that would be part of the project (such as poles) would have to be removed from the CREP program and liquidated damages would need to be paid and also any Signing Incentives, Practice Incentives, Annual Rental Payment and any cost shares paid plus interest that would accrue from the date of issue of the payments. Depending on the timeframe for the work to be done there may be further implications.

Permission would also need to be requested in writing from the Outagamie County Committee for any work that would be done on the CREP.

Please contact me at (920)733-1575, Ext. 112 when you have found out the areas of your property that would be in this route area and also if you have any further questions.

Thank you,

Jodie Groeschel

Subject: Fwd: MFL property

Dear Mr. Hovde,

I am forwarding this response to an inquiry I made to the DNR regarding ATC's potential plans for including our woodland in their corridor for transmission lines. Obviously, we are very opposed to destroying our 15 acre woodlot by intersecting it with transmission lines. This would destroy valuable hardwoods with rare understory plants and wildflowers including trillium and ladyslipper. This woods also contains several vernal ponds that are home to salamanders, and several species of frogs and toads. We enjoy our woods for hiking, cross-country skiing, horseback riding, observing wildlife, and hunting. My son, who became a paraplegic 3 years ago after an ATV accident, is able to hunt on this land fairly independently, due to our close proximity, as both our homes are located within and adjacent to the woods. I implore ATC not to go through or near our woods!

I understand that you are going to be at the Town of Cicero Board meeting this Thursday, at 7:30 p.m. I look forward to seeing you there.

Sincerely, Deborah Boettcher

P.S. Our land is located at W4185 Hoefs Rd., Seymour, WI, in the Town of Cicero.

To: Debbie Boettcher <dlb119@gmail.com>

This has happened on other properties in MFL. Usually it happened before people put their land into the program so the acreage was included as non-productive.

In your case, I would hope they have put the line over a farm field where it could still be utilized to grow corn or soybeans rather than putting it through a high-quality woodlot.

Frank

Subject: MFL property

Hi, Frank! Hope you had a good summer. I'm just writing to inform you that we got a letter from the American Transmission Company yesterday, informing us that property we own is on a preliminary route for their Bay Lake Project, a collection of power lines and substations proposed to improve electric reliability in Upper Michigan and NE Wisconsin. We first heard from them in the spring, when there were many more potential corridors being considered, but many of those are no longer under active consideration. Unfortunately, our land is among those they have narrowed down. Do you know anything about this, and how it would affect our MFL plans? Has this type of thing happened with other properties that you're aware of, and if so, what was the outcome? I would appreciate any insight you can provide. Their goal is to have it completed in 2015. Bill Brooks' land is also included in the preliminary route identified in our area.

Thanks, Debbie

Comments:

Two years ago we just had our 15 acres of woods enrolled in the MFL program. This summer we just had 5 acres of our farmland enrolled in CREP, to be planted in grasses and forbs this fall. If our property ends up being on your route, how will the project affect our involvement in these programs, of which we have invested a significant amount of time and expense? What are the possible tax implications? What about environmental impact?

Comments:

We are extremely upset that our property is on one of your "possible corridors". We have acquired our acreage, one parcel at a time over 26 years as opportunities arose. We have been careful stewards of our land - enrolling the woods in Managed Forest Land, and just this year, 5 acres in CREP. We just planted 9 acres in prairie seed on Nov. 14. My husband planted trees and made a koi pond on the acre across the road from our house. We have spent much money, time, and sweat nourishing our land, making it sustainable for wildlife and outdoor recreation. Our woods is now the only place our son can hunt after an ATV accident he had 3 years ago that left him paralyzed. We love nature, and are environmentalists. Preserving nature and wildlife is our first priority with our property. We belong to many environmental organizations, including Wisconsin Woodland Owners, Nature Conservancy, Sierra Club, Audubon Society, and the Environmental Defense Fund. We vehemently OPPOSE putting your transmission lines on or near our property! It's a shame that you are upsetting so many people. It would have been nicer to wait until you have it narrowed down to the two routes you plan on submitting to regulators. I am worried and upset everytime I see planes flying over our property, which has been a lot lately. Please do not ruin any more land and wildlife habitat with your power lines. Please put them along already existing corridors, where there already are power lines, or along highways that are already corridors. It makes no sense for you to come so far west, just to go north and back east again, to go to Michigan! Sincerely, Kurt and Debbie Boettcher

There are several issues that are problematic:

- 1) Having people on the ground talking to individuals potentially involved in the project would have been beneficial.
 - 2) Transparency in who is funding the project and environmental impact studies. If this project becomes privatized who gets the money? Are there any governmental checks and balances to assure the protection of citizens impacted?
 - 3) Finally, you need to be sensitive to the racial overtones this is provoking with the Native American communities. There is not a clear understanding of Native American rights and they could potentially put them at risk.

Comments:

Our farm in segment c855-1 (Gotham Trust) is in the business of growing trees, both hard wood and soft woods. These woods are in a Managed Forest Land (MFL) contract. Unlike corn which is a single year crop, trees are a multiple year, 20-100 yr, crop. They have been actively worked on each year in order to produce a better and larger crop in the future. This involves mowing between the rows, spraying for weed control, pruning the individuql trees, etc. The value of these trees may increase each year, but the big payback is way in the future. Also, our house is right on the edge of the road right-of-way of VV.

My wife and I farm 120 acres in your proposed site. We had highlines running through our property and had alot of trouble with stray voltage. We lost cattle and production.

We had neighbors that lost a daughter to brain cancer, a brother in-law that died of brain cancer, my wife had tumors on her ovaries and had to have surgery. There was a substation down the roud from us. This and the highlines were removed recently.

This will also drop property values. This property is all we have for retirement.

WE DO NOT WANT THIS.

We own 40 acres of wetlands appr. 2 miles east of Hwy 47 along Hwy G. This land is used primarily for deer hunting. In fact the Black Creek runs through our property (Outagamie Co.).

I have some concerns regarding placement of power poles, starting date of project & how it will effect the 9 day deer hunting season.

Is there any type of compensation if project goes through property or adjacent to it?

Enjoyed the May 14th information seminer in Green Bay I'm still concerned about land value if a sub station is allowed on my property, in Cecero, I'm in the Farm Land Preservation program since 1982. I know it is going to be several years before completion of the project and would like to keep it in the Farm Program as long as possible.

Thank You

Subject: Concerns about Proposed Transmission Line

To Whom It May Concern:

I wish to state my objection to the proposed transmission line (Segment C595-1) being routed past my house located at W4736 Cty Road G, Black Creek, WI 54106.

My house is only 200 feet from the road, so if two power poles are set side by side in my yard, it will take up most of my front yard, which would seriously affect my property value.

I am also concerned about possible ill health effects from the power line. And, since I live on top of a hill, I am afraid that vibrations from wind on the wires will be constant.

We lost land to the highway passing land 2 years ago and would like to be able to keep the rest of what we have. Our land is long and narrow, the power lines would take much of that away. The land is also marsh or wet land.

If the lines are going north from the Seymour area, why would you run the west, then north, then back to the east again? Sounds like alot of extra money and work.

Town of Cicero Position Statement

Topic: Highline Power Distribution

Whereas the Town of Cicero already haexisting power line distribution corridors,it is the Townships' position that before any additional land and infringement upon township residents and businesses for purposes of power distribution corridors/ the following criteria be met:

- 1) Additional distribution is contained within existing corridors until snld corridors are utilized to 100% capacity. Changes including line additions, structure changes to hold power lines nre considered acceptable, providing there is proof of need to support the changes.
- 2) Town of Cicero rejects additions to land right-of-way, extensions, or added corridor space until such time that proof of need ls provided by means of a comprehensive report or equivalent supporting such necessity before any consideration, approval, or recommendation by Town of Cicero board members. Any and all informn<Jtion regarding proof of need shall be provided to Town of Cicero residents and businesse, followed by a town hall discussion, motion for approval and board approval.

Without the above criteria, it is the Town of Cicero's position to strongly reject the ATC "Bay Lake Proposal" as proposed. Clearly ATC has n'ot provided sufficient proof of need, nor has ATC addressed changes to capacity of current corridors, but has ln fact aggressively attacked the land use by proposing additional corridors to be added next to existing corridors currently ln use at minimnl capacity. Town of Cicero believes the ATC "Baylakeproject" approach is profit driven with disregard to a "least intrusive" approach which will only degrade Town of Cicero as a whole by permanently diminishing property values, countryside aesthetics and overall quality of life.

As stated by David Hovde, ATC local relations representative ln a Town of Cicero meeting: "all proposed additional current tlow lines could be constructed within the corridor currently in use, however, we have no intentions of doing so"; Town of Cicero strongly disagrees.

Hi

This is in regards to project by Bay Lakes to put transmission lines thru our property in Segment C855-1.

I have made copies of our contract with the DNR that put our East 20 acres into Managed Forest Land in January 2006. I have high lighted parts I feel are important. It is important to keep our animal habitat and save our trees.

I will also send copies of contract of Managed Forest land put in 1992 this is the West parcel.

Thank You

Gary & Cathy Westerman

P.S.

Please give us a chance as lots of time & money have been put in to save wild life.

Thank you for your quick response.

I have spent time on your interactive site prior to contacting you. I asked you in my last e-mail why these lines are coming through this area violating precious farmland and homesteads. You deflected that question. So I ask again, why are these lines potentially coming through this area? There are more direct routes. Why not follow Hwy 41/141 and avoid disturbing valuable farmland and small communities?

Thank you,

Janet

To: Hovde, David

Subject: Re: Bay Lake Project

My intentions were not to just push these lines into someone elses' neighborhood.

I agree that e-mail isn't the best form of communication, but with your busy schedule and my busy schedule, this is the most effective way to get questions answered.

My questioning and concern is due to the fact that there are twenty numbered lines in my township. We are a small community consisting of family farms and the preservation of these farms is my main concern.

The natural challenges we face on a daily basis while farming don't need to be compounded by man-made obstacles.

I strongly urge you to reconsider bringing these lines through this area. I do not believe that there is an "easy fix" as you say. I do however, believe that there is an answer that will be beneficial to everyone involved. I feel that we already depend on foreign imports too much and by compromising these farms and dissecting cropland we increase that dependency.

I appreciate your response to my question.

We will be unable to attend the informational meeting, however I would like to voice my concern regarding this project. We already have high power lines going across my property & don't feel we should be subject to more. If a substation is put near our home, I feel our property value would decrease in addition to what it has already. Please consider placing these lines along highway corridors. Also substation could be placed near towns.

Enclosed letter and map of natural gas pipeline route

10/20/12

At your oct 9 get together in Green Bay, I was surprised that you didn't show the natural gas line built 3 or 4 years ago just outside the Onieda township/reservation was not shown on your maps, infact your reps were not aware of this pipeline. You have a line/right of way from North Appleton substation to proposed sub "B" and from there to the pipeline is as little as 2 miles north. This route would avoid all subdivisions and more populated areas. The pipeline is said to go to Pulaski and/or Pittsfield area. This would also be the most direct route to Morgan. Please consider it as the path of least resistance and the shortest.

Just wanted to note significant concern relative to potential placement of sub station A.

I am not sure that placing a substation next to a 40 home sub-division is in the best interest of all involved. While I appreciate the needs of ATC - The local neighborhood is organizing to stop the position in freedom. Legal action against the placement as well as legal action to stop the purchase of the land are discussion points!

Freedom is already home to a substation - Please move to Spot 2 or 3

Subject: Power Line Route (Section 1S1A)

Dear Public Service Commission,

My name is Mike Coenen. I'm writing to you as we have concerns over a proposed transmission line route for the Bay Lakes project. Specifically route 1S1A, in the A480-1 corridor. My wife Nancy and I are property owners located on this route. After studying the options, it becomes very clear that option 1S2A would affect significantly less people and properties. We're voicing our opposition to route 1S1A.

We chose this lot 8 years ago to be away from the cities and towns and out in the country. We built this home ourselves. I do not want any power lines or towers or big structures obstructing our view or giving off harmful effects. This will decrease our property value and ruin any chance of selling our home and getting any type of money out of it. We have young children and do not want them to be anywhere around something like this. There are numerous harmful effects that can be caused due to this structure and also risk of the structures causing physical injury.

We have the right to complain when the power lines in Freedom will run directly through our subdivision, right through our property and a huge substation will be built next to us. If we don't lose our homes we will be subjected to radiation from the substation and our homes will be virtually worthless. Equally as bad, the only notice we were sent in the mail was disguised as junk mail. It's hard to voice our opinions when most of those effected aren't even made aware of what is happening. This doesn't even benefit our area and yet they want to expose us to more EMF's which can cause cancer, not to mention decrease our property values and give us these terrible substations to look at... This would be terrible for Freedom.

I have my property for sale and need to know if the power lines are coming through my property. It's hard to sell houses now!! The property has one line on it now and if another goes through it will be impossible. I also need to know for disclosure during the sale. Please inform me as soon as possible. Weekly, bi-monthly or monthly.

Subject: Bay Lake Project

Mr. Hovde,

I am writing you because we missed the meeting in May. I went to the web site and didn't find the video in

reference on the post card sent to us titled 'sorry we missed you!' I also call the telephone number 855-831-5853

and left a message to return my call and have not had a response.

So our concerns are, how are we affected in the Bay Lake Project and to what capacity. How will the value of

our property after the project be affected and what health quality can be reduced by the power lines. When we

first moved to our property we search hard and long to be away from these types of power lines and now have great concerns of these power lines entering our property with great dismay.

Our phone number is 920-954-6001, address W3465 Krueger Road Freedom, WI. We hope to hear from you

soon. Please address the concerns and update us with more information on the Bay Lake Project.

Subject: Against route 1S1A !!!!!

To the Wisconsin Service Commission and to Mr. Hovde:

Hello, my name is Corby Henkel. I own lot 31 on Panoramic Avenue in Scenic View Estates in Freedom, WI. I have two children under the age of 4. My family and I planned on building a house there this spring, until we heard about your plans of adding a 345 kV transmission line through the subdivision. I am vehemently opposed to this. I detest this idea, as there are 14 houses already built with 28 children living in these homes. This is a quiet and peaceful subdivision, with no fear of EMF or noise from transmission lines. These children deserve to be able to play outside and ride their bicycles under the lines already there (138kV), not high voltage 345kV lines that everyone is worried about. Not to mention the economic impact this would have on everyone who has saved their entire lives to build these houses. I DO NOT SUPPORT RUNNING A 345kV LINE THROUGH OUR SUBDIVISION!!!! There has to be a better alternative such as farm fields nearby.

I DO NOT WANT 345kV LINES RUNNING ON ROUTE 1S1A !!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Hello, I am Corby Henkel. I own lot 31 in Scenic View Estates in Freedom, WI. I am very much against route 1S1A. There is no way that you, in good conscience, could put an ultra high voltage line through that subdivision. There are too many people, especially children, who would be exposed. There has to be a way that you can go around and up. The children deserve better. Not to mention what it would do to property values. These are honest and hard working people who have worked hard to build these houses. I AM AGAINST ROUTE 1S1A !!!!!!!!!!!

Subject: NO to line 1S1A

To the PSCW:

Our names are Corby and Kelly Henkel. We own lot 31 in Scenic View Estates in Freedom WI. We are vehemently opposed to line 1S1A. The number of homes this line impacts vs the other route is huge. The alternate line is all farm field and it already has a 345kV line on it. 1S1A would go through two subdivisions, who's smaller parcels would be impacted greatly compared to farm field. This would have a much greater impact on the residents of line 1S1A than on the alternate route. There is no reason why this route should be picked compared to the other route. If you truly care about the best interest of the citizens of Wisconsin, you will decide the other route. NO TO LINE 1S1A.

To the PSCW:

My name is Corby Henkel. My family and I own lot 31 in Scenic View Estates. We are soon going to be building a house. I want to stress the importance of these lines impacting people's lives. There are no subdivisions on route 1S2A. There are two subdivisions on route 1S1A. Even though the numbers by ATC don't reflect the possible number of homes there are within 300 or 700 feet of the right of way, there will be many more homes on route 1S1A to come. Route 1S2A in the long run will affect FAR LESS PEOPLE than route 1S1A. There will eventually be 36 homes in our subdivision, many with small children already. Everyone in this subdivison will need to go directly underneath these lines EVERY SINGLE DAY!!!! NO TO ROUTE 1S1A.

I went to the last open house for the high line project. I was told by law, ATC needs to show two routes for the lines. It is very clear that route 1S1A will impact a great many houses and people, while route 1S2A will impact very few people.

Even though the lines don't run through our land, they are next to us, which destroys our beautiful (Vacation spot) View. We have spent years worth of time, and a lot of money to make this property look like Northern WI. For 20 years we have been planting hundreds of trees dug out from northern WI and replanting them here. We also dug a pond to give the up north lake appeal. We also put in a large fire pit area and a sand beach all to give us a vacation like view. All this grand view and hard work will be destroyed if these large high lines go through. So please run the line on a differnt route. Thank you.

Comments:

I was unable to attend any of the open houses; however, I would like to make a few comments based on your virtual open house, which I'm sure you've already heard. 1. Property Value: While you state many factors affect property values and the presence of a high power line is one of those factors, I don't see any situation where the presence of these power lines would cause property values to INCREASE. This means the best case scenario is property values will not change. A more likely scenario is property values will decrease because of power lines being present. (How much would certainly be determined by other factors) 2. Health concerns: Again there is no definitive scientific study that high power lines have an adverse effect on the health of animals or humans; however, there is no study I'm aware of that points to high power lines IMPROVING one's health. Best case scenario; therefore, is power lines will have no adverse effect on health. For these 2 reasons, I am opposed, as most property owners, to having power lines on or near my property.

To whom it may concern:

I am writing to inform you of my concern to install a high voltage power line along the 1S1A route. This new installation if installed on the west side of the existing power line will have negative effect to the land value of my residence. I am also writing to my congressional representatives voicing my concern for this new power line to be installed on this route.

Respectfully concerned residence

My husband and I have one main goal and that is to save our 5 acre farmette. We hope you will look into alternate routes that will not condemn peoples homes & disrupt lives. Even if a portion of our land and buildings would be taken than the entire value would decrease. This is a big portion of our retirement since it is paid for and we are now in our early 50's. The thought of having to start over is just too much. We see alot of open fields with the power lines over top and pray you will be able to find a solution to this so everyone is happy. Please send me updates to the e-mail I have listed. We hate to do more improvements her until we know more. Thank you

Please do not use Route K37 It runs directly through our land, pasture & up to our new sheds - & horse stalls. It would ruin our horse Ranch & cut the value way down. I do not want to Loose my home & animals. I beg you to Look at alternate routes that would not affect So many homes. I am sure you get 1,000's of request like this. I Pray we do not Loose everything we have worked for. For once in my Life I do not want spring to arrive for fear of bad news. I don't know where else we could go. This is all I can think about when I am outside.

10-2012

My wife and I own the property known as A180-1. As indicated on the map of our property; a 138kV power line runs diagonally through our lot.

We have owned the property for approx. 6 years now and enjoy the secluded country setting we had. Late in the Fall of 2010; we were notified by ATC that the vegetation under the power lines had to be removed within a time line.

In our case that meant the removal of (45) 10' evergreen trees that were there probably since the time of or shortly after the farm land was sold as residential property.

If you (ATC) decides to use the route that run through our property (K-37); another set of "H" poles will be erected. If the poles are installed to the northwest; approx. another 50 evergreen trees that are now 12' in height plus would need to be. removed. These trees not only border our property, but also serve as a wind breaker for us and our horses as well as privacy.

If you go to the north of the poles; our barn, shed and possibly our house are in endanger. The other concern with going northwest of the existing poles is our neighbors house. (Tim & Peg Lehrer)

We hope that as your final choices; you (ATC) really consider the other alternatives. The routes we propose are, the area west of the Richard Femal property (A480-1) seems like a clear shot running north. The other route, is just south of us (A180-1) which is a 345kV existing line with area to expand.

We appreciate any consideration of our request, for we love our property and the setup for not only us but for our animals.

We would appreciate it if effort was made to make substation area on French Rd more visually appealing. trees, bush, berm. Also, it does get quite loud, and we are aware there are transformers that decrease the noise. We would appreciate that every effort is made to make this less awful to live by. My home is my life savings, and the value of my home drops as more is added to the site and it becomes louder & more visually unappealing. We would be much less adverse to have this here if effort was made to make it look & sound less obtrusive.

Subject: Freedom substation

I am a landowner living on Hilly Haven Dr. It is a small subdivision near the site on French Road. I did not receive any notice about this most recent informational meeting on May 9th as I had via mail for the last meetings. Our last name is Landsverk and the address is W3194 Hilly Haven Dr. Freedom, WI 54913. I would like to receive any information about upcoming meetings. For my work I drive around wisconsin each day. I have seen other substations that have actually had some landscaping: berms around the area, lots of trees, and other landscaping to improve the aesthetics of the sites. Our current site is an eyesore. Trees are frequently cut down. There appears to be no concern over what the site looks like to the community. I understanding that I have no choice in the fact that you are expanding the site, but I will expect that there be a plan to improve the noise from the site as well as improve the aesthetics. I will be working with the town and people directly affected by this site I have my life savings in my home, as do many others. By the lack of concern for the aesthetics, you are decreasing the property values even more. I would appreciate any updates on the plans for the landscaping and improvements in managing noise from this site. my email is jenverk@gmail.com.

Please consider adding new line south of Garden Estates Subdivision. Current line A950-1 (?) @ North edge in narrow corridow w/house on all sides. South side of subdivision is all farmland to Cty UU. Land would be "Brockman" and "Lerrand Dairy, LLP" on map.

Subject: Bay lake transmission line project

Hello,

My name is Waylon Melchert, I'm part owner of M&V Development which owns Scenic View Estates. This subdivision is a long the 1S1A route. About a 6 months ago we had a larger lot that some singed on and before closing. They had WE Energies come and test the voltage off the small lines that are there. They decided to back out comparing the amount of stray voltage to a chart that was given to them. Wow, If we cant sell a lot that is next to power lines now. How are we going to with a larger set of lines? Most all the lots that are left in our subdivision are next to the power lines. I would most likely go bankrupt if the larger lines were to go threw our subdivision. It has been a hard and long last 4 years how shitty the economy has been. Please find a alternate route!

I also did build my dream house with a shop in this subdivision about 250 ft from the power lines. I hear them hum sometimes on quite days. I think it would be a newsence and eye sore to have any bigger power lines replace these lines.

I'm begging you guys to find alternate route!

Any questions please call (920) 470-4019.

Thanks!

Waylon

Subject: Proposed Utility Route

Nate Monfort
744 Brookwood Dr.
Seymour, WI 54165
920-858-4015

To whom it may concern,

I'm writing to inform you that after the recent mailings I have received I am very concerned about the Bay Lake Project area 1 and the possible changes. After reviewing the routes I believe that there are better routes than the ones outlined in the mailings. I am afraid of the impact on my family and my neighbors in the surrounding area. I am worried about the impact that this may have on my family and the outlook on the value of my property. I object to the proposed changes along the A480-1 route. I will use the resources that I have available to prevent this section of the project from occurring. I am available to discuss my objections on this matter and to answer any questions anytime. Feel free to contact me at 920-858-4015.

Respectfully submitted,
Nate Monfort

Thank you for hosting the information sessions on the Bay Lake Project in May and October of 2012. It was much appreciated that your organization took the time and effort to organize the communication to residents, citizens, land, and property owners in the areas under consideration within your plans. It is clear that you have a vision of a "Big Picture," as it relates to the Bay Lake Project. The resources that you've created to facilitate the meetings in May and October clearly demonstrate that. Your "Big Picture" includes lots aerial imagery and lines on maps.

These sessions provide a communication opportunity for those that live, work, recreate, raise their families or run their business in the affected area. The opportunity is one that can be used to keep your organization aware of the many "small pictures" potentially affected by the Bay Lake project. These "small pictures" are alive and visible within the aerial imagery and under the lines you've drawn on the maps.

Under the lines is an interesting metaphor. In this case, it means that those potentially affected were on the map first, under the lines your organization has drawn. Figuratively speaking, in the future, it could mean that we're left to continue about our lives and activities within our "small pictures" under the lines that result from your project.

Our personal "small picture" began over ten years ago when we decided to move out of Appleton to provide a more rural upbringing to our growing family and live our home lives outside the growing urbanization of Northeast Wisconsin. We were seeking a greater quality of life and a means of providing that future to our children. We didn't rush into the process but looked a long time for a piece of property that would satisfy our criteria and needs, among which were:

- "Close to work (Appleton, Neenah)
- "Close to schools (parochial in Appleton)
- "Close to transportation (good roads, airports)
- "Close to shopping (food and other)

¿Rural, pastoral landscape

¿Property that can be nurtured, appreciated, and cared for

We found what we were looking for in 2003 and have ever since never regretting moving to Freedom, WI. The property is small, but surrounded by mature trees. It is an original Homestead Act farm, dating back to the 1800¿s. We are only 12 miles from downtown Appleton, so we fit the ¿close to¿ criteria across the board. We¿re conveniently located nearly midway between Appleton and Green Bay, giving us excellent access to future job and career outlets, as well. We¿ve spent the past decade cultivating our lives, our ¿small picture¿ in Freedom. One of the first things we did was pay to have the aerial power lines that ran to the house buried so that we didn¿t have to concern ourselves with being under the lines. We¿ve planted trees and worked on improving our home and the natural setting around our home. We¿ve expended significant time, money and energy building our life and future in Freedom. We¿ve done all this only to find ourselves under the lines again on your map.

If you¿ve read this far, thank you for making an effort to understand our point of view. We are not opposed to progress and the provision for future viability of our utility grid, but we are opposed to the idea that our property is under the lines.

Center Valley Road does not appear to make sense to use as an East/West connector in your construction of the new 345-kv or 138-kv lines. There are numerous homes very near the proposed power lines, and there is a DNR navigable waterway along the proposed lines. From the proposed line route, the lines would run through a DNR marsh located in front of our home which has standing water most months of the year. The marsh is a habitat for much wildlife in the area and is an annual stopover for many migrating birds. The power lines would destroy this habitat and would destroy the natural environment that we have created through spading in numerous trees. We have invested considerable resources to improve our land, the wildlife habitat, and our home. We do not want to see that destroyed.

Additionally, the new substation, needing 40 acres of land with easy access to some of the existing transmission infrastructure would surely best be positioned in an area of open farmland to the north and east of our property¿s location. If you look at the ¿small picture¿ below taken from the Outagamie County GIS system, you can see the section of Center Valley Road that is between Ballard Road (to the west) and French Rd (to the east). Our part of the ¿small picture¿ is within the red oval.

What should stand out to you is the fact that this stretch of Center Valley Road is not some sparsely settled farm lane. You should notice that there are homes all along the northern edge of the road. Like us, all of these families have their story and their ¿small picture¿ that is under the lines on your map. You¿ll also notice that to the north, the landscape opens up significantly. That is because Center Valley Road is really becoming the northern edge of development as Fox Cities urbanization creeps northward. The openness you seen in the top of the ¿small picture¿ is much more emblematic of what land use is to the north and east of us. You can see that in your ¿Big Picture¿, too.

From your project site¿s map, you can see our ¿small picture¿ (in red oval) under the lines. You can also see that there are many other, more viable choices that impact many fewer property owners.

It is our understanding that your first and primary route selection criteria should be to follow existing right-of-way paths. While there are many existing right-of-ways in the area surrounding our property and to the north and east, we are wondering if you¿ve considered strongly enough the viability of utilizing the path taken by the Guardian II pipeline in Outagamie and Brown county. We don¿t recall seeing that ROW indicated on any of your maps at the information sessions. Another neighbor of ours noticed that the Guardian II pipeline was missing on your maps and brought it up to one of your representatives at the October session. The representative¿s

Bay Lake Formal Comments - Additional Comments by County/Municipality

comments led them to believe that the ROW was either unknown to ATC or forgotten by some of the engineers in charge of the design of the transmission project. Either way, that pipeline cut a large swatch through farmland several years ago, travelling north and slightly east (boarding the Oneida Nation tribal land). It would seem that would be an ideal corridor for consideration.

We're looking forward to hearing the date for your next public information and communication session. We are also looking forward to seeing the Guardian II gas pipeline that was mentioned to you as missing on your maps present on the maps at the next session.

We hope that you are taking strong consideration from the communication and feedback provided by those you have invited to those sessions. Over ten years ago, we moved to Freedom. We moved to Freedom to create a new home for us and our children. We choose to live in Freedom and in our home's location for many reasons and plan to continue our lives here. Our small picture is but one that you need to consider in your planning, but the lines do not belong on Center Valley Road.

Sincerely,

Brian & Laura Nason

We live in a very quiet, beautiful subdivision with a lot of very concerned neighbors. We feel that area B for a substation would be a very negative choice. We all believe the best substation location would be A, or D based simply what is in those areas.j

Please, please, please do not put a substation in ara B. Thank you very much for involving us, we really appreciate your efforts to involve and inform everyone.

Our subdivision is located in an area that exist of beautiful homes near sitiing Area B. By putting the new sub station in this area will only destroy the beautiful land & bring down our property value. We are also concerned with the health of family & neighbors.

Please consider any SITING AREA OTHER THAN B. SITING AREA C OR AREAS NORTH of us look like a better fit.

I live in Project Area 1 just north of Substation Siting Area 1, along the area marked A480-1. We have a small street of just 10 houses and very wooded. French Rd is the main street we access from Geenen Ln. French doesn't even have shoulders as the properties are rather close to the street. I hope this route is not chosen as the lines would almost be on top of the houses along French Rd. I also own the undeveloped corner lot of Geenen & French on the north side. If the line was to run here, I don't believe I would have the opportunity to build on that lot!

Thanks

Thank you for the information you sent us concerning the substaion and power lines. We have an issue with a substation to close to nice homes, we like our nice view of beautiful farm land & farms next door. The other issue we have is the depreciation of our property if it is to close. Please put yourself in our position. After all substations are essential but an eyesore.

Thank you

Mr. & Mrs. Larry Peters

Subject: Bay Lake Project Comments

We are sending this email in regards to the information we have been sent regarding new electric transmission lines proposed in Outagamie county. First of all the post cards that are sent out are so full of yellow route lines and numbers, that it is very hard to tell what is even being proposed. It looks like property we purchased awhile back on Nicholas Road may be affected. Currently this is rented as farm land, but we purchased it with the intent of building a home(s) on the property for ourselves and/or our kids in the future. Putting any type of power lines through that area would greatly reduce the value of our property, not to mention the potential health risks of living near high voltage lines and the noise/nuisance factor. Therefore, we are 100% against any type of electric transmission line going through our property.

Regarding corridor A950-1, what are the options when there is an existing line (I-113) which is surrounded by houses? The 2500' rite of way is all houses, so can this line go further south through farm fields without any dwellings? (Brockman, Huss, Weyenberg properties)

The power lines running thru on Schroeder Rd, have a constant humming. I do not want lines any closer than they are now.

Property value has decreased already, power lines would not help. I've lived here all my 66 years. I've enjoyed the quiet, peaceful, countryside. There's nothing peaceful or quiet with power lines.

between Segment A185-1 & A40-1

The existing substation on French Rd. is 3/4 of a mile South of our property. The land directly north of that Substation is currently farmland. So that would be a logical place to put the new substation. If you could add power lines to Segment A40-1 that would be the easiest as this is farmland until the corner of County Rd S and C. Thank you for this open house so we could ask questions.

Based on prior experience w/ ATC, ATC has a preplanned agenda and 'public input' is a joke. The "priority" of following highways seems to always be a low priority. Hovde's liberal mindset comes through loud & clear if you follow the patterns of ATC's history.

Please feel free to contact me.

I'm writing in regards to Project Area 1 - Substation Siting Area B. If projects like this are necessary they should be built in an area that affects the least amount of people. They shouldn't be built by the entrance of a subdivision with close to 40 homes. I want my children to grow up in as healthy as an environment that I can provide. I'm sure that those making the decisions for your company want the same for their families. I feel bad for the Milky Way dairy farm and Irish Waters golf course. This is their livelihood. Our property value has already gone down. We can't afford more. Look at what has happened to Patricks Golf Course and subdivision in Lawrence. I already can't get phone reception in my home. This should be put where it isn't such a high traffic area. Would it help for me to send around a petition? Please listen to the residence on Sunshine Road. We don't want you to wreck everything. That is the words of my eleven year old daughter.

We oppose the siting of substation route on our property. As the owners of the family dairy farm we are concerned about an industrial type project taking valuable crop acres away. We are also concerned about the substantial clearing required around the line taking out vital trees in our neighborhood. We live in a quiet area that would not be a good site for a major substation. We have 1 that is only ~ 2 miles away. We want the substation to be located closer to the areas that benefit the most to the north and not in our farm fields. Thank you.

Comments:

This area hosts populations sand hill cranes, blue herons, loons beavers moose eagles variety of turtles as well as a wide variety of plant communities. The east-ernmost pathway potentially infringes on three watersheds, all of which have their headwaters within the protection of the Club's property lines. The first watershed, one that includes Big Drake, Little Drake, Spear, Erickson and Crescent Lake, is the headwater for BryanCreek. The second watershed includes Trout Lake, and is the source for Clear Creek. The third wa-tershed includes Little Bass, Big Bass and Bass lake Creek. Clear Creek and Bass Lake join Bryan Creek (Bass lake Creek doing so well south of MNWC property), and this larger version of Bryan Creek ultimately flows into the Escanaba. Changes to headwater systems are particularly meaningful - they affect the integrity of everything downstream. Changes to headwater systems are particularly meaningful - they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream. We are very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to main-tain the easement area of the transmission line.

We believe that the power line and associated implementation activities will likely threaten eagle-nesting sites, of which we have several.

MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property ((>9,000 contiguous acres, with small embedded roads). Whole watersheds are included in the property, and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. The Erickson pathway effectively dissects (cuts in two) the area protected by the club, and will do so at scale much more profound than does the Bryan Creek Road. It will break a large protected space into two smaller fragments. As a result an increasing fraction of the MNWC will be abutting perpetually degraded habitats. Further some species will doubtlessly be unwilling to move through that degraded habitat.

We believe the impacts from traffic necessary to operate and maintain the transmission lines will be detrimental to the wild-life habitat we have worked to protect.

We believe that the EMFs (electromagnetic field) impacts would be detrimental to wildlife and fish on our property.

We believe that our Jack Pine areas, which provide ideal Kirtland's Warblers' (an endangered species) habitat, will be dis-turbed by the transmission lines.

We believe that the route in the eastern part of the MNWC (code numbers 040-3, 050-3, 060-3)

Bay Lake Formal Comments - Additional Comments by County/Municipality

will conflict with our agreement with and commitment to the Michigan DNR's Private landowner Incentive Program (a state conservation pro-gram that partners with local owners to reintroduce native tree species throughout the state) in the Green Hills. The other route (P40-3 and C30-3) would likely interfere with any future participation in this program.

The Erickson pathway also infringes on the Green Hills, an area that includes large stands of mature hemlock (unusual for the Upper Peninsula).

We currently have all 37 miles of our perimeter fenced in order to protect the natural areas we have worked diligently to preserve. We believe opening the area for the transmission lines will provide additional access that could be detrimental to our 86-year effort. (It has been my/our experience as a part-time resident of the Upper Peninsula and a Family Member of the Michigan North Woods Club since 1974, that individuals commonly use utility easements as avenues for travel on recreational vehicles.)

Bald and Golden Eagle Protection Act-prohibits activities that disturb (active and inactive) nesting sites. Eagles are known to nest throughout the MNWC.

Endangered Species Act-among the animals identified by the ESA are the following, which may reside in or travel through the MNWC: Canadian Lynx-threatened.

-Kirtland's Warbler; endangered.

-Cougar--endangered and last sighted in Marquette County July 2012

Michigan DNR Private Landowner Incentive Program- More than 600 species of plants and animals are listed as threatened, endangered or special concern in Michigan, in large part because of habitat loss. Most of these rare and declining species occur on private land. The primary goal of the Landowner Incentive Program is to help private landowners create and manage habitat for species that are rare and/or declining. In 2011 the MNWC and the Michigan DNR entered into a contract to establish an Incentive Program at the MNWC in the Green Hills area, which would be impacted by the Bryan Creek Corridor (040-3; 050-3; 060-3) proposal. We believe other areas of the property qualify for the program.

Michigan Wetlands Protection Act-- the law requires that persons planning to conduct certain activities in regulated wetlands apply for and receive a permit from the state before beginning the activity. Permits are required for activities including construction, operation and maintenance of any use or development in a wetland.

In addition to the laws cited above the construction, operation and maintenance of the high-voltage power lines will:

-degrade streams and stream crossings with an abundance of silt and other matter -fragment both plant and animal habitats thereby reducing mobility for some species and threatening their existence

-fragment habitat which can also create a human commensal condition whereby animals that are comfortable with humans but threatening to other animals (cow birds that take over the nests of more fragile bird species for example) drive out threatened, endangered or species of concern

-create more interruption in the forest edge providing significantly increased opportunity for invasive species

-provide a much greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs and the like threatening both animal and plant life

As a member of Wisconsin's Green Tier program, ATC pledges its commitment to environmental sustainability. We believe that the impacts to the Michigan North Wood Club from the proposed transmission lines (040-3, 050-3, 060-3 and P40-3, C30-3) would result in impacts so profound to our environment and wildlife that they contravene ATC's commitment.

What specific changes are planned for the existing transmission line that crosses Sharon Rose Court one property away from my home ? Will the size of the "right of way" change at all ? Or is it simply adding an additional line to the existing cross bars on the existing power poles ? Please respond to my questions either via email or phone. Thank you, Gerald Tatera ght49@aol.com or 920-788-4533

After Attending the meeting at the Radisson on 10-9-12. I learned that my land was under consideration for a sub station. I own 40 acres and would consider selling all of it. We are at the stage in life where we want to downsize. If interested get back to me otherwise I'm going to sell to someone else. Our land is on the Northwest corner of C and Center Valley Rd.

We strongly believe that transmission lines should be kept a minimum of 600 FT. away from all occupied structures including barns; that stray voltage is detrimental to the health of people and animals; and that these lines have a major negative effect on property values. We will therefore fight this by all means open to us including legal action.

Please drop the consideration of expanding the Line going east, south of Freedom in Project Area #1. Our residence is the minimum distance from the line now and expanding it would hurt us. Im also partner in the LLP Lots remaining in Garden Estates. Our parents spent over 700,000.00 developing these Lots and 5 of them would be difficult to sell if you expand. I also have 10 acres of land west of Wausaukee along Hy C in project area #2 which you propose to expand. This would deffently degrade my property up there.

Thank you

Subject: Re: Location of Lines

Of course we would vote AGAINST relocating the lines! They should be run along EXISTING LINES. New subdivisions in area will lose property value. Your company may say otherwise, but we will not purchase a lot under/near power lines.

Dear Kelly,

We are beyond devastated at your plans and were told by Greg Jadin that this is a "done deal" and the wires are going to affect the homes on Outlook Drive. We have a beautiful home in the town of Freedom that has been ruined by the approval of a huge Factory Farm in our back yard. We've been here for 40 years but are forced to leave due to the stench. Our son purchased a home in the subdivision your wires will destroy. Our plan was to build a smaller home close to them ... With the covenants that would prevent a property value loss like the one we've already encountered. Since Shane moved in...not a lot has been sold pending these wires! As several stated this weekend, "I wouldn't buy a lot in that subdivision!" I've learned the hard way that these deals are done and public input is a waste of breath. My husband & I cannot move forward and we are heartbroken for our kids. Please tell me exactly (map) how close these wires will be to W3375 Outlook Drive. Note that there is already a huge set of power line already running through that subdivision!! As you can see by the time... This is serious enough to keep all of us awake.

We disagree with this action due to:

This will depreciate the value of our home and land a great deal seeing the lines will go right next to our property/home.

The stray voltage will be very bad harmful for our health.

This is unacceptable and we are against this.

My town (Freedom) does not need stronger power lines and bigger substations. We don't want to be exposed to alot more EMF's. EMF's cause cancer and disease and we chose to live "out in the country" to get away from harmful pollutants. Your project would decrease our property value's in our subdivision and surrounding houses. And make it very hard to sell our homes, because no one wants to live by a substation. Also substations are terrible to look at. Your project would have an awful impact for our town of Freedom. Freedom is a great place to live, I hope it stays that way.

Since moving into this area we've developed 58 acres with various government agencies. We have acreage along the proposed route currently enrolled in Wisconsin's state managed forest program; federal state and county CRP (conservation Restoration Program); and adjacent to our acreage is a wetlands restoration project - all of which would be negatively affected by expansion of power lines. The wild life affected includes nesting eagles, hawks, owls and badgers. Ten years of native prairie restoration and over ten acres of native tree plantings would be at risk of getting destroyed. The Duck Creek watershed needs property owners like us protecting the ecosystem to benefit everyone's health & well-being. We implore you to pick a path that won't reverse the progress we've made!

We would ask that you consider an area other than near our land at C60-1/Y3 section on map. We have purchased land to eventually build our retirement home in the future. There are many other homes in/around our land.

If the project would go through our lot it would make our land virtually unsellable because most people would not want to build a home with a tower in their yard. Please consider a less populated area.

Thank you for your consideration.

Subject: power line concerns

Importance: High

To Whom It May Concern:

My name is Nathan Feltz and I live at N4342 Panoramic Avenue in Freedom, WI with my family. We have two children (ages 9 and 1) who love playing outside in our yard with all the other children in our neighborhood. With the potential of the high voltage power lines being installed in our back yard I have major concerns for the safety of my children and all the other families in our neighborhood. Children may be walking under these power lines on a daily basis to go to their friends' homes to play.

I am also concerned as to why the power line route would go through our subdivision as destroy our property value. There must be alternative routes that would have less impact on the property value in the Scenic View Estates subdivision and most importantly less impact on the safety of the children that live in this subdivision.

I would like to know why this route is even being considered over alternative options???

Respectfully,

Nathan L. Feltz

RE: Bay Lake Project
Green Bay Substation Siting Area
Project Area 1 - Green Bay to Morgan

Dear Project Leadership Team and Local Relations:

The Bay Lake Transmission Line Project is a mammoth undertaking by American Transmission Company (ATC), with many man hours already expended for planning, and monies spent. The project surely will be a welcome addition to many, yet a disappointment to many as well.

We, as small business owners, accept the responsibility of those we employ, to include their families, and each customer to which we extend our professional services. We sincerely understand the responsibility ATC has undertaken to provide a reliable electric system to all its customers, meeting their needs of today and also their needs for tomorrow. It is a given that our need for additional electricity will continue well into the future.

We recently attended your open house of May 12, 2012, at the Radisson Hotel and Conference Center. The open house was informative, for private land owners were given an opportunity to raise questions and provide input to ATC's electrical engineers, environmental consultants, and other representatives with knowledge of the Bay Lake Transmission Line project.

During the open house, we were provided a general overview of the entire project, specifically Project Area 1, Green Bay to Morgan, to include locations of many potential corridors. We understand nearly 75% of those potential corridors will be dismissed, based upon the selected location of the Green Bay substation site.

Further, in various conversations with electrical engineers, environmental representatives of ATC, we were given a rather vague general area for the location of the Green Bay substation. We are relatively sure ATC, along with their consultants, have determined several locations they truly prefer; for so much will be determined by the selection of the location of the the Green Bay substation site.

American Transsmission Company
July 18, 2012
Page 2

ATC representatives provided us and many others an aerial map (see attached Map No. 1), highlighting your exsiting overhead 345-kv electrical line, and possible corridors as related to my

Bay Lake Formal Comments - Additional Comments by County/Municipality

personal property. My property is located just within the proposed siting area boundary of the Green Bay substation.

We have prepared the enclosed Map No. 2 taken from the aerial information, identifying the existing 345-kv overhead electrical line (solid red) and a proposed 3,000-foot corridor (yellow). We have outlined each parcel of my property, indicated by the dark blue solid line. Further, we added the approximate location of an existing 30-inch diameter high pressure pipeline, graphically indicated by a red dotted line. We ask the entire project leadership team of ATC, their engineers, environmentalists, and other project professionals, to take into account that my dairy farm has been selected on two (2) different occasions; initially for the 345-kv electrical line and again several years later by the ANR natural gas pipeline. We ask all involved to not cut through my dairy farm for a third time. It is our position we have already stepped up to the plate twice for the betterment of so many.

We thank you for your time and consideration. Should questions arise or additional information be needed, feel free to contact me directly at (920)336-4496.

Sincerely,

Robert J. Ambrosius

Map No. 2

Brian & Rebecca Bartoszek - W3052 Sunshine Rd, Outagamie-Oneida Town

BRIAN BARTOSZEK	10/03/2012 - Island Resort & Casino
REBECCA BARTOSZEK	

Comment Date: 07/30/2012, by Brian Bartoszek

Seq:

Communication Type: Formal Comments

PDF Name: C_BBartoszek073012.pdf

To Whom It May Concern:

These comments are in regard to ATC's Bay Lake Project. I received notice via U.S. Mail that a potential electric transmission corridor was proposed through my property along, what ATC refers to as, segment P200-4. I understand the need to increase electric reliability but the location of proposed segment P200-4 does not make sense for many reasons for which I have outlined below.

Proposed segment P200-4 borders the Escanaba State Forest and is also in close proximity to Hannahville Indian Reservation land. This particular route is also composed of a large block of mature forest comprised of northern hardwoods as well as cedar lowlands with numerous stream crossings including the Ford River, Cedar River and Forty-Seven Creek to name a few. The Forty-Seven Creek and Cedar River are designated trout streams; crossing of these streams would open the canopy causing water temperatures to rise thus increasing the potential for stream stress and fish kill. A new wide corridor that must be maintained with low growing species for perpetuity would fragment the continuous large forest blocks reducing biodiversity and allow for invasive birds such as Cowbirds to infiltrate and reduce, if not eliminate native bird populations that require large unbroken forest blocks. Invasive plant species such as Garlic Mustard, Spotted Knapweed, Leafy Spurge and Buckthorn would flourish and overtake the indigenous plant species.

It is understood that electric reliability is needed throughout the Upper Peninsula of Michigan but a more sensible approach is to maximize corridor sharing and realize all the benefits that come with shared impacts. Corridor sharing is a basic siting criteria for many reasons. The concept assumes the impacts are shared with multiple facilities such as existing roads, gas pipelines, electric lines, railroad right of ways, etc. There are many opportunities for corridor sharing in other proposed corridors for this project and I encourage ATC to pursue corridors that offer this opportunity. To create new impacts, where these sharing opportunities exist, does not make sense from a cultural, financial or environmental perspective.

Regards,

Brian Bartoszek

Subject: Bay Lake Project comments

Hello,

I attended the informational meeting at the Radisson in Oneida regarding the proposed power line upgrade. Living in the area that is being surmised for location of the substation, I must share our family's thoughts.

We recently purchased 10 acres of land adjacent to our home property and have planted several hundred Christmas trees with plans to build a barn and housing for aging parents to live near by. To think of losing even a portion of our small acreage as a right of way would be extremely detrimental to the plans that we have for the property. We are not interested in renting or selling land for the purpose of power lines and would be strongly opposed to any such discussion. There are several homes and an active quarry on the block which would seem to create problems for the transmission lines and/or substation.

At the meeting, I was given Bay Lake _05142012_1-7 0164 as a property reference number. We wanted to share our thoughts as you go through your consideration and planning process.

Sincerely,

Steven and Lisa Blohm

To whom it may concern:

I would like to voice my opinion on your proposed power line across my property. It's in S100-1. We own about 70 acres in the proposed area. My wife and I bought 4.9 acres adjoining our tree farm and hunting land with thte intent of building our retirement home there or if things change, at least as an investment. I feel if the line were to go through our land, it wouldn't be buildable and we would lose a lot of money on our investment.

I am guessing this project will replace WE Energies in our area. If that is true, there ought to be rates for KW usage commensurate with current rates, otherwise "competition" is a lie. It is interesting nonetheless, to discover people who think nothing is too big to ignore.

My wife and I own 2 parcels of property on the proposed segments C1270-1 and S640-1 in the town of Angelica.

We purchased the parcels for a retirement investment 3 years ago. We set a home on the parcel on the west side of Co. C and are planning to set another home on the east side parcel in the near future. There are 2 \$20,000 mound systems on that property. Constructing a transmission line on the property will drastically reduce the value and even make it impossible to carry-out our plans. Please consider another option.

Thanks for your time.

I know we need a good electrical grid, for dependable electric service.

I sence most of the people in the State would prefer to have more Power Plants, where the Power is needed. this would reduce the need for high voltage Powerlines, and would possibly be more efficiant, and could have the potential for better reliability.

Thank you for all the information, on the new plans for the power lines.

There is a power line west of French Rd west of my property. I think any new power line should follow that existing right of way where possible and any sub-station should also be on that right of way. I don't want any substation or power line on my property because I have cattle and farmers with cattle have enough problems with stray voltage. The few peanuts landowners are paid for more right of ways don't pay for the headaches down the road. So thanks but no thanks.

My House / with less than an acre on Hwy 54 and Ranch Road a 1 mile from Hwy 55 Intersection of Hwy 54 meet! Living near or around The proposed Transmission Line is not in my favor! I oppose it! If this Line coming over my house or near it; moving is one choice I can make! Will ATC buy my property; so I can move some where else; away from this area! Who would want to live near these big power lines? How will my property be affected? How close will I be to the power lines with Area F on the map showing?

Comments:

I am very concerned that one of the proposed corridor routes (Segment C50-1, S4, Site F) is between my house and my neighbors. Please consider moving this potential route to Hwy C or the French Road route so that there is less impact.

Beginning at the corner of Krupp Rd on the corner of Krupp Rd and to the south of said property of Tom Dorn along Krupp Rd and the property of Tom Dorn assigned M250-1 and to the east on Krupp Rd is the headwaters of the Duck Creek watershed. These waters flow eastward to the Duck Creek which flows through the Oneida Indian Reservation eventually ending up in the Lake Michigan. Be advised that the water flows through tribal land.

In reference to the new transmission line, I do not want it to go through my hunting property at route M250-1 M380-1 M370-1. Reason being it would totally reduce the property value and provide less hunting opportunities. There is an alternate route if a substation comes about is along A-493-1. The idea of the transmission line is to go north, then go north, not east & west. More suitable is along HiWay 47 North from your substation in Appleton where there is room to add on. I own 80 acres along the Fallen Timbers Environmental Nature Center and don't want it disturbed along with Fallen Timbers, Environmental Area. This area is used for study purposes with other school districts. The other school districts are, Fox Valley Technical College, Wrightstown School District, Seymour School District, Ashwaubenon School District. I am sure this area could be avoided also. It would lessen the degree of study if this line was put through there and neighboring properties. There are numerous buildings at this site and I am sure they don't want the pristine of the area destroyed. It would make more sense to go north along A493-1 since one of the target areas is through Angelica north.

My property is located in the Town of Black Creek.

My wife and I own 220 acres at the above address and have lived here since 1997. We do not want any high power transmission lines or sub stations on our property. We hope we do not have to deal with this situation. We are willing to oppose the installation of power lines or substations on our property through the court system if necessary.

Thank you

I sure hope the site you pick is one that does not have existing homes near by. Let people decide to build next to something like that, they then know up front what they are getting into.

I read your blip on if this impacts property value & thought to myself what a spin you tried to put on it. There is nothing about this project that would actually drive a property value any where but down. When I have gone out house hunting the first thing I do & I know I am not alone is scratch any home off the list that sits next to high powered wires or worse yet an eletrical substation. As for health concerns we all know the Tobacco Industry still claims smoking doesn't kill...& a whole lot of other professional line up on the other side of the fence on that issue. - Hoping you can strike a deal w/ a farmer & some very open land for your project.

Subject: objection to the powerline

Dear Mr Hovde,

My name is Patrick Klass and I reside at W3155 Kortney Lane, Seymour, WI. 54165. This is a follow up letter to an email sent Oct 19, 2012. My wife Mary and I have lived at this address since 1996. We have been keeping up with the information on the Bay Lake Project and the meetings have been very helpful. I have several concerns about such a project going through property adjacent to mine. First and foremost there are health concerns considering the power of these lines. My wife has heart problems with atrial fibrillation and arrhythmia. At times patients with these conditions have pace makers. Obviously with the amount of stray voltage I am concerned with the effects on any present and future care she requires., My second concern is the limiting effects of such a project on future municipal expansion. Seymour and the immediate area have shown a steady growth pattern for the last 30 years. Such a project surely limits this continued pattern and quality of life., In addressing problems I always welcome possible solutions from the person raising the questions and problem(s). My contribution to a solution would be to follow the established power line routes. These lines have been in existence for some time and, based on maps I have seen at the informational mtgs., offer enough space and distance from residential areas to be both safe and aesthetically palatable., I am not one to prevent progress, in fact I promote it, when done properly with the legitimate concerns of the people immediately impacted. I object to the lines following anything but the already existing power line routes. I have strong objections to any and all power lines adjacent to mine and my immediate neighbors property.,

Thank you for listening to my immediate concerns and objections.

Sincerely,

Patrick Klass, property owner, W3155 Kortney Lane, Seymour, WI. 54165

Dear Mr Hovde,

In addition to the above email it has also come to my attention the issue of the fragile situation unique to the stone/rock formation to this area. We have a high concentration of arsenic in our ground water and subsequently our wells. This is a result of chemical reactions between the water levels and granite rock formations we are situated on. It is my understanding that to place the towers for these lines correctly they need to have a sound base going deeper into the rock base. I strongly caution you in that any disruption in the rock formation can result in the chemical reaction producing unacceptable arsenic levels in our well water thus making them well above the gov safe drinking stands and thus useless.

My wife is an attorney with a practice in Seymour. We have consulted with environmental attorneys, as have other residents, and are willing to fight this proposal.

Thank you for your attention to this matter.

Sincerely,

Patrick Klass, property owner, W3155 Kortney Lane, Seymour, WI. 54165

Subject: Bay Lake Project

Hi we are Scott and Cassandra Mullen. We were not available to attend the spring meeting. According to the map we were mailed, the Green Bay substation area is where our 67 acres of land is located. It is south of Seymour SW corner of Highway C and Highway EE just off of the indian reservation where the gas line comes through but goes around the reservation because of their objections. We have turned down several offers to sell our land, because our plans are to build a home there in 1.5 years. This would pose a huge problem for us. At this point there should be a more condensed version of where the substation may go. The acreage may seem adequate but we are not living under power lines. This would prevent us the opportunity to build future homes for our children. Please contact us as soon as possible, respectfully, Scott and Cassandra Mullen.

Subject: lub stations locals

Sir: I am a property owner on one of the possible substation sites in the town of Osborn, in Outagamie County. There are several reasons why I would like the committee to not select my property, or any other property in this proposed area.

Reason #1: My family owns the Mullen Homestead, a family farm in existence and in the family, for 145 years, and still in the dairy business, Our family wants to keep the Homestead much as it is and we do not want power lines and or stations spoiling the pristine habitat of the farm, nor the possible negative environmental affect on the adjacent swampland, the Duck Creek Drainage basin.

Reason #2: The Duck Creek drainage basin. Included in potential site D, is a portion of the swamp lowland that is the headwaters of Duck Creek, an area of frequent flooding, and a delicate ecosystem. The overflow waters from this area flows through the Duck Creek southward, to Freedom, and then through the Oneida Reservation to Green Bay.

Reason #3: There is a small airstrip almost adjacent to Area D, owned by Gerald Steffins, and this runway is used often by his small plane.

Reason#4; In spite of what you say that living under or near the transmission lines, I have read too many studies that claim otherwise. I would never build or want to live, or have my family live in proximity to the electromagnetic disturbances.

Reason#5: Just the presence of a substation on or near our property, would detract from the economic and the esthetic value of the properties in the adjacent areas.

SIR: I am the owner of the Mullen Homestead farm, located on siting area D, town of Osborn. Not only is it, this a century farmstead, but it is soon to be a 150 year old farm, my great grand parents well among the first pioneers in the township and our farm is now the Olchael farm of continuous ownership. We love one farm as it is. the main buildings are all 112 years old, being rebuilt after an 1999 tornado. to us, it is beautiful as it is.

We do not wish to have a substation of power line on or near which might create possible health, and/or aesthetic peirels, and/a economic concerns.

A second concern I have is the proximity of sited to a vital wetland swamp, the adjacent origin of Duck Creek Drainage system, waters that collect and drain through the reservation. the is a vital areas per Birals, fauna and flora. Google a satelite photo of this area to see just how unique the entire area is to the overall ecosystem. thank you.

Hi, we are Scott and Cassandra Mullen. We recently attended your meeting at the Radisson and gathered more information and spoke with several of your representatives. Our property is segment 0240-1 and M420-1, currently we rent a good portion of our land to a farmer, but this is temporary and we plan on building a home there in approximately 2yrs, also we are in the process of working with our oldest son and his wife to give them a portion of land for them to build a home on within 3 years. We have 2 children that currently live with us, but it was and still is our plan for them to build homes on the same property when they have married and are to that point in their life. This property since in our ownership has always been slated to be residential, clearly this would not make our property feasible for any part of your project. Please keep us informed, thanks, Scott and Cassandra Mullen

Our property is on the preliminary route for the power lines. We do not want any power lines going over/in/any where near our property. I feel they are bad for health & of course no good to look at. We have kids, animals and plants -> we don't want power lines near them. We are continuing to plant tree's & I don't want to have tree's cut/not be able to plant where I want to just because of some lines. We do not want them in or going over or near our property.

We live at the corner of EE/Sievert Rd/Whitetail Drive. Whitetail Drive and Sievert Rd. are populated residential areas (Country subdivisions) with many families and young children. If substation siting Area D is considered "ONLY" The far North edge of this area OR the far South edge (not as good) should be considered. No powerlines or substations should be located near Whitetail Drive or the Western end of Sievert Rd. There are many rural agricultural areas with low population and away from family housing that avoid this area. Our assumption is that Preliminary Route A485-1 is in the existing powerline right of way and NOT near the North/South portions of Whitetail Drive over the residential areas.

I Do Not want high Voltage powerlines or substations on my property! or in my neighborhood! I Do Not want the health risks associated with living near them (& I do believe the statics!) I worked hard to have what little I have in this world Please leave me with that Peace! Instead of running all these high voltage lines across the country why don't you generate the electricity where it is needed? You have large lakes in northern WI - UP Area why not wind turbines off the lakes? - hydro stations? -solar? God gave us the sun! - Go Green!

I have property located with the address of N7842 Cty Rd Y Seymour WI 54165.

I do not want these power lines or the substation on or near my property. On our property my parents originally owned 76 acres. There are 3 family members with houses on this property. My wife and I also plan on building here soon. These power lines and substations are not healthy for people to be close to. The majority of our property is also wooded. This would be devastating to the wildlife. I strongly object to this on or near my property.

Subject: Bay Lake Project - North Appleton to Morgan

I am strongly against the Bay Lake Project. I live down the French Road, which is one of the two proposed routes for this project. I went to the meeting at the Colonial House in Freedom, WI. I have been doing research on the health risks for living next to high voltage such as 345,000 volts and 138,000 volts. These are the two lines we were told that will be running through the area and lets not forget that these two lines really equal 6 lines total, which was not in any of the proposed information I saw at the meeting or given in the mail. This was something that I happened to ask enough questions that brought this extra information up. How many people that are potentially being affected by these high voltage power lines know exactly how many lines will be going through??? Is it 2 or is it 6??? Perhaps this will be a secret??? Too bad the cold hard truth and facts were not told at this meeting so that people would know the real truth. The results are up haling. I am just sick to my stomach that anyone in their right mind would not blink an eye at putting human lives and living creatures at risk of illnesses, sickness and possibly even death!!!! This was a bunch of lies. When I asked questions you always seemed to have a way around hiding the truth. I was told that 345,000 volts is no different than running your hair dryer, microwave, flat iron, etc. and that this is completely harmless. I will have you know that my household electrical items all running together 24/7 could not come close to 345,000 volts of electricity running 24/7 just behind my house 365 days a year. Trust me I have been doing research. And when I asked one of the ATC Workers at the meeting if they would be willing to move their families and children next to the high voltage they said "NO" without hesitation, how am I supposed to justify living next to the high voltage lines with my family??? This is not welcomed in my back yard, not now or in the future.

To: Rineer, Ken - PSC

Subject: Re: High Voltage (in reference to 1S1A against default 1S3A)

Hi Ken,

Thanks for getting back to me in a timely manner! Your time is greatly appreciated. This is in reference to 1S1A against by default 1S3A.

I had tried to contact ATC yesterday and asked them to let me know what time line I am looking at for getting information to both you and them. After quite a bit of hassle yesterday trying to find someone who would call me back on this matter I finally got a response a little after 5 pm last night. I would like to verify this with you. Jim Olsen said I have until the end of December to present any information to them. This doesn't seem right to me considering I briefly spoke with Christopher Bertram about two weeks ago and said I should have all information to them and you soon. So I guess I am unsure of the time line. Thank you in advance.

I have been going door to door talking to a lot of people regarding this high voltage project and I am very disturbed by the amount of people that are clueless with this whole thing. I am talking about 60 people so far and haven't even put a dent into the people affected. This is in reference to 1S1A against by default 1S3A. They have not been getting mailings with any information keeping people informed on this project and I am also not getting mailings. Some people have said they are getting a letter saying there are not directly affected by this project but I believe they are wrong. This is misleading to the community making people think the project is over and not running through here, so they think they don't have anything to worry about.....this is unacceptable in my eyes! Just because they don't own land directly affected by the high voltage lines does not mean they are not affected! This worries me because we are all affected because we live closer than we should for potential health reasons and the decrease in . I have many concerns of the truth not being told. I can't believe that peoples lives aren't more important than the power lines that are for MI. This is devastating and stressful. I don't agree with this at all. The last thing we need is 483,000 volts of electricity along with the existing 138,000 volts of existing electricity running through our neighborhoods. I don't feel it is fair to our families and children to have to live next to such danger! I have sleepless nights and can't understand how ATC workers can sleep at night, but I suppose they don't have to worry about high voltage running through there neighborhoods. I have not heard of one single person who is for this project. They need to take this project away from our community, it's not welcome here.

Why do u need to put another substation 5 miles north of NAP Station. Just build on to that one. the landscape is littered enough with powerlines why wreck more good farmland somewhere else. Urban sprawl is bad enough taking good farmland. Now you want to buy more land and turn it into a sub theres plenty of room by NAP sub to build on why wreck MORE Land!!

I was unable to attend the open house. How big is this "potential substation"? Are the transmission lines underground or above ground? The concerns I have are probably similar to other people in the area. My concern is the sight of a huge substation and power lines so close to a small residential having a major negative impact on property value. Can not the substation be located away from the residential area so as to not cause an eye sore? Please keep me posted as to another open house in our area. Respectfully, Tom Grelecki Also, is it possible to copy me in at my work email as well as my home email (above)? tom@casperstruck.com Thanks

Message:

I am writing today regarding the Bay Lake Project. I am a Seymour, WI resident and am living right on the edge of the south side of town. After looking at the map, it appears that it will be right behind my house.

Seymour is a bedroom community and we will not have any room for growth. Without having much industry, the city relies on the homeowners to carry the tax load. If we cannot grow, the current taxpayers will continue having the burden without any hope for the taxes going down. Seymour had also planned to move County C to the east to enter Hwy 54 at Mainline drive. This development was very important to me because right now it intersects with Hwy 54 and it is a very dangerous intersection. I myself have almost had two accidents there and my husband one.

I am also concerned with the value of our property. Is there any guarantees that this will not be affected?

Is there a less populated area that would be more suitable for a project such as this? I am just concerned all the way around about the livelihood of the city of Seymour. Thank you for your time-
Jeanne Hennes

Subject: Power transmission lines

Comments and concerns for corridor section 0110-1 Date 10/9/2012

I am very much opposed to the future transmission line being possibly constructed on my property for the following reasons:

¿Our property is located on an old bedrock quarry, and has a high concentration of arsenic.

Fracturing of bedrock in this area may cause well contamination. More than likely this may cause contamination of older wells, which do not have well casing past the arsenic level, which is the case of the well on our property.

¿Futures plans are to build a home in the Northwest corner of our property, which is located in the corridor section 0110-1.

¿Health concerns due to stray voltage and magnetic fields. Especially the impact on a heart pacemaker.

¿Concern over a decrease in property value

¿Environmental impact

¿Destruction of wildlife habit

¿Property owner rights- I and a number of other people feel we have been treated unfairly and have very little input in this matter. We feel that our only recourse is to contact the Seymour Town Board, and to seek legal advice.

Comments and concerns for corridor section 0110-1

I am very much opposed to the future transmission lines that may be possibly constructed on or near my property for the following reasons:

Our property is located on a bedrock quarry with a high concentration of arsenic. (Classified as a arsenic hot spot by the Wisconsin Department of Natural Resource)

Eliminates the possibility of my children building a home on the Northwest corner of my property, which is located in corridor section 0110-1

Contamination of aquifers and wells

Visual pollution

Health concerns due to stray voltage and magnetic fields. With a special concern on a heart pacemaker.

A very significant decrease in property value

Environmental impact

Destruction of wildlife habitat

Destruction of water fowl habitat

Impact on property owner rights

Family health concerns due to mental distress, because of this situation.

My family and many people from the Town of Seymour feel that our only recourse is to seek legal advice on all of the above mentioned concerns.

We own and operate a farm nothwest of Sermour. Keeping your cropland as close to the farmstead as possible is a big advantage to the farmer, so that's why your idea of possibly plunking in a substation on a 40 acre piece of prime agriculture land does not sit well with us. Good farmland is a scarce commodity.

Another great concern of ours is that we live in arsenic vein. Your digging and drilling could be a serious threat to safe drinking water in the area, and that's another priceless commodity.

The underground rock structure in project site number 1 has resulted in several artesian springs, thus making the construction site of a substation difficult.

I realize you have a job to do, but please keep in mind that we as farmers do too. Please don't destroy our livelihood.

Sincerely,
Vic and Marlene Brown

Facing the fact that a 40 acre substation could move onto our land is a serious threat to us. Yes we all want to keep the lights on, but unfortunately some have to pay the ultimate price to do so.

Many of our concerns were answered at the open house meeting on October 9, 2012, and we thank you for having such knowledgeable people on staff. However, we're still very concerned about what could possibly happen on site H. By far, our biggest concern is keeping our drinking water safe. Due to the rock being so close to the surface, the DNR has designated this area to be an arsenic hot spot. Construction of any kind has the potential to contaminate well water, and to do so would be a huge disaster. This fact was previously submitted to you, but I'm doing so again as I believe it needs careful consideration.

Thank you for listening to our comments.

I am concerned about the safety of this program There are neighbors & friends that are concerned, also. It will have a value on our home values. We live in a wooded area and enjoy the beauty of that, a well. Are you just going to cut our trees down? Isn't there an other option to this plan? Let us know if there is an alternate.

Being submitted: Four (4) pages including this cover page.

Submitted Via Email and U.S. Post Office Return Receipt Requested

Although our concern of health is first in our ardent objections to your proposed project being placed anywhere near our home, we present our information in chronological order, to underpin that our concern to protect ourselves from the Electromagnetic Spectrum (the range of all possible frequencies of electromagnetic radiation) pre-dated the purchase of our homestead property. This concern was the main concern in selecting our home site, which was purchased in the mid 90s.

Our Land Purchase

We looked in an approximately 20-mile radius from our prior home in Appleton, WI, to find a property of sizable acreage on which to build our forever home and to create a private wildlife sanctuary. After years, we found it at W2797 Angling Road, Seymour, as it had about 65 acres, a legally navigable stream running through it, rolling hills, and areas in which wetlands had been filled and where there was further wetland potential.

The downside to us. . . was that the electrical lines were on our side of the road. Concerned with

same giving us even more electromagnetic frequencies (hereinafter referred to as EMFs), we opted to build our home approximately two-thirds of a mile off of the road and away from these lines. This created significant added expense to us in burying the line that far and in constructing a driveway that long, but to lessen the EMFs effects, we believed it was worth it. (And continues to be worth the added expense of snow removal on that long of a drive and the constant expense of gravel repair.)

We would have never purchased this property if we knew your project would be coming through and near to us, never. We would never have entered in to this risk for our family.

Creation of Our Private Wildlife Sanctuary

Before building our home, we began to work on returning this property (which was being farmed) back to nature and to wetlands. It was our dream to restore the natural beauty and habitat that once was there, and then preserve and augment same. After considerable research, work, meetings, permits,* and significant expense and more work, we saw that dream to fruition. Our homestead is a Private Wildlife Sanctuary and Preserve, offering refuge and habitat to countless species through its now mature, and managed, prairie and six ponds and wildlife scrapes and wetlands, and maturing cover areas.

Award: In 1995, the U.S. Department of The Interior, U.S. Fish and Wildlife Service recognized our efforts by awarding us with the Regional Director's Partners for Wildlife Certificate of Appreciation for "Outstanding Contributions for the Restoration and Protection of Important Fish and Wildlife Habitats on Private Lands." Since this time, we have continued to take significant measures to manage the ponds and prairies. It is truly a wildlife sanctuary and

*These meetings and permits involved local, county, state, and federal agencies.

Preserve--home and habitat to countless species, including, but not limited to, Ring-Necked Pheasants (introduced and retained meaningful population), White-Tailed Deer, turkeys, Canadian Geese, various ducks, both indigenous and (outstanding) migratory, indigenous birds and super-outstanding migratory bird species, raccoons, foxes, fish, frogs (with a huge recent increase in population). . .

We would have never purchased and planned this wildlife sanctuary on this property if we knew your project would be coming through and near us, never. We would not have put ourselves at this risk, nor would we have put wildlife at this risk and spent such time and effort and money in restoring natural beauty in the pathway of your unsightly, dangerous, and frightening power lines.

Significant Health Risks for Our Family

Our biggest concern is our health. Since moving to this property, we lost several dogs to cancer, I have been diagnosed with Multiple Sclerosis, and our son was diagnosed with a life-threatening bone-marrow and autoimmune disease called Aplastic Anemia; his very life is an on-going struggle, and we believe one even more impacted by EMFs. We had our property checked for every possible hazard we could think of, EMFs being on the top of this list.

Regarding EMFs on/near our property, we were informed that they are actually lower than they would be if we moved to any of the alternate real estate we were considering which was close to our children's schools, and the hospital. Thus, we decided to stay here, and continue to invest in our home and our dreams on our property. However, we armed our family by investing in various EMF-protective devices. Blood microscopy tests we have had performed on our son have proven that his blood is better when he has the EMF protection, and stays out of high-dose EMF areas and in the relatively low EMF area of our property. Of course, your power lines would destroy that protection for him (and the rest of us).

We would have never decided to stay on this property after our son's diagnosis and being advised that it was a relatively safe place to live regarding EMFs if we knew your project was **EVEN BEING CONTEMPLATED** as coming by or near us. I cannot impress upon you the stress, and physical and emotional sickness, I feel at the thought of your power lines running through or near our property--and our sick child.

Home and Property Improvements made in Reliance of Safety of Property;
Huge Financial Detriment and Huge Financial Resale Detriment

After determining that our property was the safest choice to raise our children and continue to live our lives, we invested significant additional financial resources in improvements to it including doubling the size of the house (with a remodel to the existing portions) to an approximate 6,000 square footage, and building an additional approximate 60 x 40 steel barn with heated work area. This was a full-time, year-long contracted project.

We have been told our property value is well in excess of \$1,000,000.00; our investment alone is close to that. Before our remodel and addition, we consulted with real estate professionals who told us what today's buyers are looking for in a home, and what we would have to have in our home to get the return we need upon any resale. We put these high-end and professional features and spaces into our home. Our property is now a sprawling executive high-end home on a private 65-acre nationally recognized wildlife nature preserve.

We are also informed that if your project goes through/near our property, we will not be able to get anywhere near the return we would without it going through and that the likelihood of even being able to find a buyer for it would be extremely difficult, without giving it away. The underpinning reasoning is that it would take a special buyer in the first place to purchase this estate, and that any potential buyer putting out that kind of investment would be more like us--in wanting to run away from your power lines, not to them.

We NEVER would have made the significant additional investment in our property if we were aware of your project **EVEN BEING CONTEMPLATED** as going through or near our property. We have a staggering mortgage on this property. And we would have never taken the risk.

Recent Tragedy to Our Family

To worsen this already unbelievably anxiety-ridden situation (of your project going through near us), on December 4th of 2012, my husband was in a terrible accident causing an epidermal hematoma and 15 fractures to his upper body, and requiring an immediate craniotomy (brain surgery) to save his life. They did not expect him to live, and say it is a miracle that he did, and that he is recovering and will recover (praise the Lord)--yet he has a lot of healing to do, and it will take time. I am not employed. With my son's illness and my own disease, my concentration in the last decade (plus) has been on our family. The two businesses my husband runs (and basically is), are without him at this time, though I am trying to do what I can to keep them going, and take care of our children. . . .

I have to tell you, I do not think that I could emotionally withstand your project going through or near our home. I do not know how I could possibly continue to go on trying to do what I can for my family in the face of knowing and fearing all the detriment your project will bring to us in way of unhealth-- and especially our son's--ruining our dream home and preserve, and ruining our investment and our mere ability to sell our home. It is a nightmare.

The thought of this project going through here has been making me physically sick and emotionally

Although our concern of health is first in our ardent objections to your proposed project being placed anywhere near our home, we present our information in chronological order, to underpin that our concern to protect ourselves from the Electromagnetic Spectrum (the range of all possible frequencies of electromagnetic radiation) pre-dated the purchase of our homestead property. This concern was the main concern in selecting our home site, which was purchased in the mid 90s.

Our Land Purchase

We looked in an approximately 20-mile radius from our prior home in Appleton, WI, to find a property of sizable acreage on which to build our forever home and to create a private wildlife sanctuary. After years, we found it at W2797 Angling Road, Seymour, as it had about 65 acres, a legally "navigable stream" running through it, rolling hills, and areas in which wetlands had been filled and where there was further wetland potential.

The downside to us. . . was that the electrical lines were on our side of the road. Concerned with same giving us even more electromagnetic frequencies (hereinafter referred to as EMFs), we opted to build our home approximately two-thirds of a mile off of the road and away from these lines. This created significant added expense to us in burying the line that far and in constructing a driveway that long, but to lessen the EMFs effects, we believed it was worth it. (And continues to be worth the added expense of snow removal on that long of a drive and the constant expense of gravel repair.)

We would have never purchased this property if we knew your project would be coming through and near to us, never. We would never have entered in to this risk for our family.

Creation of Our Private Wildlife Sanctuary

Before building our home, we began to work on returning this property (which was being farmed) back to nature and to wetlands. It was our dream to restore the natural beauty and habitat that once was there, and then preserve and augment same. After considerable research, work, meetings, permits,* and significant expense and more work, we saw that dream to fruition. Our homestead is a Private Wildlife Sanctuary and Preserve, offering refuge and habitat to countless species through its now mature, and managed, prairie and six ponds and wildlife scrapes and wetlands, and maturing cover areas.

Award: In 1995, the U.S. Department of The Interior, U.S. Fish and Wildlife Service recognized our efforts by awarding us with the Regional Director's Partners for Wildlife Certificate of Appreciation for "Outstanding Contributions for the Restoration and Protection of Important Fish and Wildlife Habitats on Private Lands." Since this time, we have continued to take significant measures to manage the ponds and prairies. It is truly a wildlife sanctuary and

*These meetings and permits involved local, county, state, and federal agencies.

3 of 4

Preserve--home and habitat to countless species, including, but not limited to, Ring-Necked Pheasants (introduced and retained meaningful population), White-Tailed Deer, turkeys, Canadian Geese, various ducks, both indigenous and (outstanding) migratory, indigenous birds and super-outstanding migratory bird species, raccoons, foxes, fish, frogs (with a huge recent increase in population). . .

We would have never purchased and planned this wildlife sanctuary on this property if we knew your project would be coming through and near us, never. We would not have put ourselves at this risk, nor would we have put wildlife at this risk and spent such time and effort and money in restoring natural beauty in the pathway of your unsightly, dangerous, and frightening power lines.

Significant Health Risks for Our Family

Our biggest concern is our health. Since moving to this property, we lost several dogs to cancer, I have been diagnosed with Multiple Sclerosis, and our son was diagnosed with a life-threatening bone-marrow and autoimmune disease called Aplastic Anemia-his very life is an on-going struggle, and we believe one even more impacted by EMFs. We had our property checked for every possible hazard we could think of, EMFs being on the top of this list.

Regarding EMFs on/near our property, we were informed that they are actually lower than they would be if we moved to any of the alternate real estate we were considering which was close to our children's schools, and the hospital. Thus, we decided to stay here, and continue to invest in our home and our dreams on our property. However, we armed our family by investing in various EMF-protective devices. Blood microscopy tests we have had performed on our son have proven that his blood is better when he has the EMF protection, and stays out of high-dose EMF areas and in the relatively low EMF area of our property. Of course, your power lines would destroy that protection for him (and the rest of us).

We would have never decided to stay on this property after our son's diagnosis-and being advised that it was a relatively safe place to live regarding EMFs-if we knew your project was EVEN BEING CONTEMPLATED as coming by or near us. I cannot impress upon you the stress, and physical and emotional sickness, I feel at the thought of your power lines running through or near our property--and our sick child.

Home and Property Improvements made in Reliance of Safety of Property;
Huge Financial Detriment and Huge Financial Resale Detriment

After determining that our property was the safest choice to raise our children and continue to live our lives, we invested significant additional financial resources in improvements to it-including doubling the size of the house (with a remodel to the existing portions) to an

The saying goes "Don't worry about things you have no control over." After attending Tuesday's gathering at the Radisson, I wish that saying would apply but it doesn't. We came away more worried than we were before. We were told the only thing we can do is send our concerns to you and that you would read them. We can only hope that you will take what we write into consideration and then act on it. Our neighbors along Vanden Heuvel Rd are concerned as much as we are. We do not want this beautiful area destroyed by the eye sore of a substation. Our home is the biggest investment we have for our future, for our children and for our grandchildren. We were told our property value would not depreciate because of a nearby substation. We do not believe that for one second! Our family and friends love coming to visit us because we can enjoy the beautiful outdoors, walk along our country roads admiring the farmer's fields, the wildlife, and the serenity. All of that will disappear because of a substation, power poles, and power lines. Why not put all of this on existing busy roads where families and wildlife are not affected. We are concerned, we are worried, and we have no control!! All we can do is hope that you will listen to us. Please do not put the sub station on Vanden Heuvel Rd.

Cassandra Fischer and Randy Skinkis

We are sitting at our home looking out to the east. The sun is rising across the farm field giving us a good feeling of another beautiful day. It is difficult to imagine that someone is actually considering putting a 20/40 acre sub-station in this field and destroying the beauty of this countryside. What are you thinking!! You are looking at changing the entire area of Seymour by putting up a sub-station and power poles that aren't going to benefit this area in any way. I don't think you realize what you are doing to this small yet growing community - but then why should you care - you don't live here! You don't have to look at a sub-station and worry about the complications it might cause. You don't have a big power pole sitting on your property! What are you thinking? Please don't take away our farmland and the reason that all of us moved into the countryside. We do not want a sub-station or power poles on Vanden Heuvel Rd!

We recently went to the movie titled "Promised Land." It's about a big corporation that wants to send natural gas (drilling/fracking) through a little farming community. Their first job is to make these people believe this will be good for them and will not cause harm to their land, animals, or personal bodies. You may not think this story can be compared to ATC but the moral to this story can be applied here as well. We are all taught throughout our lives to take care of ourselves and what we own. We have been given life - we are taught daily how to take care of our bodies. We purchase land and build homes, farms, and businesses - We are taught to take care of these properties. SO - we take good care of all of these things for many years and then a big corporation comes along and all that we worked so hard to keep safe for so long could suddenly be in danger of being taken away from us.

over ->

Perhaps you should view this movie. How would you feel if your health and property were in jeopardy because of what a big corporation was planning to do? We on Vanden Heuvel Rd don't want a sub-station or power poles near our homes. Our health and property that we have cared for all these years are at stake!!

Recently we traveled through the state of Iowa along state highways and county highways. We passed more than three sub-stations along those highways and not one of them had homes anywhere near them.

We are writing to you once again on behalf of the families living on Vanden Heuvel Rd in the Town of Seymour. We do not want to see a sub-station constructed on Vanden heuvel Rd. We have families who have lived in this area for years because they love this countryside. We have young families who have moved here to raise their children in a good, clean environment. We have wild animals roaming our fields that have raised their young here. We already have to deal with arsenic and rust in our well water - disturbing the bedrock would only create more problems for us!! Please put your sub-station in an area where good people will not be affected - do not put it on Vanden Heuvel Rd! Thank You!

RE: Baylake Project

To Whom It May Concern:

Please allow this correspondence to represent the community which lives along the proposed substation along Old Hwy 29 in the Town of Pittsfield.

We have many concerns with the location of a substation in this area, from the aesthetics, human health, animal health, safety effects, environmental effects and economic loss of our property values.

We acknowledge that ATC will inform us that none of the above referenced concerns are legitimate. We are respectfully requesting ATC to acknowledge that there are studies which exist which contradict the studies ATC will reference to us. Please take this community's concerns into consideration when choosing the substation location.

Sincerely,

Pittsfield Community

I have some serious concerns about the proposed substation near Pittsfield - specifically regarding our neighbors farm and our property which lies directly across from it. If you select this option and require the 40 acres you discussed with us at the open house - you will pretty much "kill" our neighbors livelihood as they are a small family farm of only 100+ acres - and barely make enough crops on the land they have to support their cattle. Also - it would affect the health and well being of my small personal rescue of stray cats/dogs. We also have 2 very expensive show horses and have been/owned our property for 30+ years. With all the other options available, I think this substation site should NOT be considered. Property values in the area will drop considerably and there are plenty of homes in this area. We are 1-2 years from retirement - I lost my job 2+ years ago and we are trying to make it here -- Please don't jeopardize our property/value by selecting this site.

I Kevan Krahn own land within substation siting area H. (c830-1, c825-1)

Here are some points of interest.

1. *We sit upon a large area of irregular bedrock. In some areas it is exposed, or just beneath the surface of the ground. The consistency of the formation is inconsistent, and covers a large area north of Seymour, yet most people are unaware of this. Example...I was unpleasantly surprised some years ago while digging the basement of our house. An unexpected discovery of ledge rock quickly put a damper on our plans, as I had not expected it to be that close to the surface although I'd lived here my entire life. This bedrock is problematic, making construction, and excavating very costly. Bedrock outcroppings are common, and sporadic in our hilly terrain, and we have had to adapt special farming techniques to deal with it, and it limits our construction, and building practices. I would be happy to point this out to your engineers. The Outagamie County Hi Way Dept. discovered the rock when constructing Cty. Rd. Vv north of Hwy. 55 I'm sure they can attest to the problems.

Some years ago when I had dairy cattle I was told that the ledge rock in our area inhibits proper grounding thus I, and several farmers in the area have had to deal with abnormally high amounts of stray voltage. I eventually sold the cattle rather than deal with the stray voltage problem. Others however have engaged in legal battles over the matter. It is my understanding that this rock causes problems in the proper grounding of facilities thus it disrupts the natural flow of energy back to its source. There are several large dairy operations adjacent to this site that could be affected. Williamson Farms LLC. is a 1000 head dairy located just west of here that has already voiced their concerns.

2. *We have an extremely high water table, an aquifer that resides in the rock. This causes natural springs to occur causing water to seep onto the surface of the ground in various areas. This action is aggravated whenever the rock is disturbed, or removed. There are evidences of this on my farm that I would be happy to point out to you. The high water table, and evidence of springs are also obvious by examining a nearby stone quarry. Would surface water seepage be a concern when high voltage exists?

3. *There are arsenic deposits contained in the bedrock. In fact I was told that we live upon an arsenic hot bed. I have personally experienced this as our 1st well was condemned because of the high arsenic content of the water. I, and some other homeowners nearby have had to drill new wells, abandoning, cementing, and sealing off the old ones hoping to prevent the arsenic from leaching into the surrounding ground water. The new wells are steel cased from the surface through the arsenic deposits in an attempt to contain the contaminant. Could heavy construction, blasting, and rock removal disturb those existing arsenic deposits again causing contamination to other wells nearby? You may want to check with the DNR on that one.

4. *In light of all of the potential environmentally damaging, and costly construction problems associated with this area would seem to make it a poor choice from an engineering standpoint. Wouldn't the expansion of the North Appleton substation be more economically, and environmentally feasible considering the fact that it already exists? The engineers have indicated there is ample room for expansion at that facility.

To: Hovde, David
Subject: ATC

Subject: ATC Substation

I own over 200 acres in (substation siting area H), and (c830-1, c825-1) North of Seymour. Here are some important points to consider about this area...

- 1) Ledge Rock... This entire area has a large irregular formation of ledge rock. It makes construction difficult, and costly. We have had to adapt special farming techniques to limit erosion exposing the ledge rock in the hilly uneven terrain.
- 2) Arsenic.... The rock contains arsenic deposits. The DNR considers this area an arsenic hotspot. Many citizens including myself have already had to dig new wells because of the high levels of the contaminant. This is a very costly procedure, and we fear heavy construction, along with magnetic fields associated with high voltage could cause the arsenic which is abundantly present, to re contaminate the Seymour area well water.
- 3) Stray Voltage...I, and several other area dairy farmers have dealt with abnormally high stray voltage problems in the past. I was told by an ATC engineer that the rock located here inhibits proper grounding , and disturbs the natural flow of energy in the ground causing hot spots. Several area farms could be adversely affected. These farmers would surely consider legal action in the event a substation is located here, or if poles are erected. Note that the Legal system has been sympathetic to farmers with stray voltage in the past..
- 3) High Water Table...The high water table along with the ledge rock which is exposed in some areas produce springs, and water to seep out of our hilly terrain. A nearby stone quarry is further evidence of the high water table. There are places where the water seeps out of the rock, and if not for drainage tile there would be standing water present in many areas.
- 4) Wildlife Habitat....The spring melt, or heavy rain cause collection ponds to form attracting birds during their spring migration. One particularly large one exists on my farm. It's not uncommon to view Geese, Swans, Bald Eagles, Herons, Cranes, Ducks, and other water fowl here. People commonly stop to photograph, or just enjoy the view. A sub station, or power poles would be an eyesore, and ruin their habitat.
- 5) Aesthetics....County Road V V has a scenic overlook that is is one of the highest points in Outagamie County. When heading East over the hill between French Road, and HWY 55 people get a spectacular view of the Fox River Valley. In the distance one can see landmarks such as several Green Bay area water towers, Fort Howard, Scray's Hill, and the De Pere Ledge, windmills, and on a clear night the lights, and big screen at Lambeau Field are visible. People often comment on the beauty of this panoramic view. Locating a substation, or power poles in this area would destroy this natural scenic beauty for not only us who live here but all those who travel by.

Conclusion..

Expanding the current North Appleton site is logically the best choice from both an engineering, economical, ecological, and aesthetic standpoint. This is confirmed by conversations I had with

Bay Lake Formal Comments - Additional Comments by County/Municipality

several ATC staff. Here are the reasons...

1. You already own the land, and there is ample area for expansion thus you avoid potential legal battles, and other problems associated with obtaining new land.
 2. Nearby residents are already acclimated, and content living nearby a facility.
 3. Power feed input line, and existing equipment are already on site to be utilized resulting in substantial cost savings.
 4. Disrupting new wildlife habitat, farmland, and scenic areas are avoided.

(SUBSTATION SITING AREA H), (C830-1, C825-1)

Subject: ATC Substation

I own over 200 acres in (substation siting area H), and (c830-1, c825-1) North of Seymour. Here are some important points to consider about this area...

- 1) Ledge Rock... This entire area has a large irregular formation of ledge rock that is exposed in many areas. It makes construction difficult, and costly. We have had to adapt special farming techniques to limit erosion exposing the ledge rock that lies just beneath the surface in the hilly uneven terrain.
- 2) Arsenic.... The rock contains arsenic deposits. The DNR considers this area an arsenic hotspot. Many residents including myself have already had to dig new wells because of the high levels of the contaminant. This is a very costly procedure, and we fear heavy construction, along with magnetic fields associated with high voltage could cause the arsenic which is abundant, to re contaminate the Seymour area well water.
- 3) Stray Voltage...I, and several other area dairy farmers have dealt with abnormally high stray voltage problems in the past. I was told by an ATC engineer that the rock located here inhibits proper grounding , and disturbs the natural flow of energy in the ground causing hot spots. Several area farms could be adversely affected. These farmers would surely consider legal action in the event a substation is located here, or if poles are erected that could cause an increase in stray voltage.
Note that the Legal system has been sympathetic to farmers with stray voltage in the past..
- 3) High Water Table...The high water table along with the ledge rock which is exposed in some areas produce springs, and water to seep out of our hilly terrain. A nearby stone quarry is further evidence of the high water table. There are places where the water seeps out of the rock, and if not for drainage tile there would be standing water present in some areas.

1 of 2

- 4) Wildlife Habitat....The spring melt, or heavy rain cause collection ponds to form attracting birds during their spring migration. One particularly large one exists on my farm. It's not uncommon to view Geese, Swans, Bald Eagles, Herons, Cranes, Ducks, and other water fowl here. People commonly stop to photograph, or just enjoy the view. Subject: ATC Substation

Dear Dave,

I attended the Cicero Town meeting on Thursday night, and though I am not part of that township, I'm aware that certain farmers are concerned about the substation that could be located on, or near my farm just to the East on V V. I had earlier sent you the e-mail below, but you indicated at the meeting that you may have not received it so I am re sending it to you. Please excuse me if you have already read it as this is a duplicate.

I thought also to add this short introduction and thank you for attending the town meeting, and answering tough questions. Well done.

Please let me know if you received this email.

Best...

Kevan Krahn 920 833 7568

(SEGMENT O290-1)
(PROJECT AREA 1)

Please pardon this slow follow up to the October 9 ATC Open House at the Radisson Hotel. I appreciated the information provided and resource time given by your staff.

I very strongly oppose the new Bay Lake Transmission Line running through any part of the century plus Lake Homestead property for the following reasons:

1. There is no transmission line on the property now.
2. The 80 acre property is historically quite unique. Approximately 68 acres are under cultivation. The remaining acres contain the restored farmhouse and barn buildings, wetlands with a creek providing spawning areas for a variety of native fish, and a woodland with trails having potential use for education programs.

Due to environmental concerns and the considerable time and money invested to preserve this historic century family homestead, a transmission line would be most detrimental to future use of the property.

Thank you,
Terry Laske

P.S. If you would like to see the property, please call me at 1-920-725-9986.

2 parcels on O110-1

I HAVE THE SAME CONCERNS AS MOST PEOPLE REGARDING A POWER LINE GOING THROUGH MY PROPERTY. THEY ARE, THE HEALTH ASPECT, THE DEVALUATION OF MY PROPERTY VALUE, AND THE FACT THAT IT JUST LOOKS BAD. MORE IMPORTANTLY FOR ME AND MY FAMILY IS THE FOLLOWING. MY SON IS A PILOT IN THE AIR FORCE. WHEN HE RETIRES, HIS PLAN WAS TO PURCHASE MY PROPERTY AND PUT IN A CRASS STRIP FOR HIS SMALL PRIVATE PLANE. A POWER LINE GOING THROUGH MY PROPERTY WILL COMPLETELY DESTROY THAT POSSIBILITY. THIS HAS BEEN A DREAM OF HIS SINCE HE WAS A CHILD, AND ALL THE PIECES WERE COMING TOGETHER, THAT IS UNTIL THIS POWER LINE ROUTE MAKES IT IMPOSSIBLE. I SINCERELY HOPE YOU WILL CONSIDER ONE OF THE ALTERNATE ROUTES.

THANKS

Subject: Bay Lake Project

To who it may concern,

I was not able to attend your recent public meetings held in the area so I want to submit some concerns related to one

of your optional routes. I own property on the far south side of the town of Green Valley which is the old abandoned

railroad grade optional route. This old railroad grade runs parallel with HWY 32. I own the actual old railroad grade and

other property adjacent to the old railroad grade. This old railroad grade provides road access to the property I own

further off the town road. This property does not have other road access. Based on what I know, if this route was

selected it would result in a significant challenge for me to access this property as we planned to construct a home

adjacent to or on the old railroad grade.

Please provide feedback on this particular route.

Thanks,

Brad

Waukesha, WI 53187

RE: Baylake Project

To Whom It May Concern:

Please allow this correspondence to represent the community which lives along the proposed substation along Old Hwy 29 in the Town of Pittsfield.

We have many concerns with the location of a substation in this area, from the aesthetics, human health, animal health, safety effects, environmental effects and economic loss of our property values.

We acknowledge that ATC will inform us that none of the above referenced concerns are legitimate. We are respectfully requesting ATC to acknowledge that there are studies which exist which contradict the studies ATC will reference to us. Please take this community's concerns into consideration when choosing the substation location.

Sincerely,

Pittsfield Community

Concerns with Possible Sub Station 1-Mile from my property and over head power lines to & from sub station - If the Sub Station is located in the above segment - We would prefer single power poles and these power pole be located along Vanden Heuvel Rd on the West side of our property or along the property line on the East Side

(NOT locate power poles thru the center of our 80 Acre Property Because of the following:

We have always rented this land and will continue to do so for years to come - Also the complete 80 Acres is All Tiled. The Family House is occupied & located near the center of this property

12-7-2012

Segment M570-1 Farm property address W2352 Cty Rd VV Seymour, WI 54165

Why we don't want ATC Going thru our property

#1 We own the family farmland going on 70 years and the land is rented out, with being retired this is our only income to pay taxes, insurance and up keep of the land.

#2 My dad tiled this entire land and I don't want anyone digging up this land and destroying the drainage and future use of this property.

#3 the town of Seymour is zoned dairyland not residential and was not meant for anyone to come in and destroy our valued land for future farmers.

#4 We have many farmers milking cows, raising animals that could be involved by stray voltage and it impacts our livestock for years to come.

continued on back side of this page ->

#5 There are four 100th century farms in the town of Seymour that I know of if not more that should not be disturbed by ATC.

#6 My husband has a stimulator inserted and we are at the farm often and how do we know how that would affect the stimulator.

#7 We would be loosing valued farmland for future generations and as far as we can see you could look for a much better alternate route than to destroy our much valued farmland

We think following a major state highway 41/141 would be 100% better than affecting our farmland. We understand these power lines will be used to carry power to Northern, WI and upper Michigan where it will be used. - Not being 'used any where near our area.

I am writing to let you know of my serious concerns with the Bay Lake Project power line. My objections to the line are regarding the property values of my home and those of others in the surrounding area. Another concern is that of possible ill health effects to the residents living in the area. As this is a rural community, I'm wondering if these health issues would also affect farm animals, along with peoples' pets. I worry about all these concerns and truly appreciate your efforts to reroute the proposed transmission line. Thank you.

I do not want your transmission line to go through our property. My husband is disabled with a heart condition. Stray voltage will kill him. My son has started to prepare to build a house where your line would be. He already has the power and water to that section of our land. We have an owl that nest in our trees every day. I do not want you to destroy our natural environment of birds and wild life. Our pond has several varieties of fish, turtles and frogs. We see deer, fox, rabbits, possum, and other wildlife using our land as their homes. Please find a different route.

We definately don't want these proposed power lines going through our area, especially to proposed substation which is involving a portion of my property. This area is prime farmland. Why make a new route when there are already other power lines in existance and more direct routes. (Hwy 41/141 corridore). Why isn't a power generation plant being built in Michigan rather than routing electricity up to Michigan. We already have too many problems from stray voltage. Howard R Rettmann

We received your letter and went to one of the meeting listed. We are not interesed in selling our land nor will we ever be, we are family Dairy farmer's raising a, large number of dairy cattle and in very much need, all of our land for feed. with Oneida Tribe as neighbors we are able to find land to rent or purchase. We need this land for our manure management plan and have large investment in Drain field tiling also expected to hand this land to our son's. This land is in farm land preservation for a reason to stop developing also the Stray voltage milk cow's don't mix?

To ATC To whom it may concern - we received your letter and joined in on a meeting at the Radison in Green Bay. We are not interested in selling our land nor will we ever be, we are a Family Dairy Farm in Seymour, WI we raise a large number of animals and show through 4 H in Outagamie County we are in very much need of all our land for feed, bedding and pasture, and Manure management plan. We have invested in drain Field tiling and keeping the land clean. Our parents were driven off their land when is it going to stop our Country needs Farmers. Oneida Tribe are our neighbors so it makes it inpossiable to buy or rent farm land. There are gravel pits all around our land we know theres plenty of money to be made, as stated we our Dairy Farmers we expected (want) to hand the land down to our children. We our proud of our Farm and land in Northeasten Wisconsin. Upset Dairy Farmer.

I don't believe it is good to put the Hi Line in the Seymour Area. We had a previous experience with a neighbor here that had the Hi Line come through his land he had a big problem with stray voltage in his barn and it wasn't good.

Also I believe that magnetic field this line would create can effect your heart. I have an aortic valve replaced and a few stints put in.

Hope you take this into consideration.

Yours truly

Louis Rynish

I don't want these lines on our property, go on your existing route. We have children who are going to build here someday. If you can't go on tribal land, and only white people's land - discrimination!!!

We have lots of wildlife in this area. We have an eagle nesting, power lines will kill it!! There are lots of farmers who depend on their land. Stray voltage kills cows. Go back to your drawing board -

If your improving electric reliability in Upper Michigan. Why don't you put the sub stations in that state. Why do you have to drag it all across the whole countryside.
Don't want it on my property!
Too much farmland around here, to be wasted on power lines.

Build a power plant in Michigan! We need our farm land. How do you expect people to make a living, if you disrupt everything?
Truly, ATC sure has the money, why aren't you helping the people on the East Coast, who don't have any power?
I guess it boils down to the almighty "buck or money", who cares about people!

We only have one main comment regarding the possible substation on Vanden Heuvel Rd. We do not want it!

I have lived on this beautiful piece of property for almost 40 years. My husband and I have put \$80,000 worth of improvements into our house and yard in the past 4 years. We sit out on our front porch and look at the beautiful view of farmlands around us. Why would we prefer to look at a substation? Why would we want our property value to go down because of a substation? We don't!! We recognize the need for substations but why put them where people are already living? It looks like the tribal lands are off limits. While we don't fully understand why - there still is land available where there are no close residences. Surely you can understand our feelings, and we hope you take them into consideration.

In 2000, we found out that there is a presence of arsenic in Wisconsin's drinking water supply. Outagamie County has the highest concentration of this arsenic. Our well water has been tested and we are one of the many residences that has a higher percentage of arsenic in our wells. We have, therefore, had to find alternative ways to get pure and clean water. We understand that disturbing the bedrock in this area may release even more arsenic into our ground water and that will be drawn into our wells. How can you be positive that building a substation and/or putting up power poles in this area will not further disturb the bedrock and, therefore, cause even more arsenic problems? We are concerned!! We have all worked hard to keep our families from being exposed to an unhealthy environment. Please consider putting the sub-station and power poles in an area where the bedrock will not be affected and our beautiful countryside will not be destroyed.

Just because the holiday are here doesn't mean we have forgotten what you are planning for the Town and City of Seymour. We have many reasons for keeping the sub-station and power poles away from Vanden Heuvel Rd.

- 1) Digging in this area will only further disturb the bedrock and create more arsenic and rust in our well water.
- 2) There are many health concerns. We know that the humming/buzzing from the sub-station and power poles is enough to drive anyone crazy-and would cause us to move. No new families would move into this area.
- 3) With that in mind, who would want to buy our house if we should move? Would you want to live across from a sub-station?
- 4) We have lived here for 40 years and have put a lot of money into our house and property to make improvements (many of our neighbors have done the same). Most certainly our property is going to depreciate. Are you prepared to compensate us for our losses?

over ->

yes, there is more!

5) On south Vanden Heuvel Rd there is underground waste water that is pumped from the canning company in Seymour. and sprayed onto the fields. Why would you consider digging where there are underground pipes?

6) There must be a more direct route up north that would follow along a major highway that makes more sense than going through the countryside and farm land around Seymour! We are sure there is!!

7) The wild life near us will leave. We have seen deer, turkeys, swans, geese, fox and many small animals in this area. If people can't live with the sights and sounds of a sub-station - What makes you think that wildlife will? Do you care??

8) Why do you think families move into the country? You can be sure it's not to live near a sub-station!!

Why not use already existing routes for your poles and sub-station instead of ruining more of our rural areas!! Listen to the people of the Town and City of Seymour. We don't want you on Vanden Heuvel or in this area!

Message:

We recently went to the movie titled "Promised Land". It's about a big corporation that wants to send natural gas (drilling/fracking) through a little farming community. Their first job is to make these people believe this will be good for them and will not cause harm to their land, animals, or personal bodies. You may not think this story can be compared to ATC but the moral to this story can be applied here as well.

We are all taught throughout our lives to take care of ourselves and what we own. We have been given life...we are taught daily how to take care of our bodies. We purchase land and build homes, farms, and businesses...we are taught to take care of these properties. SO..we take good care of all of these things for many years and then a big corporation comes along and all that we worked so hard to keep safe for so long could suddenly be in danger of being taken away from us.

Perhaps you should view this movie. How would you feel if your health and property were in jeopardy because of what a big corporation was planning to do? We on Vanden Heuvel Rd in the Town of Seymour don't want a sub-station or power poles near our homes. Our health and property that we have cared for all these years are at stake!!!!

Subject: Bay Lake Project Comment

Dear ATC:

My name is Jon Stellmacher and I live in Appleton, Wisconsin. Thank you for this opportunity to offer

input on the impending Bay Lake Project. I attended the May 14 open house at the Radisson across

from the airport in Green Bay with my father and brother. There we spoke with several of your staff members, including Tom Schemm.

This letter is written primarily in hope that the transmission lines and substation would not be located

on our property. However we also respect your development process and will look forward to the results of this phase of study.

For background, I own approx. 42 acres on the northwest corner of section 8 in the Town of Seymour. The property borders State Highway 55 and Cicero Road. My 90-year-old father lives on this land which has been in our family for over 135 years. It is this heritage of long-term family ownership, along with the small size of the parcel, which makes us most hopeful not to lose a relatively large portion for the sake of the transmission lines or substation. My brother Chuck owns 25 acres adjacent to my property, with both of our parcels derived from the original 70-acre farm purchased by our great-grandfather in 1877.

It's possible you would find this land unsuitable for geological or scientific reasons. On one corner of

the property is the end of what was once referred to as the rock ledge than ran north from Seymour. And through the main part of the property runs a creek bed. This land is tiled and used for

crops, but in times of heavy rain, such as we experienced on May 3, water runs above ground so that

the entire creek was visible angling across our farm property.

We don't have any claims to uniqueness other than the long family history on this land. However we

wanted to express this hope that perhaps others will be more interested, or better yet, that from your

perspective this is not a suitable site. Nevertheless we thank you for your consideration of the sentimental value of this property to our family.

Sincerely,

Jon Stellmacher

Subject: Bay Lake Project

Greetings,

I live in Appleton but own land on Highway 55 four miles north of Seymour on which my elderly father lives.

We saw a short article in the newspaper last week indicating options for the new transmission lines had been narrowed to two routes. There is no new information on the main portion of the project website home page, but upon clicking on the "Project Map" link in the right margin, I found a map dated April 4. Is this indeed the official map? It appears our property is not on either of the listed routes.

Have remaining affected property owners already been notified and since we have not received any new information via U.S. mail, can we presume this signals we will not be affected?

Thank you for any information you can provide.

RE: Baylake Project

To Whom It May Concern:

Please allow this correspondence to represent the community which lives along the proposed substation along Old Hwy 29 in the Town of Pittsfield.

We have many concerns with the location of a substation in this area, from the aesthetics, human health, animal health, safety effects, environmental effects and economic loss of our property values.

We acknowledge that ATC will inform us that none of the above referenced concerns are legitimate. We are respectfully requesting ATC to acknowledge that there are studies which exist which contradict the studies ATC will reference to us. Please take this community's concerns into consideration when choosing the substation location.

Sincerely,

Pittsfield Community

Comments:

I am opposed to the Baylake transmission line project. My property is located in segment 0100-1. The reasons I'm opposed to this project are the wetlands that they are going through are very important for our ecosystem. These wetlands provide habitat for many species of animals. We have sand turtles, snapping turtles, frogs, muskrats, ducks, geese, fish, deer, aquatic insects, etc. These wetlands are used by bald eagles, red tail hawks, owls, and other predators for providing them with food. These wetlands also provide for nesting areas for ducks and geese, and a resting area for them when migrating in the spring & fall. My ponds are also used for family recreation & these highlines pose a health risk to my family. The proposed plan should follow the existing corridor A500-1, A510-1, A520-1 on the west side of Seymour, so the city of Seymour won't have highlines on the east & west side of the city. By going on the east side of Seymour ATC will be crossing prime farm land & disrupting that many more peoples properties. ATC should follow the existing corridor on the west side of Seymour, or better yet go up highway 41, so you are'nt affecting all this prime farm land. I don't understand why Wisconsin has to provide power to Michigan & cause all this grief for the people hear in Wisconsin.

Segment O100-1 & Segment M200-1

I would like to tell you that we do not want these power lines or substations near or on Vanden Heuvel Rd or Gardner Rd by Seymour WI.

Here are just a few reasons

- * the lines & substation are a health risk to all who live by them.
- * they are to interfere with our lives on all levels, we cash crop.
- * they are a health risk to cows.
- * there is an eagle that has been here for around three years now.

(signed)

Segment O100-1 & M200-1

Thank you for giving me this venue to voice my concerns of your project. I as well with numeras neighbors opposse it for many reasons. Most of us farm and have livestock we have cared for all our lives we feel this could threaten our livelyhood. Are there other ways to accomplish your goal? How does this affect our properties value? What health risks are there. Will it affect people with pacemakers? A nursing home is within a half mile to the west. No one wants to look out the window and see High power lines. How does this affect wild life many birds and animals thrive on and near our farm. there is an eagle that feeds here. Thank you

Here are a few signitures from people who do not want the lines on Vanden Heuvel Rd or Gardner Rd by Seymour, WI 54165. Segment #s to include M200-1, O100-1, O235-1, M555-1 & M560-1.

There are all small farms up here. We make our living mostly from our farms. We have alot of milk cows & you know that doesn't mix w/ electricity. We have eagles acrossed from our house by Stingles ponds too.

There is a nursing home within a half mile.

We the undersigned want to make it clear that we are opposed to routes near the VandenHeuvel Road and Gardner Road area for the transmission lines being proposed by ATC.

AREA O110 on your Map

To whom it may concern

Your project concerns us for the following reasons.

We live on the O100 area along Cemetery Rd. our house and the neighbors house is almost 1/4 mile of the road, the way your lines are drawn it could be right in our back yard. The ground is all stone, there is also an old quarry buried decades ago along your line.

Other concerns 1) we have very good well water, if you damage the well, how will we be compensated as we assume blasting would be needed, 2) we have a very nice home and would probably lose at least 50% its value, no one wants a big power line in their yard. how would this compensation be determined and who pays. 3) Stray voltage 4) Health issues and who will be responsible. Why would you even consider this project it does us no good. If Michigan and Upper Wisconsin need power build a plant up in Michigan or Upper Wis

Thank you.

I suppose no one wants a substation in their backyard and our rural areas are built up with many newer, often quite expensive homes. It maybe difficult to site a substation in a less populated area so close to Green Bay. However, I would be really disappointed if you went forward with proposed Substation Siting Area H right on the border of a subdivision of pricey homes. You know those homeowners did not envision that in their future. (I have no vested interest in the subdivision but the planning that went into it and the home/population/tax base density, I think argues it merits special consideration.)

Segment M553-1

I attended your informational meeting on 10-9-12 at the Radisson in Oneida & learned that the proposed power line could run down the center of 13 acres that I own. This small piece of land has been in my family for over 5 generations, and is where my daughter & family & I plan on constructing 2 homes. The driveways have been put in & the land perked. Please take this into consideration when planning the power lines.

Sincerely

Pamela Zak

We have a large pond next to our house that the DNR has said we can't touch. It is part of the Pensaukee river & communicates with a neighbors bond via a culvert under the County Road. We have a very small property & any structures would compromise what we do have here. We are concerned about the environmental impact construction would have on this area. We would prefer you pick a different corridor with less impact on the environment.

I understand the need for moving electricity.

There is also nothing beautifull about a transmission line running throu fields & woods. My recomidation is to stay along major highways county & state, railroad grades etc. Its easy access for yor crews and keeps our rural areas clean looking.

Whil I realize new transmission facilities are needed, I also know first hand the negative affect they can have on land owners. My wife and I tried dairy farming for 10+ years, while battling STRAY VOLTAGE coming in on the primary neutral from our current provider. Even after we re-wired our farm & installed an isolation transformer, stray voltage is still detected. We were forced to sell our cattle and find off-farm jobs. Because of this, I don't want to see transmission lines anywhere near my property, unless you want to purchase my property so that I can move far away.

Thank you.

I am in the process of starting a small business. I am currently stargin a wholesale nursery of trees & shrubs. I have been planting thousands of trees for the present and furture of my business. I do not own much land but, the land that I do own I need to use every bit of it for seedlings. I am going to have issues with these porposed electric transmissions. If these come onto my property. I plan within a curtain distance of these powerlines. loosing this land could realy hurt me & the future of my new business. It would be greatly appreciate it if you would look into a alternative route for your powerlines. If you have any questionsor comments please call or email me at the given information.

Thank you.

TO YOUR COMPANY IT'S JUST ANOTHER PIECE OF LAND TO PUT POWER LINES ON. TO MY FAMILY AND I ITS WHERE MEMORIES ARE MADE. NOT ONLY IS MY PROPERTY EXCELLENT FARMING LAND, BUT MORE IMPORTANTLY IT IS A PLACE OF TRADITIONS. STARTING EARLY FALL, MYSELF, WIFE, SONS, DAUGHTER, IN LAWS AND GRAND CHILDREN RALLY TOGETHER TO GET READY FOR DEER HUNTING. I UNDERSTAND WE ALL NEED POWER, BUT WHY NOT FOLLOW THE EXISTING POWER LINES. THEY ARE ALREADY THERE AND WILL NOT AFFECT MY PROPERTY AND NEIGHBORS

Find somewhere else to run your lines. Don't want them that close to my property.

Don't understand if its enconomically safe for wildlife or my family. If my opioin even matters you guys do what you want anyway. I disagree with this whole thing.

In regards to area R275-1

I am very concerned that the Mountain Bay Trail is even being considered as a potential corridor for project1. Placing the line anywhere near the trail will definitely destroy the reasons people use the trail - nature. I pass the 345KV line in Green Valley and it is the dominant feature of the landscape. This line near the trail would destroy another natural area. In addition, to experience the quiet of the trail. This line takes that from those home owners.

My family and I do not wish to have another power line near our property. I have lived here most of my life and saw the removal of the power lines that had been placed across my grandfather's property. Now there seems to be an effort to put another set of lines, possibly in the same location, back onto the property. Not only would it lower land value and take away aesthetically from the view, there is the risk of stray voltage and I am opposed to it unless it follows an existing path with fewer implications.

Thank you.

I think our biggest concern is that if these power lines come on our land or even next to our property, that it will reduce our property value. We own 2 acres on County C (C1280-1) Also we have some trees we planted by edge of our property. We grow these blue spruce with the intent to sell them. If the lines will go over this property will we have to Kill all the trees or would you help relocate them?

Thanks

Every time we get an update you keep getting closer & closer to our home. Now I'm getting concerned about the stray voltage, etc.

I can see by your map in Area #1 around Angelica that most of the work will be done along County Roads and Highways. As I think you would have easier access to the land and therefore save some money. However, the P160-1, P400-1, P120-1, M310-1, M320-1, P170-1, P280-1 does not. Why is this cutting through many fields and homes. Why arn't you going straight up Hwy 32 and over to Morgan along dudzik Road. Wouldn't that be more logical?

I was unable to attend the scheduled meetings for my area. I would like to know what kind of environmental(1) impact these lines will have on this area. Are there environmental impact studies done? Can you make those available to read on the internet, please? (2) Are these lines going to be built over private property? How much disruption will this cause on private property and along roads? When will these occur? Where? For how long?
(3) What benefits will this bring to our area? What services? Jobs?
I will be checking your website for more information but I prefer written material which I can take time reading.

We went through before about 15 yrs ago. Our concerns are:

- stray voltage
 - Thils will be going through the back yard of a new residential neighborhood with small kids.
 - Tjere os a;readu a gas corridor in place that could be used without having to erect tower and lines labeled G141-1 to G115-1
 - R270-280 would go thru Krakow and Green Vally. Populated

I'M HAVE TWO CONCERNS.

1) THE VALUATION OF MY RESIDENTIAL PROPERTY BECAUSE OF THESE POWER LINE FOR A COMPANY TRYING TO MAKE A PROFIT. I WANT THE ABILITY TO BE SELL MY PROPERTY FOR WHAT IT IS WORTH. THESE POWER LINES WILL LIMITED THE SELLIBILITY AND VALUE OF MY PROPERTY.

2) THE HEALTH RISK ARE ALSO A CONCERN. STAY VOLTAGE HAS NOT PROVEN TO CAUSE HEALTH PROBLEMS. BUT IT HAS BEEN KNOWN TO INCREASE HEALTH PROBLEMS ALSO.

HOW ARE WE GOING TO BE COMPENSATED FOR THIS FOR PROFIT BUSINESS. MY PROPERTY WILL LOSE VALUE.

David:

I received a mailing on Wednesday regarding the Bay Lake Project.

We moved to get away from the transmission lines and still own hunting land in Green Valley.

Now to our dismay one of

the proposed routes is by our new home.

Can you please send us a clean map which we can read better to ascertain how close this proposed route is to our home.

We would also like information on what the preferred routes are at this time.

Please don't tell me to attend a meeting as I don't believe we will be able to attend a meeting.

Thank you.

We have spent a lifetime accumulating prime farming land in Brown, Oconto, Outagamie & Shawano Counties. As first generation farmers we needed to be very efficient in order to be profitable. Powerlines that cut through our fields have a disproportionately negative effect on our efficiencies. They also prohibit us from installing Pivot Irrigation on our lighter soils & eliminate a lower cost option for distributing our digested effluent. We've invested over \$~1 1/2 million at our Green Valley Dairy which is showing a very poor return. We are hoping to install more pivots to help the economic of the digesters. The Utilities have recently put up many road blocks to our Renewable Energy efforts and I don't want to put up with their power lines. For the long term benefits of agriculture please put these power lines along the road ROW where they belong and out of our fields.

We attended the open house on Oct 11 in Oconto Falls. and learned our farm is still on a potential route. Also found out they would be installing 2 poles this time at each setting and acquiring 300 ft more if it would go through here. This is after we finally got rid of double posts at each setting. We feel this is too much electricty too close to our home and would be a hardship to work around more poles again. Please consider our reasons for objecting to this route

A girl called me late last week and wanted to know if I had any questions about some transmission project from the notice I got. I said I had never gotten a notice. She said that my home could be affected and that there were meetings. I asked when the meetings were. She said she didn't know, but that they would be in the packet I would be receiving shortly. I just got the information and meetings in my area have already been done. Every question I asked her she didn't know. I know good help is hard to find, but she sounded stupid. If this affects my property, I would like someone to call and explain what will happen.

We object to bigger lines - we have trouble with stray voltage on our dairy farm. Even when the fence is off, you can get shocked if you touch the wire fence. I hate to think what this is doing to our cattle and our health.

The EMF field is too dangerous to us also. What about us who have to have these lines on our property? What will be done? There is no compensation for these lines to be on our property.

Put them underground if you really care about our health.

Well we have alot of birds like Great horned owls and such. Just wondering about affects on them and other wild animals. Also the map shows the yellow coloring over half of our land and how it will affect our horses and other livestock. like the buzzing on the lines and also if it goes through how it would affect if we would want to sell nobody will want to buy a house with big power lines over half the land.

We completely missed the open house, and would really like to know how this will effect our heat, our reception, our electric bills, our animals health, as well as where exactly is the placement of the poles as well as which side of the road. This is not sitting well with us, and your open house dates sucked, I think we should of had town hall open house meeting places, and times that worked for everyone.

A power line from Green Bay to Morgan should go from 41 North to 141 or West 29 then 32 North to Morgan Please do not place the lines on 47 South of Bonduel because it is way out of the way and there are too many homes near the Hwy. I do not want power lines over the top of my home.

Please keep me informed on the decicion.

April 12th, 2013

Update:

We just found out the project is not going thru our area, but I still wanted to mail this letter to you, because some changes need to be made in what the value of peoples lives are, not just the value of what you tell us they are, and what their properties mean to them.

The so called improvement progress, that people say we need, should be really looked at, and consider the people's rights, do they want to give up a piece of land, and if they have to, be given a more than fare price, like double or triple the amount of what its worth. Because people forget that the land people have is what they worked hard to get.

I still feel very strongly against this project, and others that will come up in the future, because so many people are being affected by this, and they are not happy about the outcome it could have.

This seems to be driven by profit, and most projects are! not by what is really needed.

People seem to forget, what is the different between a need and a want.

And also cause and effect! Everything we say and do, has a cause and effect.

I am for progress, but we need to show a really good reason for it, when it effects other people's lives and their homes.

Thank you for your time, and good luck to the future.

Cyndi

Subject: American Transmission Company, Bay Lake Project.

This project is a High Voltage Power Line, a 345 Kilovolt line and a 138 Kilovolt line, two separate lines, on separate poles.

We re-side in the Town of Lessor, in Shawano County, WI.

We have many concerns about this project that might be going thru our Town.

Some of our residents are not happy with high power lines going thru there properties, and We as a Town have a lot of concerns about our future growth, and our Park Area, our Wilderness, and the many people and their properties that this project effects.

We don't want to stand in the way of progress, But, this so called progress will halt our future progress of building in this area, and cause a hardship, not only to our town, but a lot of the town residence who do not want these lines in there front and back yards, this will destroy all the hard work and money into their properties, not even counting all the tree's this project will destroy, including our Moeller Ridge Nature Park.

The biggest burden is on the many of property owners that have bought, build, and made their homes in the country a little piece of paradise for themselves.

At what expense! Do you See Progress? We feel it's at the homeowners, property owners and

the

Town of Lessor's expense. We know the Town gets a kickback, from this project, and ATC are willing to pay for the Government part of the ATC lines, but not much to the property owners for years down the road. (What happens when the town doesn't care for this project either?)

This project of the high voltage line is being brought up at a lot of our town meetings! There is no price tag on a piece of property that someone put a lot of time and effort into making it their home. The price you pay people for this easement is way too low, and needs to be reviewed. This price should not go on what the going price is for land, it should be based on what that property owner feels, and if the property owner is willing to give up a piece of their property, and at a price the property owner feels is reasonable.

There are some people that are ok with these lines going thru their properties, you need to seek out these people and work with them. If a property owner says no, no should mean no. There are other routes you could follow that already have easements on the land, why not follow these routes again.

All the people that "rubber stamps" these laws should live next to all the so called improvements of progress.

If we cannot stop this from happening, at least we could be compensated a lot more than what the land is worth to the American Transmission Company, because our land is worth a lot more to us than it is to the ATC, This larger compensation would also account for them diminishing our property values!

The values can be different to everyone, sometimes the farmers don't mind the lines going their land, because this can be more income for them, and they can still work the fields! But most of the time, people value their houses, and the little bit of land they have.

We should not have to put up with losing our property values, and our hard work into making our property a place to call home, and a lot of people worked so hard thru out the years to get this and for what reason? All because of the so called progress! We need to really check into this progress, and really see how much is needed? And for where the locations should be? This should all be done before devastating the people and their communities.

This is America at least it's suppose to be, the land of the free, Where is the free, when we are forced to give up a piece of our land with no say in the matter, and who benefits from this? Not us the people, not the residence, nor the property owners. The American Transmission Company benefits the most, we feel their approach is profit driven, and don't care about permanently diminishing property values, people's values, and they don't care about the country side aesthetics and overall quality of life we have. This feels like a monopoly and we the people really don't have much to say when they want an easement of your land, they will find a way to take it!

We are always being told we should not stand in the way of progress, but it's time progress finds a better route to the decisions that are being made.

Thank you for your time and we hope we can all get along and make decisions in our world of America we all call home.

Please help us so we can have a future for our children, a place where we can really call home, something that is ours, and can not be taken away, and something we can leave behind that is a peaceful place for the next generations to enjoy, and in this case not a place that is full of high voltage power lines.

This is not just our town residence that feels this way; many of our neighboring towns and residence feel the same as we do. A lot of people are in an uproar over this project!

Maybe this should tell us something, the people really do care what happens to the land and to our future!

There is a time and place for Progress, but when you interfere with the country side and us folks who live here, and work so hard to keep it country, please remember we moved here because we don't want to live in the city.

Cyndi LuMaye
PO Box 64
Nichols, WI 54152
phone number is 715-758-7585

My physical address is W4004 State Hwy 156, which is on one of the 3 routes in the picking.

I am also the Treasurer for the Town of Lessor, so I hear a lot of the concerns that the residence have.

Also enclosed is a copy of the Town of Lessor Position Statement.

Town of Lessor Position Statement
Topic Highline Power Distribution

It is the Town of Lessor's position that before any additional land and infringement upon the town's residents and businesses for purposes of power distribution corridors, the following criteria be met:

1) Additional distribution is contained within existing corridors until said corridors are utilized to 100% capacity. Changes including line additions, structure changes to hold power lines are considered acceptable, providing there is proof of need to support the changes.

2) Town of Lessor rejects additions to land right-of-way, extensions, or added corridor space until such time that proof of need is provided by means of a comprehensive report or equivalent supporting such necessity before any consideration, approval or recommendation by Town of Lessor board members. Any and all information regarding proof of need shall be provided to Town of Lessor residents and businesses, followed by a town hall discussion, motion for approval and board approval.

Without the above criteria, it is the Town of Lessor's position to strongly reject the ATC "Bay Lake Proposal" as proposed.

The Town of Lessor believes the ATC "baylakeproject" approach is profit driven with disregard to a "least intrusive" approach which will only degrade the Town of Lessor as a whole by permanently diminishing property values, countryside aesthetics and overall quality of life.

Whereas, the town of Lessor Board strongly objects to the transmission route being considered by the American Transmission company for the Bay Lake Project, because it will prohibit future growth, and be devastating to the residence and their properties, which will be devastating to the economic development of our community.

American Transmission Company
2 Fen Oak Court
Madison, WI 537914-8614

S0525-1

October 24th, 2012

Our names are Dan and Cyndi Lumaye, our address is W4004 State Hwy 156.
We are in your S 525-1 area.

We went to your meeting in Oconto Falls, and of course we are like many others, we do not want to see the power lines in our property. I do have to say one thing; you did put on a good open house for concerned people. And I realize this is a hard project for you.

I did some research on our area, and We ask you, why would you pick our side of the road, where there are houses, and we do not own a lot of property, where on the other side the south side of the road there is no houses, except one on the corner of highway 47 and highway 156. From old 47 to hwy 47 on hwy 156 where we live, there is 5 houses on the North side of 156 and on the south side there is 1 farmhouse on the corner of hwy 47 and 156. Where you could easily go thru the farming land, and not go thru our properties. Farmers are always looking for money, this way they can get paid, and still plant and work the land, where houses, this just take the land away, especially the owners of property that don't have much land to begin with, it took us a long time (almost 14 years) to have what we have, with a lot of hard work, yes work we did ourselves, then in a instant you want to take it away. This is America, the land of the Free. What happened!

Its bad enough we have to pay high property taxes, and then you want to add ugly power lines. The value of the land is not the same with power lines going thru it. We understand the economy needs to keep updating, but you need to do it without interrupting people's lives, and what we created, and what we stand for, Country Living, and Nature. We built our piece of Paradise, and we will do everything we can to keep it this way.

We hope you can find the farm land, where you do not have to invade people's personal property. I have talked with a lot of people on Hwy 156 and we all fee l the same way, there is enough land that farmers use where nobody lives on that can be used to get your lines where you want them to go. Please consider these routes, instead of people's small pieces of property you want to destroy.

You claim farmers can still farm the land under the power lines, but yet you want to take away some of our land, which we had since 1999 and started planting a lot of trees, we made our area a great place for Nature, and birds and animals to call home, since we took some of their land when we built our house, we let some of ours be an area where they can still call home. We let it all grow up, planted a lot of trees, and the nature back there is wonderful. We only have under 10 acres this includes our house and pond also, and we worked hard to get it to the point of where it is today. We looked at many of properties, when we bought this, we could have even bought some with power lines going thru it at that time, and we did not want it, just like many other people do not want power lines going thru their properties, why don't you stay with all farm land then. Since farmers can still plant crops on it, and use it. But with people like ourselves we cannot even have trees on it. Besides that, if you take away peoples properties, that don't' have a lot of acres, we cannot sell it at a good price. Because of the area you would take and use for your purposes. This

Bay Lake Formal Comments - Additional Comments by County/Municipality

is not how we spent the years and our money to have our land turn into your power line area. This is for the nature life and our country living life. If I wanted power lines I would have stayed in the city, we did not like the city, both of us are from the country, and we would like to keep it that way.

We Paid a lot of money to have our power lines all under ground.

We will not give in easily to you for you to put your power lines over head, when we try very hard to save our wild life area, and keep everything under ground. Besides that, why would you want to take this all away, from the country people?

No matter what you say, your power line would decrease our value, because of everything we put into making it a country home, and a wild life nature area.

We built up our area, and since we built a house, we let our back area grow up with wildlife, and we planted a lot of trees back there, With the different kinds of trees and wild life this is a place where a lot of nature critters call home, and I always say, when I plant a garden I plant enough for everyone, meaning all the animals also.

Our back area is a big asset to our property; we cut paths thru our area, so we can watch the wildlife we help to save, this is a relaxing way to stay healthy, walking and watching. As you can see with the photo's we enclosed with this letter, why we feel we have a very special place. And threw out the many years it took to get it this way, I am sorry to say, we will not sit quietly and let the power lines take it away.

I know you all have a big task ahead of you, and I realize this is an important project. But please research your area's and try to find a way to make all parties involved ok with the outcome, like a suggestion, using farm land and fields for your projects.

Right now, you have a lot of angry people in our area, and some of this; my opinion never had to go into people's small pieces of paradise, that people call their homes.

Please consider the areas of the people's houses, to where you want to put your power lines, and try to avoid them at all cost, because we the people worked hard for what we call home.

If you have any other questions for us, please call or write.

I have called you also, and I check on line for any updates, But I think it's also wonderful the way you send out the letters to inform everyone. Thank you very much.

I am like many others, I understand we need to update with new technology, just not in my back yard.

If I can be of any more assistance please give me a call or write me a letter.

Thank you for listening to all of our concerns, and we really do hope you can build your lines in farmers fields, not by people's houses. I know this area is not set in stone, but I wanted to let you know how we feel.

Thank you again, and if we can be further assistance to you, and our area, please call.

Cyndi and Dan LuMaye (W4004 State Hwy 156)

I am looking at your interactive map for project Area 1. Am I correct in reading it that the transmission lines will go north from Black Creek ALONG Highway 47 to Highway 156 and then east ALONG 156 to Highway 29? Or are these transmission lines going to be cutting across private property away from the aforementioned highways?

Thank you.

Bob McDevitt

We do not want the power lines going through our land. We have a severely disabled child who reacts allergically to numerous conditions. She practically lives in a bubble within our home. She even is allergic to water. Any construction or digging would cause her to react. We have to advocate for her in this situation. As property owners, we also are against placing electricity lines on our property that would serve Michigan. We were unable to attend the open house in our area due to medical appointments. We do not have e-mail but would like to be informed about future considerations by mail. Please consider the health affects this proposal would be on our family.

I and Beth are very sad to hear that you are proposing to use our land to install the high voltage lines.

We planted 20,000 seedlings with the intent of enjoying our land and giving it to our children some day. These trees are now 15' - 20' in height. Your project would eliminate thousands of our trees and ruin our land forever!

There is open land to the South with few houses...why isn't that considered?

Yes I would like to receive updates on the progress of this project. I am extremely concerned as when I spoke to a gentleman asking for permission to survey my property he told me they are considering placing the ATC line on my property line and would need approximately 200 feet for easement split among my neighbor's and my property. My lot is only 200 feet wide so that would mean the easement would "take away" 1/2 my yard which would include my house. That makes me very concerned.

I thank you for your previous quick response.

regarding Segment S450-1

We would like you to build a Power Plant up North where they need the power and eliminate the ugly transmission lines. Why should we have to look at those ugly lines and also the unhealthiness of them all. Is this what we call Democracy or is it more like Communism?

It's been so noisy since the State took about an acre and a half of our wooded land already with mature trees, some older than 100 years to build Hwy. 29 four lanes. Another time the telephone lines took more trees in our frontage, now our home value is down and the noise is awful. We think the lines look ugly and don't want them on our land or near us. Plus we look to the South and there is a ugly cellphone tower.

We heard that lines were to be routed through Green Valley and Morgan, but the route was eliminated because of the school nearby. Now, what is that telling us?

Sincerely,

The Gutzman's

Regarding Segment S630-1

My property is on the So side of hwy 160. I have concerns about the safety of these poles and their magnetic field. I have a pace maker and a defibrilator and need to stay at a afe distance. No one at your open house could prove there would be no stray voltage or problems from the magnetic field. My 28 yr old son lives in Angelica & he too has a pace maker & defibulator - so you can understand our concern about the power poles being too close. We are nervous as to where the route of the poles will be.

RE: Baylake Project

To Whom It May Concern:

Please allow this correspondence to represent the community which lives along the proposed substation along Old Hwy 29 in the Town of Pittsfield.

We have many concerns with the location of a substation in this area, from the aesthetics, human health, animal health, safety effects, environmental effects and economic loss of our property values.

We acknowledge that ATC will inform us that none of the above referenced concerns are legitimate. We are respectfully requesting ATC to acknowledge that there are studies which exist which contradict the studies ATC will reference to us. Please take this community's concerns into consideration when choosing the substation location.

Sincerely,

Pittsfield Community

I understand we need more electrical power. The Kewaunee Nuclear Plant is Closing Down with Existing Infrastructure. I believe we should utilize existing Rite-of-Way & Structure before rendering Farmland, homes, & Farm agri-businesse useless and unwanted because of "High" Voltage Transmission Structures.

Is The Source of your Electricity That will Be Transported Hydro-Electric, Natural Gas, Nuclear, or Some Other Fossil Fuel? Please Route The Project Further West. (If Needed?)

Thanks,
(signed)

My property address is W771 State Hwy 156, Pulaski WI. 54162. Is my property still being considered for the line location ? The high power line that I understand is being planned would ruin my property if it went next to the exisitng easment and would be very close to my home and horse barn. If it when in or next to the highway right of way it would damage the entire neighborhood. Drive STH 22 from Shawano to Embarrass and I am sure you would agree with me. If a line must be completed for a new substation near STH 156 & STH 29 the route that goes directly from the site northerly between 29 and 32(west of the Village of Pulaski) appears a better choice. I also head that property owners that make noise have less chance of having the line on their land vs. ones that don't. In any event I already have one power line easement on my property and I am totally against any plan to include my proeprty in the line location option as well as against any line along the R/W of STH 156. Thank you for reading my message and I look forward to hearing that my prorerty is not being considered for your project.

Subject: My property

It is only a little more than 3 acres and I have lived here since 1974 and planned to live here until I die. I try to grow most of the fruits and vegetables for myself and my family. I also work hard to keep up my house & garage with upgrades.

This would be a hardship beyond my ability to deal with if you decided to put your transmission lines through or next to my property. I am 64 years old and single.

A425-1 It appears that our property (W687 State Hwy 156, Pulaski, WI) is in line for one of the paths for the new power lines. We already have one power line and we do not want another. If you take any additonal property, we will loose our woods and the power lines would be close to our home. We moved to this property in March 2012, there was nothing mentioned or disclosed to us about this plan. We moved here because it was secluded.

When we called after moving here, ATC told us that they would be clearing the land under the lines this year (2012) which is the 5th year. Apparently, it is done every 5 years. After numerous calls, we were told that it would be additional 2 yrs before they would be cutting the brush. If they can't maintain what you have now, how can you manage more....We have been trying to clear it on our own, at our own expense.

Again, no more new power lines near us....

Don VanBeckum

I would like to address the potential placement of your powerlines in the area of sections S620-1, S630-1, S450-1 as indicated on the enclosed map. We are currently trying to sell the property as a commercial site and feel that if you place your lines on or over our property it will have an extreme adverse effect on any potential sale, not to mention how it may affect your line placement should something be finalized and built before you receive any okay to build lines in these sections

Thank you

Jackie Olson
American Transmission Company
P.O. Box 47
Waukesha, WI 53187-0047
Email: jolson@atcllc.com

Dear Ms. Olson,

Please be advised that this law firm has been retained by the Michigan North Woods Club (the "MNWC") to represent its interest in ensuring that its 10,000 acre private property not be targeted as a route for the Bay Lake project transmission line. The MNWC property has been maintained for nearly a century with a focus on natural resource and habitat protection. The construction and maintenance of the transmission line would permanently destroy these resources. To date, ATC has received preliminary comments from MNWC members enumerating the many respects in which the proposed transmission line would be irreparably destructive to the MNWC property. Hopefully, the compelling content of these comments will have discouraged further consideration of the MNWC property for the transmission route. If in fact the MNWC property has already been eliminated as a potential route, kindly so notify us. Otherwise, we intend to follow up with more formal communications to A TC and action to protect the property if those steps become necessary.

We are in receipt of your ATC News communication dated August 27, 2012, which states that "work in a fourth project area in Dickinson and Marquette Counties in Michigan's Upper Peninsula [is] temporarily on hold." We would, accordingly, very much appreciate written clarification from the company respecting the details and timing of the subject delay. Will this affect the scheduling of proposed public hearings in October or otherwise alter the ultimate timeline for responding to the company's progress in route selection? In short, please provide us at your earliest

convenience with any information available to you respecting the timing, process, and implications of ATC's having placed its Marquette County plans "on hold."

As you have already been made aware of the MNWC's vehement opposition to routing the Bay Lake project transmission lines through MNWC property, you would be correct to surmise that the MNWC intends to utilize any and all appropriate means to persuade ATC to select a different route or to prevent A TC from executing on a decision to insist upon this route. Having said that, with

considerable experience in contested matters of this nature, we would like to assure you of our intent

to communicate openly and candidly with you through a process that we hope will result in a favorable decision on your part. In introducing ourselves through this letter and asking you to provide us with any information relevant to the immediate and longer-term future of this project, we hope and expect that you will agree with us that openness, candor and civility between us from the outset will benefit both sides. We look forward to your earliest response.

BTW/raa

Very truly yours,

Mr. David Hovde
American Transmission Company
P.O. Box 6113
De Pere, Wi. 54115

Dear Sir,

This letter is in response to your company's proposed routing of a new electric transmission line through property owned by Louis V. and Alice M. Jarosh in Menominee County Michigan. The property you're interested in establishing this power line adversely affects five Forty's in Holmes and Faithorn Township. Your proposed project easement rests just south of an existing easement in Nathan, Michigan and in Faithorn Twp. on the East most side of County Highway 577 (Line C70-4) in the area of Blom near Maple Lane.

In a recent phone conversation you indicated that these were "proposed routes" and that alternates in Bay Lake Project Area #4 were also in consideration. Sir, I would like to convey to you why your company needs to consider routing your line elsewhere, and NOT through Jarosh Lands.

Obviously most landowners are passionate about their property and harbor strong convictions regarding the disposition of their land, even with the subject of reliable power and strengthening the grid so that the U.P. can have reliable power for future emerging industry. My family has owned their land in Menominee County since 1913, almost a century of stewardship, and we are passionate in

preserving the land as it stands. My Grandfather George o. Jarosh understood progress and responsible land management and that the two could work "hand in hand". He understood the dire need for reliable power in the 1940's and agreed to a power line easement through his Nathan, Michigan property so that the surrounding communities could prosper. Back in the day he entered into an agreement with then Wisconsin-Michigan Power company to run a line through his forty'S in Nathan to

bring power to Faithorn, Michigan with the understanding that there would be no-cost to his home located in Faithorn and that any billing would be for actual usage in perpetuity only. Wisconsin Michigan

Power Company (later Wisconsin Electric) NEVER honored their agreement with my Grandfather. Bitter feelings existed ever since and as a result our family has been critical of the power company. In 1952 Faithorn was electrified. To this day and for obvious reasons, the utility fails to recognize and honor the agreement forged between them and my Grandfather.

With that short history lesson aside, I would like to elaborate further as to why your power line (Bay Lake Project line #4) is harmful and detrimental to Jarosh Lands. Firstly, my father Louis Jarosh is a cardiac patient. He recently underwent pacemaker surgery this summer. It is understood that these high voltage lines emit and generate harmful "EMF's" (Electro -Magnetic Frequencies). The mere presence of this line emitting harmful EMF's over and through his property, even in the vicinity of his

residence could lead to cardiac arrhythmias, stroke and ultimately to his death! They are unhealthy and harmful, and potentially lethal to a pacemaker patient!

Secondly, your project stands to cause agricultural losses to our forest management program. For the past 3S years we have retained a professional Forester (Sivula Forestry of Daggett, Michigan)

to manage

the land for timber revenue harvest. Timber revenue is critical in generating the capital needed to maintain the property and suffice its taxes. Clearing new lanes through our existing timber for the Bay Lake Project will negatively affect our harvest now and in future years. Lost revenue and unrecoverable

stumpage losses will adversely impact our bottom line. Losses of harvestable timber (White Oak, Red Oak, Rock Maple, Tamarack, Poplar, Spruce and Balsam stands) are all managed in both our Faithorn and Nathan management tracts. Again, your project stands to cause agricultural losses to our forest

management program.

Thirdly, your proposed line East of County Highway S77 (Maple Lane) is plotted directly through and atop our family home in Faithorn. This is completely unacceptable as it will make our home and property uninhabitable! Furthermore, your proposed line would destroy a tree farm/Spruce plantation home to hundreds of trees my father and I planted in our Faithorn Twp. North forty. Again, your line would mean the destruction of the plantation leading to unacceptable loss in agricultural revenue.

Fourthly, both tracts of property are fragile and contain wetlands. I need not remind you of the fragility of these dynamic ecological systems. Our Nathan property is home to Muscano Creek and flows through our bottom land and is home to a number of delicate species such as the Brook trout, fresh

water shrimp, clams and others. Disrupting this estuary is not the way of responsible management and certainly your line would impact this system greatly. Our Faithorn property is also home to Bird Creek,

again another trout stream that flows into the Pemine Creek that ultimately feeds into the Menominee River. Many species rely upon that waterway and your line would certainly adversely affect its ecological system when you clear your easement directly through its pathway!

In closing, I believe it is quite obvious that the Bay Lake Project #4 and its proposed line through my family land is far too detrimental to my father's health, disruptive to our home, too costly in lost timber revenues and destructive to the aesthetics of my family property in Holmes and Faithorn Township. The

proximity is too close to our home in Faithorn and would render it unlivable. The destruction of our timberlands and associated losses of revenue are unacceptable. The environmental impact of your power line on two waterways (Bird and Muscano Creeks and their tributaries) is too great to bear.

Lastly, we are acutely aware of what a power line through our woods means. We witness the ugliness

and remember the un-kept promises of the power company dating back to 1952 every time we pass beneath the line. I seriously urge you to explore other "alternate routes" devoid of any path onto Jarosh property as we are not interested.

Thank you for your time and attention to this matter.

Paul J. Jarosh
Managing Trustee
Jarosh Family Trust

The Michigan North Woods Club (MNWC) is a non-profit, membership based conservation organization. Since it's founding in 1926, the MNWC has consistently devoted its time and resources to conservation, reforestation and propagation of fish and game on our grounds. The construction, maintenance and operation of the proposed high-voltage power line will threaten the very existence of the ecosystem we have committed nearly a century to protecting. This language particular to Dewey Lake (P40-3 and C30-3): This area hosts populations of sand hill cranes, blue herons, loons, beaver, moose, eagles, variety of turtles as well as a wide variety of plant communities. Infringements on wet lands and lakes are unavoidable in the proposed "Dewey Lake" pathway -

(over please)

These wetlands act as valuable habitat for plants, birds, and moose and the combination of forested landscape and wetland act as a combination - regulate both streamwater flow and stream water quality. The watershed that surrounds and includes both Dewey Lake and Dewey Swamp, create the headwaters for Camp Eleven Creek, and this creek ultimately flows into the Escanaba River. Changes to headwater systems are particularly meaningful_ they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community. There is no such thing as an ecologically-friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to the system and those downstream.

The following reasons are why I feel this Bay lake Project in this specific area would be destructively intrusive citing The Bald Eagle Protection Act, Endangered Species Act, Michigan Wetlands Protection Act, Michigan DNR private landowner incentive program. Construction, operation and maintenance of high voltage power lines will: degrade streams and stream crossings with an abundance of silt and other matter - fragment both plant and animal habitats reducing mobility for some species, and threatening their existence - fragment habitat which can also create a human commensal condition whereby animals that are comfortable with humans, but threatening to other animals (cow birds that take over more fragile species. Create interruption in forest edge providing increased opportunity for invasive species. Provide a greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATV's, and the like threatening animal and plant life.

Yes, I would like to receive project update and information via email

Comments:

I am an associate member of the Michigan North Woods Club, a club founded on the principles of conservation, reforestation and propagation of fish and game, and am writing in objection to the proposed 345 KV transmission line that may potentially use the club as passage. Specifically, I am in objection to the possible passage defined as ¿ Dewey: P40 and C30-3.

The Michigan North Woods Club (MNWC) is a nonprofit, membership-based conservation organization. Since its founding in 1926, the MNWC has consistently devoted its time and resources to the conservation, reforestation and propagation of fish and game on our grounds. The construction, maintenance and operation of the proposed high-voltage power line will threaten the very existence of the ecosystem we have committed nearly a century to protecting.

The area defined as Dewey: P40-3 and C30-3 hosts populations of sand hill cranes, blue herons, loons, beaver, moose, eagles, a variety of turtles, as well as a wide variety of plant communities. Infringements on wetlands and lakes are unavoidable in the proposed ¿Dewey Lake¿ pathway. These wetlands act as valuable habitat for plants, birds, and moose and the combination of forested landscape and wetland act to regulate both stream water flow and stream water quality. The watershed that surrounds and includes both Dewey Lake and Dewey Swamp, create the headwaters for Camp Eleven Creek, which ultimately flows into the Escanaba River. Changes to headwater systems are particularly meaningful as they effect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

The MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property, which is in excess of 9000 acres with small embedded roads. Whole watersheds are included within the property and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. I am very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to maintain the easement area of the transmission line. Also, I am very concerned that the power line and associated implementation activities will threaten eagle nesting sites, of which we have several. I believe the impact from

Bay Lake Formal Comments - Additional Comments by County/Municipality

traffic necessary to operate and maintain the transmission lines will be detrimental to the wildlife habitat we have worked to protect and that the EMF (electromagnetic field) impacts would also be detrimental to the wildlife, including the fish on our property. In addition, our jack pine areas, which provide ideal habitat for the Kirtland Warbler, an endangered species, will be disturbed by the transmission lines.

We currently have all approximately 37 miles of our perimeter fenced in order to protect the natural areas we have worked diligently to preserve. We believe opening the area for the transmission lines will provide additional access that could be detrimental to our 86 year effort. It has been my experience as a part-time resident of the Upper Peninsula that individuals commonly use utility easements as avenues for travel on recreational vehicles.

It is my understanding that as a member of Wisconsin's Green Tier program, ATC pledges its commitment to environmental sustainability. I believe that the impacts to the MNWC from the proposed transmission lines would result in impacts so profound to our environment and wildlife that they contravene ATC's commitment.

I look forward to your response to these concerns and trust you will keep me updated as to your future plans.

Respectfully,

Stephen L. Christensen

Yes, I would like to receive project update and information via email

Comments:

I am an associate member of the Michigan North Woods Club, a club founded on the principles of conservation, reforestation and propagation of fish and game, and am writing in objection to the proposed 345 KV transmission line that may potentially use the club as passage. Specifically, I am in objection to the possible passage defined as ¿ Bryan Creek Corridor Erickson: O40-3, O50-3, O60-3.

The Michigan North Woods Club (MNWC) is a nonprofit, membership-based conservation organization. Since its founding in 1926, the MNWC has consistently devoted its time and resources to the conservation, reforestation and propagation of fish and game on our grounds. The construction, maintenance and operation of the proposed high-voltage power line will threaten the very existence of the ecosystem we have committed nearly a century to protecting.

The area defined as Bryan Creek Corridor Erickson: O40-3, O50-3, O60-3 hosts populations of sand hill cranes, blue herons, loons, beaver, moose, eagles, a variety of turtles, as well as a wide variety of plant communities. The easternmost pathway potentially infringes on three watersheds, all of which have their headwaters within the protection of the MNWC property lines. The first watershed, one that includes Big Drake, Little Drake, Spear, Erickson and Crescent lakes is the headwater for Bryan Creek. The second watershed includes Trout Lake and is the source for Clear Creek. The third watershed includes Pilliod Lake, Little Bass Lake, Big Bass Lake and Bass Lake Creek. Clear Creek and Bass Lake Creek join Bryan Creek (Bass Lake Creek doing so well south of MNWC property,) and this larger version of Bryan Creek ultimately flows into the Escanaba River. Changes to headwater systems are particularly meaningful ¿ they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

I believe that this route in the eastern part of the MNWC (code numbers O40-3, O50-3, O60-3) will conflict with our agreement with and commitment to the Michigan DNR's Private Land-Owner Incentive Program (a state conservation program that partners with local owners to reintroduce native tree species throughout the state) in the Green Hills area. The Erickson pathway also infringes on the Green Hills, an area that includes large stands of mature hemlock (unusual for the

Upper Peninsula.)

The MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property, which is in excess of 9000 acres with small embedded roads. Whole watersheds are included within the property and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. I am very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to maintain the easement area of the transmission line. Also, I am very concerned that the power line and associated implementation activities will threaten eagle nesting sites, of which we have several. I believe the impact from traffic necessary to operate and maintain the transmission lines will be detrimental to the wildlife habitat we have worked to protect and that the EMF (electromagnetic field) impacts would also be detrimental to the wildlife, including the fish on our property. In addition, our jack pine areas, which provide ideal habitat for the Kirtland Warbler, an endangered species, will be disturbed by the transmission lines.

We currently have all approximately 37 miles of our perimeter fenced in order to protect the natural areas we have worked diligently to preserve. We believe opening the area for the transmission lines will provide additional access that could be detrimental to our 86 year effort. It has been my experience as a part-time resident of the Upper Peninsula that individuals commonly use utility easements as avenues for travel on recreational vehicles.

It is my understanding that as a member of Wisconsin's Green Tier program, ATC pledges its commitment to environmental sustainability. I believe that the impacts to the MNWC from the proposed transmission lines would result in impacts so profound to our environment and wildlife that they contravene ATC's commitment.

I look forward to your response to these concerns and trust you will keep me updated as to your future plans.

Respectfully,

Stephen L. Christensen

Subject: Repair damage caused by work on power lines

David,

I'm mailing you this, because your name, number and email address were referenced to me, in a letter from your

company. Concerning this springs, contractor work on the 330 kv lines that run across the back corner of my farm, on

the corner of Greiner Rd. and Weyers Rd., in the town of Freedom. I need the correct person to talk to, concerning

restoring the grounds, that were damaged by the heavy equipment during your upgrade work. The equestrian

trail on the west and east side of the property was severely rutted. The entrance to the property from Weyers road is

degraded due to the heavy equipment usage, and the 1/8 mile pathway from east to west across the property is now

has severe compaction ruts in the grading.

I will try to contact you at 1 -866-899-3204 ext. 6550 tomorrow (4-11-2012) at about 09:00am., unless you refer me to

someone else before that time. I have some photos, both pre and post construction, and have a full description of the

area that needs some remedial action.

Please reply, so we can resolve this issue, before the normal spring equestrian season occurs, to minimize the chance of

injury and other possible implications.

Thanks,

Ron Kranski

We have property at 1060 West Little Shag Lake Rd. The current power line is right behind our residence. There is another, similar, power line out by West Little Shag Lake Rd. We would be in opposition to having a larger line running right behind our residence but we would be O.K. with having it by the road.

Thanks for your consideration.

I heard that there are a couple of major businesses that will benefit greatly by these new transmission lines in the U.P. all at the expense primarily by the residential costumers. Why aren't they contributing a fair or big share to this project.

I am one of the land owners on one of the proposed corridors. I was unable to make any of the meetings as I live almost 4 hours away. I was told to check the website for updates on May 25th, which I did, but am unable to decipher what, if anything, new was posted on the website from the meetings.

Could you please give me any updated information, as related to either a narrowing of the proposed corridors, new time frame, etc?

Thank you-

Jennifer

Folks:

It is hard to comment on the location of a project that is not needed.
UP power demand has been pretty level for some time, and is not forecast to increase. So why add extra charges to ratepayers for something that is not needed.

David Allen

Hello,

I am curious to know what property that we own is next to a proposed power line route. We own a house at 2611 Sage Dr. and a cottage at 20515 LaFave Dr. Goodman, wi (Fence, wi on some maps). How will this affect us?

And where is the closest informational meeting to our Green Bay location?

Thank-you,

Carrie Overeem

As a resident of west Green Bay, within a half mile of hwy 41, I would prefer that the new high voltage lines follow a route in west Brown County, north to Morgan, rather than the hwy 41 corridor through Howard, Green Bay and Ashwaubenon.

There appears to be a less densely populated area to route through Oneida and/or Hobart that could connect southern Brown county to the line in Pittsfield.

Thank you for consideration of my request on behalf of the Parkwood neighborhood.

PDF Name: C_HDavis080912.pdf

Dewey: P40-3 and C30-3

1. This area hosts populations sand hill cranes, blue herons, loons beavers moose eagles variety of turtles as well as a wide variety of plant communities. Infringements on wetlands and lakes are unavoidable in the proposed "Dewey Lake" pathway. These wetlands act as valuable habitat for plants, birds, and moose and the combination of forested landscape and wetland act as a combination - regulate both stream water flow and stream water quality. The watershed that surrounds and includes both Dewey Lake and Dewey swamp, create the headwaters for Camp Eleven Creek, and this creek ultimately flows into the Escanaba River. Changes to headwater systems are particularly meaningful as they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.
2. We are very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to maintain the easement area of the transmission line.
3. We believe that the power line and associated implementation activities will likely threaten eagle-nesting sites, of which we have several.
4. MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property ((>9,000 contiguous acres, with small embedded roads). Whole watersheds are included in the property, and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. The Erickson pathway effectively dissects (cuts in two) the area protected by the club, and will do so at scale much more profound than does the Bryan Creek Road. It will break a large protected space into two smaller fragments. As a result an increasing fraction of the MNWC will be abutting perpetually degraded habitats. Further some species will doubtlessly be unwilling to move through that degraded habitat.
5. We believe the impacts from traffic necessary to operate and maintain the transmission lines will be detrimental to the wildlife habitat we have worked to protect.
6. We believe that the EMFs (electromagnetic field) impacts would be detrimental to wildlife and fish on our property.
7. We believe that the route in the western part of the MNWC (code numbers P40-3, C30-3) would most likely interfere with any future participation in the Michigan DNR's Private landowner Incentive Program (a state conservation program that partners with local owners to reintroduce native tree species throughout the state) which we are presently participating in the eastern part of the Michigan North Woods Club.
8. We currently have all 37 miles of our perimeter fenced in order to protect the natural areas we have worked diligently to preserve. We believe opening the area for the transmission lines will provide additional access that could be detrimental to our 86-year effort. It has been my experience as a part-time resident of the Upper Peninsula and a Family Member of the Michigan North Woods Club for over 61 years, that individuals commonly use utility easements as avenues for travel on recreational vehicles.)
9. Bald and Golden Eagle Protection Act - prohibits activities that disturb (active and inactive)

nesting sites. Eagles are known to nest throughout the MNWC.

10. Endangered Species Act - among the animals identified by the ESA are the following, which may reside in or travel through the MNWC: Canadian Lynx-threatened.

-Kirtland's Warbler-endangered.

-Cougar--endangered and last sighted in Marquette County July 2012

11. Michigan DNR Private Landowner Incentive Program- More than 600 species of plants and animals are listed as threatened, endangered or special concern in Michigan, in large part because of habitat loss. Most of these rare and declining species occur on private land. The primary goal of the Landowner Incentive Program is to help private landowners create and manage habitat for species that are rare and/or declining. In 2011 the MNWC in the Green Hills area, which would be impacted by the Bryan Creek Corridor (O40-3; O50-3; O60-3) proposal. We believe other areas of the property qualify for the program.

12. Michigan Wetlands Protection Act-- the law requires that persons planning to conduct certain activities in regulated wetlands apply for receive a permit from the state before beginning the activity. Permits are required for activities including construction, operation and maintenance of any use or development in a wetland.

In addition to the laws cited above the construction, operation and maintenance of the high-voltage power lines will:

-degrade streams and stream crossings with an abundance of silt and other matter -fragment both plant and animal habitats thereby reducing mobility for some species and threatening their existence

-fragment habitat which can also create a human commensal condition whereby animals that are comfortable with humans but threatening to other animals (cow birds that take over the nests of more fragile bird species for example) drive out threatened, endangered or species of concern

-create more interruption in the forest edge providing significantly increased opportunity for invasive species

-provide a much greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs and the like threatening both animal and plant life

As a member of Wisconsin's Green Tier program, ATC pledges its commitment to environmental sustainability. We believe that the impacts to the Michigan North Wood Club from the proposed transmission lines (O40-3, O50-3, O60-3 and P40-3, C30-3) would result in impacts so profound to our environment and wildlife that they contravene ATC's commitment.

Bryan Creek Corridor: O40-3 O60-3

1. This area hosts populations sand hill cranes, blue herons, loons beavers moose eagles variety of turtles as well as a wide variety of plant communities. The easternmost pathway potentially infringes on three watersheds, all of which have their headwaters within the protection of the Blub's property lines. The first watershed, one that includes Big Drake, Little Drake, Spear, Erickson and Crescent Lake, is the headwater for Bryan Creek. The second watershed includes Trout Lake, and is the source for Clear Creek. The third watershed includes Little Bass, Big Bass and Bass lake Creek. Clear Creek and Bass Lake join Bryan Creek (Bass lake Creek doing so well south of MNWC property), and this larger version of Bryan Creek ultimately flows into the Escanaba. Changes to headwater systems are particularly meaningful - they affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

2. We are very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to maintain the easement area of the transmission line.

3. We believe that the power line and associated implementation activities will likely threaten eagle-nesting sites, of which we have several.

4. MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property ((>9,000 contiguous acres, with small embedded roads). Whole watersheds are included in the property, and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. The Erickson pathway effectively dissects (cuts in two) the area protected by the club, and will do so at scale much more profound than does the Bryan Creek Road. It will break a large protected space into two smaller fragments. As a result an increasing fraction of the MNWC will be abutting perpetually degraded habitats. Further some species will doubtlessly be unwilling to move through that degraded habitat.

5. We believe the impacts from traffic necessary to operate and maintain the transmission lines will be detrimental to the wildlife habitat we have worked to protect.

6. We believe that the EMFs (electromagnetic field) impacts would be detrimental to wildlife and fish

7. We believe that our Jack Pine areas, which provide ideal Kirtland's Warblers' (an endangered species) habitat, will be disturbed by the transmission lines.

8. We believe that the route in the eastern part of the MNWC (code numbers O40-3, O50-3, O60-3) will conflict with our agreement with and commitment to the Michigan DNR's Private landowner Incentive Program (a state conservation program that partners with local owners to reintroduce native tree species throughout the state) in the Green Hills. The other route (P40-3 and C30-3) would likely interfere with any future participation in this program.

9. The Erickson pathway also infringes on the Green Hills, an area that includes large stands of mature hemlock (unusual for the Upper Peninsula).

10. We currently have all 37 miles of our perimeter fenced in order to protect the natural areas we

Bay Lake Formal Comments - Additional Comments by County/Municipality

have worked diligently to preserve. We believe opening the area for the transmission lines will provide additional access that could be detrimental to our 86-year effort. (It has been my/our experience as a part-time resident of the Upper Peninsula and a Family Member of the Michigan North Woods Club for more than 61 years, that individuals commonly use utility easements as avenues for travel on recreational vehicles.)

11. Bald and Golden Eagle Protection Act-prohibits activities that disturb (active and inactive)nesting sites. Eagles are known to nest throughout the MNWC.

12. Endangered Species Act-among the animals identified by the ESA are the following, which may reside in or travel through the MNWC: Canadian Lynx-threatened.

-Kirtland's Warbler-endangered.

-Cougar--endangered and last sighted in Marquette County July 2012

13. Michigan DNR Private Landowner Incentive Program- More than 600 species of plants and animals are listed as threatened, endangered or special concern in Michigan, in large part because of habitat loss. Most of these rare and declining species occur on private land. The primary goal of the Landowner Incentive Program is to help private landowners create and manage habitat for species that are rare and/or declining. In 2011 the MNWC and the Michigan DNR entered into a contract to establish an Incentive Program at the MNWC in the Green Hills area, which would be impacted by the Bryan Creek Corridor (O40-3; O50-3; O60-3) proposal. We believe other areas of the property qualify for the program.

14. Michigan Wetlands protection Act-- the law requires that persons planning to conduct certain activities in regulated wetlands apply for and receive a permit from the state before beginning the activity. Permits are required for activities including construction, operation and maintenance of any use or development in a wetland.

In addition to the laws cited above the construction, operation and maintenance of the high-voltage power lines will:

- degrade streams and stream crossings with an abundance of silt and other matter -fragment both plant and animal habitats thereby reducing mobility for some species and threatening their existence

- fragment habitat which can also create a human commensal condition whereby animals that are comfortable with humans but threatening to other animals (crows that take over the nests of more fragile bird species for example) drive out threatened, endangered or species of concern

- create more interruption in the forest edge providing significantly increased opportunity for invasive species

- provide a much greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs and the like threatening both animal and plant life

As a member of Wisconsin's Green Tier program, ATC pledges its commitment to environmental sustainability. We believe that the impacts to the Michigan North Wood Club from the proposed transmission lines (O40-3, O50-3, O60-3 and P40-3, C30-3) would result in impacts so profound to our environment and wildlife that they contravene ATC's commitment.

Re: Bay Lake Project
Dewey: P40-3 and C30-3

Dear Sir/Madam:

We have had the opportunity to visit the Michigan North Woods club and have seen the results of 86 years of stewardship. The focus of this club has been to protect and conserve the forests, lakes and streams. In this they have been largely successful and they are to be commended for their good work.

On a recent visit to the Dewey Lake area, we were amazed to encounter a moose. There are only a few such areas in the U.P. where such a sight is possible. To lose this lake and wetland area would be tragic and certainly the incursion of a high-voltage line through this ecosystem would destroy the possibility of ever again having such an experience.

My wife and I encourage you to consider other less destructive routes.

Yours truly,
Mr. and Mrs. Tim Deitlin
413 S. Prospect Ave.
Park Ridge, IL 60068

Bryan Creek Corridor: O40-3, O50-3, O60-3

I believe that the increased traffic that will come with the operation and latter the mantance of the transmission lines will cause harm to the wildlife that we all worked hard to protect.

Fred C & Sarah Flosi - Member of MI Northwoods Club - 2220 N Burling St, IL-NA

Dewey: P40-3 and C30-3

It is disturbing to think of the damage to Dewey Lake that would occur by the power lines through this route. This is an area that is frequented by sand hill cranes, blue herons, loons, beavers and other plant and animal life.

Comment Date: 07/31/2012, by Sarah Flosi

Bryan Creek Corridor: O40-3, O50-3, O60-3

Watersheds are universally recognized as vital to maintaining an ecologically balanced environment. As the Bryan Creek Corridor contains 3 watersheds, it is critical that these watersheds are not disturbed by the power lines through this route. In addition to the destruction that will be caused by the laying of the power lines, the herbicide will cause damage to the numerous plants and wildlife that currently exist in this area.

Dewey: P40-3 and C30-3

- This project jeopardizes the ecosystem that the MNWC has been protecting for the last century.
 - The wetlands in the Dewey Lake pathway will likely be adversely impacted by
 - electromagnetic field
 - heavy equipment needed for construction
 - pollution from heavy equipment and the likely increase in transient traffic along the easement.
 - With impaired wetlands, aquatic populations will suffer, which could impact the struggling American Eagle population
-

Bryan Creek Corridor: O40-3, O50-3, O60-3

(This language particular to the Bryan Creek Corridor Erickson (O40-3, O50-3, O60-3) MNWC is committed to, and founded on the premise of, conservation of forested and aquatic systems. Our ability to support this goal is linked to the scale of the property (c >9,000 contiguous acres, with small embedded roads.) Whole watersheds are included in the property, and large animals with large home ranges, such as wolves, moose, eagles and cranes, can exploit the MNWC as a contiguous refuge. The Erickson pathway effectively dissects (cuts in two) the area protected by the club, and will do so at scale much more profound than does the Bryan Creek Road. It will break a large protected space into two smaller fragments. As a result an increasing fraction of the MNWC will be abutting perpetually degraded habitats. Further some species will doubtlessly be unwilling to move through that degraded habitat. We believe the impacts from traffic necessary to operate and maintain the transmission lines will be detrimental to the wild life habitat we have worked to protect. Joyce H. Ganci

July 20, 2012

To Whom It May Concern:

I am writing in regards to the proposed high-voltage power line that would run through the area around Dewey Lake at the Michigan Northwoods Club. P40-3 and C30-3

I am someone who has devoted his life to researching waterway ecosystems and have also appreciated the conservation goals of the Michigan northwoods club for many years now. It is clearly a place whose principles are founded upon honoring and preserving natural habitats.

I am very concerned about the effects on our lakes, plant communities and wildlife from the herbicides used to maintain the easement area of the transmission line.

The aquatic systems in the woods are of particular interest to me, and they would be greatly compromised by the ATC's proposed power lines.

AS for the Dewey Lake area, infringements on wetlands and lakes are unavoidable in the "Dewey Lake" pathway. These wetlands act as valuable habitat for a fragile ecosystem that relies on regulated streamwaters, lakes, creeks and swamps that are all on that property.

I also believe that the impacts from traffic necessary to operate and maintain the transmission lines would be detrimental to the wildlife habitat that has been protected up until now.

I hope and pray that the ACT will not build the proposed power lines on the Michigan northwoods property.

Sincerely,

(signed)

Jim Gibeaut

As a guest in the North Woods club, I have had the awesome opportunity to enjoy nature in its natural habitat. Conserving our environment is not a luxury, it is mandatory. Human footprints and our man made machinery have had a direct effect on global warming and endangering our wildlife and earth.

Please consider the effect these powerlines will have on the environment that should be protected by these types of acts.

The MNWC has been a steward to the watersheds & wildlife that run through this property of the MNCW by planting trees & maintaining the lake & dam systems as well as working with government officials (Fish & Game & Forestry) to protect the environment & watersheds. This has led to a thriving ecosystem at the MNWC & it supports a variety of wildlife. I have personally witnessed this wildlife including seeing loons, beavers, blue herons, trout, deer, bears, turkeys, grouse, skunks, osprey as well as other wildlife. The creation of the power lines will destroy a significant part of the ecosystem as well as the watersheds. The use of construction equipment will cause erosion areas as well as polluting the environment with use of herbicides to control undergrowth on the electrical line route. The erosion & pollution will damage & potentially kill several species of plants & animals throughout the watershed. I eat fish caught in these lakes & I am concerned with how the use of herbicides could be dangerous to myself & family. It also concerns me that this will impact anyone that uses this water shed as well as the wildlife that could also be poisoned. Erosion poses a hazard to the environment as the sediment can destroy fishing habitats & plants that rely on this clean water to survive.

Bryan Creek Corridor: O40-3, O50-3, O60-3

The Bryan Creek Corridor Erickson - O40-3, O50-3, O60-3 hosts populations of sand hill cranes, blue herons, loons, beavers, moose, eagles, variety of turtles as well as a wide variety of plant communities. I believe that the power line and associated implementation activities will likely threaten eagle-nesting sites, of which there are several. The jack pine areas, which provide ideal Kirtland's Warbler's (an endangered species) habitat, would be disturbed by the transmission lines. The Erickson pathway also infringes on the Green Hills, an area that included large Stands of mature hemlock (unusual for the UP).

I believe that the impacts to the MNWC from the proposed transmission line would result in impacts so profound to our environment and wildlife that they conflict with ATC's commitment to the environment. Please do not include this area in consideration.

Thank you.

Bryan Creek Coprridor: O40-3, O50-3, O60-3

Michigan DNR Private Landowner Incentive Program (PLIP) At least 600 species of plants and animals are listed as threatened, endangered or special concern in Michigan, in large part because of habitat loss. Most of these species occur on private land. The primary goal of the 'PLIP' is to help private Landowners create and manage habitat for species that are rare and declining. The MNWC and the DNR have contracted to establish this program at the MNWC Green Hills area. (Section 32, T.46N-R.27W) The Bryan Creek Corridor (O40-3; O50-3; O60-3) would impact this property. Other areas of our approximately 9,000+ acres would qualify for the "PLIP" program (In Tilden and Ely Townships). In Tilden, sections 5,6,7,8,9,10,15,16,17, and 18-T.45N-R.27W and in Ely sections 1,2,3,10,11,12,13,14,15-T.45N-R.28W.

Bryan Creek Corridor O40-3, O50-3, O60-3

For the past 50 years we have had the privilege of annually visiting the Michigan North Woods Club as guests of a club member. This area is without question one of the most unique protected natural environments on private land that we have been fortunate enough to enjoy. We are aware of and have been actively involved in the Club's efforts to preserve, protect and maintain the biological and ecological diversity found within its border both for its present members and for future generations through environmental programs we have attended and speaking with experts in the field of Michigan conservation issues.

Because of this, it is with deep concern that we hear of proposals to allow high-voltage power transmission lines to be installed through the property. We have become distressed with the potential negative impact the power lines will have in the area on the bald and golden eagle population and nesting sites, disruption to the wetlands areas, and create a threatening the environment for endangered plant and animal species, (specifically those endangered animal species found in the area and identified by the ESA: the Canadian Lynx, Kirtland's Warbler and Cougar).

In addition to the detrimental environmental impact daily operation of the power lines would create, the activities for construction, installation, and maintenance would also negatively affect species of threatened plant and animal habitats that the Club has so vigorously worked to preserve, including impact on streams and stream crossings, increased opportunity for invasive species at the involved forest edges, and open increased opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs etc. threatening animal and plant life.

We earnestly request that the American Transmission Company remove the Michigan North Woods Club property from any proposed routes for the high-voltage power lines and preserve the environmental integrity of the property. We feel this is a reasonable request since alternative potential routes have been identified.

ZIP: 9r109
Home Phone: 415-923-0920 Alternate Phone: 415-828-2679
Email: roger104@acm.org
¿ Yes, I want to receive project updates and information via email.

COMMENTS:

The Bay Lake Project, high-voltage power lines will significantly damage the biological and ecological resources of the Michigan North Woods Club (MNWC). MNWC is a nonprofit conservation association devoted to the care and protection of our 9,000 acre preserve. For nearly a century we have worked to protect the landscape that is home to myriad species, several of which we believe to be endangered, threatened, rare and unique. My specific concerns are:

Bald and Golden Eagle Protection Act¿ Eagles are known to nest throughout the MNWC.

Michigan Wetlands Protection Act-- the law requires that persons planning to conduct certain activities in regulated wetlands apply for and receive a permit from the state before beginning the activity. Permits are required for activities including construction, operation and maintenance of any use or development in a wetland. MNWC has fostered regulated wetlands in these areas.

Michigan DNR Private Landowner Incentive Program¿ More than 600 species of plants and animals are listed as threatened, endangered or special concern in Michigan, in large part because of habitat loss. Most of these rare and declining species occur on private land. The primary goal of the Landowner Incentive Program is to help private landowners create and manage habitat for species that are rare and/or declining. In 2011 the MNWC and the Michigan DNR entered into a contract to establish an Incentive Program at the MNWC in the Green Hills area, which would be impacted by the Bryan Creek Corridor (O40-3; O50-3; O60-3) proposal. Other areas of the property qualify for the program.

In addition to the laws cited above the construction, operation and maintenance of the high-voltage power lines will:

-degrade streams and stream crossings with an abundance of silt and other matter

Bay Lake Formal Comments - Additional Comments by County/Municipality

-fragment both plant and animal habitats thereby threatening their existence

-create more interruption in the forest edge providing significantly increased opportunity for invasive species

-provide a much greater opportunity for unauthorized access by recreational vehicles, snowmobiles, ATVs and the like threatening both animal and plant life

Bryan Creek Corridor: O40-3, O50-3, O60-3

I am writing with concern to the Bay Lake project effecting the Bryan Creek Corridor. Bryan Creek Road already divides the MNWC property creating safety hazards to people and animals alike. Making a larger pathway through this area will only increase dangers and not to mention the harm it will cause to the many lakes and streams that feed into Bryan Creek effecting fish, animals and plants the creek supports.

The MNWC has worked with many organizations for many years to have pristine forests. This pathway could only have a negative impact on what has taken so long to accomplish, including a rare stand of hemlock.

It is my hope the ATC will find a route that will not upset the fragile eco-system the MNWC has worked so hard to protect and maintain.

Dewey: P40-3 and C30-3

For the past 44 years my family and I have witnessed significant ecological improvements on our property. Due to selective forestation where needed, use of existing roadway (no off road), and working with the DNR, the return of Moose and Wolves has been very exciting. The club has created and preserved a perfect habitat for birds, such as Loon, Bald Eagles, Cranes, WoodPeckers including rare and endangered birds like the Kirtland Warbler.

To create such a large pathway through an area anywhere near Dewey Lake could upset this habitat so much, many of the animals, birds and fauna located there may be affected negatively and may leave a long lasting possibly harmful effect for years to come.

Subject: Bay Lake Project (Power Lines)

To Whom It May Concern:

I was recently informed about the proposed Bay Lake Project and the possibility that it may run through the Michigan North Woods Club. I have spoken with my entire family about the proposed project. I have four children that all have spent most of their lives enjoying the pristine nature of the club. My oldest son (22) who now resides in Texas and work for Bass Pro Shops, has told many of his co-workers about his time at the club and they all beg him to bring them to this awesome place. These people are true outdoors man and all have told him, how they have never seen or heard of a place like the Michigan North Woods Club. My youngest son is currently a cub scout. We have talked as a den, to take our den to the club in the future, so many "city children" could witness first hand, what a true outdoor sporting club looks like. Hiking, fishing, swimming and just the love of nature, would make this a memory of a life time for these children. The Michigan North Woods Club is truly a unique place. The members always think about nature and preserving the natural, untouched beauty of the club first. They are so committed to preserving the untouched, natural look and feel of this truly rare club. My family and I beg of you, to find an alternate route for these power lines. I understand progress, but I more fully understand, that a place like the Michigan North Woods Club can never be recreated. Please use all of your recourses to relocate these lines to a less intrusive location. Thank you in advance for your consideration.

Re: Bay Lake Project

To Whom It May Concern:

I'm writing to advocate that the proposed 345 KV transmission lines be placed outside of the Michigan North Woods Club. When the club was founded in 1926, the land involved had been clear cut by the timber industry. Since 1926, the club has set aggressive goals regarding reforestation, conservation of plant and animal species and propogation of fish and wildlife.

Our ability to support our conservancy goals is linked to the scale of the property, which includes over 9,000 acres. Whole watersheds are included in this vast area, and large animals with large home ranges such as moose, wolves, eastern mountain lion, eagles and cranes use our property as a continguous refuge. The Erlickson pathway effectively dissects the area protected by the club. Any of the proposed pathways will fragment a large protected space into smaller pieces. As a result, an increasing fraction of the property will abut perpetually degrading habitats.

Studies have proven that large animals require uninterrupted habitat, and we believe that opening the area of transmission lines will provide additional access that will be detrimental to our 86-year effort towards conservation.

WE have been responsible caretakers of this unique habitat for a very long time; I applaud ATC's endorsement of Wisconsin's Green Tier Program. And I ask that during the routing and siting process, ATC keeps sight of its' state conservation goals.

Thank you very much for your consideration,

(signed)

For 16 years I am coming to the MNWC and I carefully treat to not disturb the environment. I am not even allowed to push over a dead stump! "It is the livingroom of the deer" - I am told. Now you want to cut a big corridor through the Club - it is unthinkable! I do not only dislike the proposal, I oppose it!

I have been a regular guest for more than 16 years in this serene, beautiful Michigan North Woods Club.

As an avid bird watcher and Horticulturist, it would be devastating to the existing wildlife & flora to install high voltage power lines, and watch the adverse effect that would have on all that beauty. Please reconsider this installation.

As a frequent guest at the MNWC, it has been brought to my attention, that an installation of High Voltage Power Lines are proposed to be planned. This property is home to a great variety of wildlife, in the forest, in the air & in its crystal clear lakes. To endanger this would be devastating. If I have a vote - I say "no" please don't do this!

The world as we know it is growing smaller. The MNWC has been a bastion of conservation since the early 1920's they strive to preserve nature in the way God created it. Their continuous conservation efforts should be made as an example to other conservation clubs. Putting a high power line through their property would destroy almost 100 years of conservation efforts. Would also damage endangered species habitat. Destroy large stand of mature hemlock trees. I urge your company to build your power line on an alternate route.

These wetlands act as valuable habitat for plants, birds, and mosses and the combination of forested landscape and wetland act as a combination - regulate both streamwater flow and streamwater quality.

Subject: Comments Regarding Dewey: P 040-3 & C30-3, Bryan Creek Corridor O40-3, O50-3, O60-3

To whom it may concern,

It has come to my attention that there is a proposed High-Voltage Power Line that will run through the property that contains Dewey, Erickson, Big Drake, and Little Drake Lakes.

I would like to express my concern over the proposed route, as these power lines will impact the ecosystem of these lakes and this property in a way that is not ecologically sound.

I believe that the impacts from traffic necessary to operate and maintain the transmission lines, as well as the transmission lines themselves will be detrimental to the wildlife habit that myself, and the other owners of this property have worked very hard to protect, including the habitats of the endangered Kirtland's Warblers that reside in the jackpines on the property.

The proposed power lines run through 37 miles of fenced property that the co-owners have worked diligently to preserve. Opening the area for transmission lines will provide additional access that could be detrimental to our 86-year effort, as it is our experience that individuals commonly use utility easements as avenues for travel on recreational vehicles.

Please re-consider the route of these power lines in order to preserve a rare and beautiful part of the Upper Peninsula of Michigan.

Thank you for your consideration,

Lorna Juett

Re: Bay Lake Project
Bryan Creek Corridor: O40-3, O50-3, O60-3

Dear Sir/Madam:

I object to the proposed high-voltage power line that would go through the Bryan Creek area.

It would destroy the habitat for many threatened and endangered species - eagles, wolves, lynx, and many woodland birds which depend on the forests of this area for breeding.

What it would do to the beauty of the forests goes without saying.

Very truly yours,

Corrinne Keefe

Re: Bay Lake Project
Dewey: P40-3 and C30-3

Dear Sir/Madam:

For more than 40 years I have been witness to the work of the Michigan North Woods Club and their efforts to conserve, protect and defend the lakes, rivers, streams, wetlands and woods that comprise the Michigan North Woods Club.

This area is home to an entire range of wildlife - loons, herons, small nesting birds, kingfishers, swallows, all manner of woodpeckers and happily, eagles. Nothing is more representative of the wild north than the cry of loons, the howl of wolves and coyotes, the clack of sand hill cranes as they fly over toward their feeding grounds on the Sharp-tail Grouse plains (known locally as the Whiskey plains). It is not unusual to see a bear amble out of the swamp to make his way to nearby berry patches. To see the tracks of bobcats in the winter snows that cover the wetlands of the Dewey swamp is a privilege. All these creatures and more live here.

Very importantly, the watershed that surrounds the lake and swamp, creates the headwaters of Camp Eleven Creek, and this creek ultimately flows into the Escanaba River. Changes here would adversely affect everything - both plants and animals in the immediate area and downstream.

The herbicides and heavy machinery that would be used in creating the proposed power line would destroy this place of God-given beauty. It is a legacy that we will leave for our children and grandchildren. It is imperative that we continue to act as stewards of this land and protect it from the unthinking incursions of human enterprise.

Sincerely,

(signed)

Re: Bay Lake Project
Dewey: P40-3 and C30-3

Dear Bay Lake Project Manager:

As a long time visitor to the Michigan North Woods Club, it has been my privilege to witness the presence of many forms of wildlife in the Dewey Lake area - a pristine lake and wetland area. The existence of a proposed high-voltage power line across this area which the MNWC has endeavored to protect since 1926, would adversely affect this delicate ecosystem.

In this area, I have seen blue herons, loons, bears, eagles and beaver to say nothing about the wolves who have returned to this remarkable site. To sacrifice this haven for wildlife would be unconsonable.

Re: Bay Lake Project
Bryan Creek Corridor: O40-3, O50-3, O60-3

Dear Sir/Madam:

On a recent jeep trip through the east section of the Michigan North Woods property which encompasses the above sections of land, I was again struck by the pristine nature of this area...the wetlands, the streams, the lakes and the forests.

In this area there are large stands of Jack Pine...home to the Kirtland warbler, identified in the Endangered Species Act as threatened.

Along the shores of Upper and Lower Little Bass and Big Bass Lakes are nesting sites of Bald Eagles. The Bald and Golden Eagle Protection Act prohibits activities that disturb these sites.

The region around these lakes is remote and a perfect habitat for not only the deer, but also for bear, coyotes and wolves which I have seen along the shores of these lakes - good reason to protect this wildlife range for posterity.

The Michigan Wetlands Protection Act recognizes the importance of wetlands and the Bryan Creek Area has many such wetlands which would be degraded by the construction, operation, and maintenance of high-voltage power lines.

All of the above sited issues are reasons there should be no power lines in this extraordinary place.

Very truly yours,

Mr. Daniel Keefe

Re: Bay Lake Project
Bryan Creek Corridor: O40-3, O50-3, O60-3

Dear Bay Lake Project Manager:

As a member of the Michigan North Woods Club, I have personally worked to preserve the forests of our property.

We have endeavored to be good stewards of this land by managing the forests - timbering and re-planting red pine and jack pine. Over the past 40 years during which time I assisted in the planning and planting, we have seen the fruits of our labor- healthy, young trees...habitat for many birds and animals who range throughout.

To destroy this land by installing high-voltage power lines would undo all the work that we have so conscientiously done over the 40 years of my tenure and the additional 46 years of those who have come before me.

I heartily object to this proposal.

Very truly yours,

James V. Keefe

Re: Bay Lake Project
Dewey: P40-3 and C30-3

Dear Sir or Madam:

The Michigan North Woods Club is a non-profit, membership based organization committed to conservation and protection of woods and wildlife. This has been its purpose since its founding in 1926. Our ability to support this goal is linked to the scale of the property - over 9000 contiguous acres, with small embedded roads. Whole watersheds are included in the property which provides habitat for large animals with large home ranges such as wolves, moose, eagles and cranes. The MNWC is a contiguous refuge for them.

As a member I have devoted time, energy and resources to reforestation, as well as the propagation of fish and game on our grounds. The construction, maintenance, and operation of the proposed high-voltage power line will threaten the very existence of the ecosystem our members have committed nearly a century protecting.

Very truly yours,

Re: Bay Lake Project
Dewey: P40-3 and C30-3

Dear Bay Lake Project Manager:

I have been visiting the area known as the Michigan North Woods Club since I was a child and over the years have had the opportunity to witness first hand, the presence of coyotes, wolves, and most amazingly, moose. The sighting of the moose was recent and was in the Dewey Lake area.

I now bring my wife and our children to the MNWC with the hope that they too will be able to have the same experience of seeing such large animals in their natural habitat. The vast protected lands of the MNWC provides the range needed by such animals. Here there is no interference by man, but this would not be the case if a high-voltage power line were to be constructed.

To consider that this area might be destroyed and such sights gone forever, is truly sad. I therefore state unequivocally my opposition to the destruction of Dewey Lake area and its adjoining wetlands and ask that the long-term effects on the land be given primary consideration.

Your truly,

(signed)

Re: Bay Lake Project
Bryan Creek Corridor: O40-3, O50-3, O60-3

Dear Bay Lake Project Manager:

It has been a privilege to visit the Michigan North Woods Club and to meet the people who have for more than 80 years accepted the responsibility of protecting this land.

I discovered in a conversation with one of the members, that the Club is involved with the state of Michigan DNR in their private landowner incentive program which helps create and manage habitat for species that are rare or declining.

I have seen the effects of these programs in California where I live and am pleased to know that at the Michigan North Woods Club work is being done to protect habitat for endangered species.

I heard of the projected high-voltage power line which might go through the Bryan Creek area of the club. This would be a disaster for the forests and lakes in this area.

Sincerely,

Pam Keefe

Dewey: P40-3 and C30-3

As a regular visitor to the Michigan Northwoods Club (MNWC) I am writing to express my concern about using club land as a passage for the proposed 345 KV transmission line. The area affected in the P40-3 and C30-3 route hosts populations of sand hill cranes, blue herons, loons, beavers, moose, eagles, turtles and a wide variety of plant communities. These wetlands act as a valuable habitat for these creatures and plant life and the MNWC was founded on the premise of forested and aquatic systems. The watershed that includes both Dewey Lake and Dewey Swamp creates the headwaters for Camp Eleven Creek which ultimately flows to the Escanaba river. Changes to headwater systems affect the integrity of everything downstream. Use of herbicides and earth-compressing machines associated with this proposal will be detrimental to this system and those downstream. As a member of Wisconsin's green tier program, ATC pledges commitment to environmental sustainability. We believe this project impacts the MNWC in profound ways that ultimately contravene ATC's commitment.

Bryan Creek Corridor: O40-3, O50-3, O60-3

As a regular visitor to the Michigan Northwoods Club, I am writing to express my concern about using club land as a passage for the proposed 345 KV transmission line. The MNWC is a nonprofit, membership-based conservation organization devoted to the conservation, reforestation and propagation of fish and game on our grounds. The construction, maintenance and operation of the proposed high-voltage power line threatens the ecosystem we're committed to protecting -from the use of herbicides to maintain easements that could affect our lakes, plant life and wildlife, the potential threat to eagle-nesting sites, and the population of sand hill crane, blue heron, loons, beaver, moose, turtles and plant life. The eastern-most pathway of this particular line potentially infringes on three watersheds, all of which have protection within the club property lines:

1. headwater for Bryan Creek, includes Big Drake, Little Drake, Spear, Erickson and Crescent Lakes

2. source for Clear Creek, includes Trout Lake

3. includes Little Bass, Big Bass and Bass Creek Lake

Changes to headwater systems impact the integrity of everything downstream.

Bryan Creek Corridor: O40-3, O50-3, O60-3

The Michigan North Woods Club is a nonprofit, membership-based conservation organization. Since its founding in 1926, the MNWC has consistently devoted its time and resources to the conservation, reforestation and propagating of fish and game on our grounds. The construction, maintenance and operation of the proposed high-voltage powerline will threaten the very existence of the ecosystem we have committed nearly a century to protecting.

We currently have 37 miles of our perimeter at the Michigan Northwoods club fenced in order to protect the natural areas we have worked so diligently to preserve. Our Michigan Northwoods Club is committed to conservation & of forested & aquatic areas. Transmission lines would be detrimental to our wildlife habitat & forested areas that we have protected for over 86 years.

I've been visting the Michigan North Woods Club for a few years & have been lucky enough to experiece it's natural beauty. Fishing on Big Bass Lake was amazing & seeing a bald eagle was one of the highlights. Please reconsider the proposal to place power lines in this area as a habitat like this is too scare as it is. Disturbing this area would jeopardize endangered species like these as well as the Canadian Lynx & cougar which have been seen in neighboring areas in the last year.

ISHPEMING, MI 49849
AUGUST 21, 2012

AMERICAN TRANSMISSION COMPANY
2 FEN OAK COURT
MADISON, WI 53791-8614
RE: BAY LAKE PROJECT
ROUTE O40-3, O50-3, O60-3

TO WHOM IT MAY CONCERN -

THE PROPERTY OWNED BY THE MICHIGAN NORTH WOODS CLUB WOULD BE BISECTED BY TRANSMISSION LINES (AND ADJACENT BUFFER AREAS) IF THE PROPOSED ROUTE (O40-3, O50-3, O60-3) IS SELECTED. THIS ROUTE WOULD DESTROY SIGNIFICANT STANDS OF TREES (INCLUDING MATURE HEMLOCK) AND THE HABITAT THEY PROVIDE (E.G. JACK PINE AND THE PRESENCE OF THE ENDANGERED KIRTLAND WARBLER), VALUABLE WETLANDS WOULD ALSO BE ADVERSELY AFFECTED.

MANY OF THE BIRDS AND MAMMALS PRESENTLY OCCUPYING THE AREA OF THE PROPOSED ROUTE HAVE FORAGING AREAS WHICH WOULD BE SEVERED AND RENDERED INHOSPITABLE FOR THEIR FUTURE WELLBEING.

THE AREA KNOWN LOCALLY AS THE GREEN HILLS IS A HIGHLY VALUED ARRAY OF HABITATS THAT SHOULD NOT BE PERMANENTLY DISTURBED.

I write in very strong opposition to the possibility of the Bay Lake Transmission Lines crossing our property

In particular, I would call your attention to the Endangered Species Act. Our property is an oasis for a wide diversity of animals. Most notable in terms of federal legislation is the Canadian Lynx, the Kirtland Warbler & the Cougar. These animals reside in and travel through our property. In addition we have numerous nesting sites for the Bald Eagle. We expect ATC to help us protect these animals by selecting another route! Thank you for your attention to this issue!

I am writing to voice my concern about the proposed high-voltage power line the ACT is considering running through our property. The founding principles of the club are conservation, reforestation and propagation of fish and game. The proposed project will compromise the conservation goals we have served for 86 years.

As for the Bryan Creek Corridor Erickson (O40-3, O50-3, O60-3), the area hosts populations of sand hill cranes, blue herons, loons, beavers, moose, eagles, and a variety of turtles, not to mention the lush plant life. Changes to the headwater systems would affect the integrity of everything downstream, and heavy earth-compressing machines would also be very detrimental to the fragile ecosystem there.

Bryan Creek Corridor: O40-3, O50-3, O60-3

Having been a member of the MNWC for over 25 years, I have witnessed the "Club" as it have strived to maintain the fragile ecological/environmental balance with "mother nature". This area is the "head waters" for several streams including Bryan Creek, Clear Creek. these "head waters" determine the ecology downstream. There are several water sheds on the MNWC property including Big Drake, Little Drake, Spear, Erickson & Crescent Lake is headwater of Bryan Creek (one of few trout streams left in U.P.) Also there are several Bald Eagles nesting in this area.

Dewey: P40-3 and C30-3

I have been a member of the Michigan North Woods Club for over 25 years. We have been diligent in preserving wild life habitat for loons, Sand Hill Cranes, moose and wet lands & swamps. The environment in these areas is extremely fragile and we have tried our best to be "Nature friendly" to preserve these areas. There are not many "Pristine" left unfortunately. The wetlands in this area have been here for many years and we hope to preserve for our special Wildlife to propagate. MNWC was founded for the conservation of forested and aquatic systems of which we have several, whole water sheds are included in property (9000 + acres) and large animals with large home ranges ie walaes, eagles, moose and cranes exploit the MNWC as a contiguous refuge. The Eniclsor pathway cuts in two the area protected by the club.

Thanks for your time

This area hosts populations of sand hill cranes, blue herons, bald eagles, beavers, moose & a variety of turtles & plants. Infringements on wetlands and lakes are unavoidable in the proposed "Dewey Lake" pathway. These wetlands act as a valuable habitat for plants, birds and moose and the combination of forested landscape and wetlands act as a combination-regulate both streamwater flow and stream water quality. The watershed that surrounds and includes both Dewey Lake and Dewey swamp create the headwaters for Camp Eleven Creek, and this creek ultimately flows into the Escanaba River. Changes to the headwater system are particularly meaningful - they affect the integrity of everything downstream. Due to the reliance headwater system on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth compressing machinery will also be detrimental to this system and those downstream.

Sincerely,

To Whom it may Concern,

When considering the placement of the high voltage lines through the MNWC as (1) Bald and Golden Eagle Protection Act prohibits activities that disturb (active & inactive) nesting sites of which we have throughout the MNWC and (2) Endangered Species Act - among the animals identified by the ESA are the following, which may reside in or travel through the MNWC Canadian Lynx, Kirtland's Warbler and Cougar which are either threatend, endangered. More than 600 species of plants and animals are listed as threatened, endangered or special concern in Michigan, in large part because of habitat loss. Most of these rare and declining species occure on private land. The primary goal of the Landowner Incentive Program is to help private landowners create and manage habitat for species that are rare or declining. In 2011 the MNWC and the Michigan DNR entered into a contract to establish an Incentive Program at the MNWC in the Green Hills area, which would be impacted by the Bryan Creek Corridor (O40-3; O50-3; O60-3) proposal we believe other areas of MNWC qualify for the program as well.

Sincerely

Jeff Randall

Subject: Comments Regarding Dewey: P 040-3 & C30-3, Bryan Creek Corridor O40-3, O50-3, O60-3

To Whom It May Concern,

It has come to my attention that there is a proposed High-Voltage Power Line that will run through the property that contains Dewey, Erickson, Big Drake, and Little Drake Lakes.

I would like to express my concern over the proposed route, as these power lines will impact the ecosystem this property in a way that is not ecologically sound.

The Michigan North Woods Club (MNWC) is a nonprofit, membership based conservation organization. Since it's founding in 1926, the MNWC has consistently devoted its time and resources to the conservation, reforestation and propagation of fish and game on our grounds. The construction, maintenance and operation of the proposed high-voltage power line will threaten the very existence of the ecosystem we have committed nearly a century to protecting.

Also, I believe that the route on the eastern part of the MNWC (Code numbers O40-3, O50-3, O60-3) will conflict with our agreement with and a commitment to the Michigan DNR's Private Land-Owner Incentive Program (a state conservation that partners with local owners to reintroduce native tree species throughout the state) in the Green Hills. The other route (P40-3 and C30-3) would likely interfere with any future participation in this program. The pathway that would infringe on the Green Hills also includes large stands of mature hemlock that are rare to the Upper Peninsula.

Building the proposed lines would be detrimental to the rare and beautiful ecosystem of the MNWC. I urge you to reconsider the placement of this project.

Thank you for your consideration,

Sam Ritchey

Comments are the same as I articulated in the Bryan Cr. Corridor. It seems that with all at stake the MNWC has strived for for nearly 90 yrs. as a conservation focused group that an easier route around this sensitive property w/ all the wildlife, fish, plant and forest values, the people involved, MI DNR, the assistance from colleges in MI in an advisory capacity, etc. that the smart money would find a less contentious route.

Comment Date: 07/24/2012, by John Schindler

Seq:

Communication Type: Formal Comments

PDF Name: C_JSchindler072412.pdf

Bryan Creek Corridor: O40-3, O50-3, O60-3

MNWC is a contiguous acreage devoted to conservation of forest and aquatic habitats. Many spp. of birds fish and other animals utilize this track. Eagles nest on some of the lakes, the Kirtland warbler may be found here (a T&E spp.), the MI DNR is involved in trying to establish moose and various native tree spp. Because of potential and real impact to the habitat by the proposal, it would seem prudent to not impact the MNWC property and find a way to avoid probable litigious actions and go around the MNWC lands.

Bryan Creek Corridor: O40-3, O50-3, O60-3

The MNWC is a conservation organization which is host to numerous animal species, including the endangered Kirtland's Warbler. If the transmission lines were to be placed on MNWC land, it would disturb the jack pine areas which are a critical need/resource for this endangered species. If the transmission lines were to go through, it would open up the land in which the club has spent the last 86 years to preserve & work at conserving for the future. In the past people use utility lines for travel & sometimes detrimental for the land & sensitive/critical wildlife needs.

Please do not place the utility lines on the MNWC property. MNWC has & will continue to work hard to conserve & promote the wonderful wildlife of the Upper Peninsula.

The MNWC is a conservation organization which is host to numerous animal species including the endangered Kirtland's Warbler. If the transmission lines were to be placed on MNWC land, it would disturb the jack pine areas which are a critical need/resource for this endangered species. If the transmission lines were to go through, it would open up the land in which the club has spent the last 86 years to preserve & work at conserving for the future. In the past people use utility lines for travel & sometimes detrimental for the land & sensitive/critical wildlife needs.

Please do not place the utility lines on the MNWC property. MNWC has & will continue to work hard to conserve & promote the wonderful wildlife of the Upper Peninsula.

Dewey P40-3 and C30-3

The wetlands that the Dewey Project would affect area a valuable habitat for eagles, moose and a variety of birds. I believe this project would be a detriment to these wetlands and the wildlife. The power lines would threaten the eagle nesting sites. The herbicides would effect the plant life that the wildlife & fish need for survival.

The Michigan Northwoods Club (MNWC) is committed to the conservation of forested & Aquatic systems. This area hosts population of sand hill cranes, blue herons, loons, beavers, moose, eagles, turtles as well as a wide variety of plant communities. The eastern most pathway potentially infringes on 3 watersheds, all of which have their headwaters within the property of the club. Changes to the headwater are particularly meaningful, they effect the integrity of everything downstream. We are very concerned about the effects on our lake, plant, & wildlife. We believe the powerlines & associated activities will threaten eagle-nesting sites of which we have several.

Dewey: P40-3 and C30-3

The Michigan Northwoods Club (MNWC) has been a steward to the watersheds that run thru their property since 1926. They have taken great care to conserve & restore the property of MNWC by conservation, reforestation & propagation of fish, game & trees. The construction maintenance of the proposed hi-voltage power line will threaten the very existence of the ecosystem that the MNWC has spent the last 84 years to protect.

Comments:

Hello, I have the 25.6 acres off of Highway X in Middle Inlet.

I only just got this notice. (9/2012). I have not received any other notices.

The maps look like you are going through my entire land!! I cannot attend the October 4th meeting in Crivitz as I do not have enough time to take off work and I live in Illinois. How can non-residents be part of the process? Are there teleconferences? Are there notes of the meetings?

I need to understand what is going on. The maps on line do not give enough detail but considering that my property represents the widest line on the entire map and judging by the location, I am assuming you are taking over my entire property which I use to hunt and fish and was expecting to build a home and someday leave the land for my son. The property has a class A Trout Stream through it and was willed to me by my parents and it has been in my family since I was a child (40+ years). Your project will render my land worthless and not useable. Where will I find land of like kind and quality and why are you going through my land and not the other side of the road or along the highway which would seem an obvious route rather than take my entire land.?

Further, what sort of compensation can you possibly offer for me to find an equally large piece of property in just as good location??? It is very disheartening that you go to your mailbox one day and find that you have been bamboozled out of your inheritance. I do not have much but I have the land and now I do not even have that.

I own the land and my wife Diana has left her email and work phone number.

We will be up in the Crivitz area sometime during the week on October 15th. Who do we meet and talk to up there to walk us through our land to envision what sort of damage this will cause?

Do you have surveyors on hand? I expect a response and considering again, that my land represents the widest patch by far on the ENTIRE map, I expect that you would appreciate my position and have someone contact me to make such arrangement available during that week.

Upset Property Owner,
Kevin and Diana Sharp

These wetlands provide a habitat for plants, birds, moose, beavers, & turtles which along with the forest and wetland regulate stream water flow and quality which flow eventually into the Escanaba river. Heavy earth moving machinery will be a detriment to the ecological system. The MNWC property owners in this area have been committed to conservation of forested and aquatic systems. As frequent travelers in the U.S. we find this area to be exceptional. It's lakes, streams and forest are pristine and those involved strive to keep it that way. We urge you not to disrupt this area.

Bryan Creek Corridor: O40-3, O50-3, O60-3

It is of great concern that the herbicides used to maintain the transmission line easement area will have an effect on the lakes, wildlife & plants. The heavy equipment use in this project will be a detriment to the area & down stream. Power lines pose a threat to eagle nesting sites which are several in number.

The MNWC and its friends have been dedicated to conservation of it's forest, lakes, streams, birds, plants, moose, turtles etc. Having traveled extensively I find it to be well protected and respected by those living there. This area should not be disturbed.

As a life long member of the MNWC, I have participated in the preservation and protection of this property. We have worked with the State of Michigan through many agencies to maintain our property for the protection of many unique and threatened species. The wetlands in the above mentioned corridor are irreplaceable. The wildlife that thrives there, sand hill cranes, blue herons, eagles, moose, turtles, among others will be significantly disturbed by the infringement of the powerline through the area. Wetlands are protected by the State and the National government. There are other options that will not disturb this ecologically diverse area.

Bryan Creek Corridor: O40-3, O50-3, O60-3

As a partner with the Michigan DNR, the MNWC is managing a large area of protected tree species. In this old growth hardwood area, there are unique plants and animal habitats that we are committed to through our founding principles. For nearly a century we have focused on the conservation, reforestation and propagation of this land and included waterways. The disruption of the natural state will threaten many animal habitats and plant environments. Introduction of foreign materials could cause the end of species we have foster for so many years. It seems unimaginable that the state and antional governments would allow such destruction to precious ecosystems when there are highways and powerlines existing that have already compromised the areas they go thru.

I am from Michigan Northwoods and am heartily opposed to this project as I believe it would interfere with what we, as owners, are trying to achieve in the ecology of the land; its wild animals, fowl and fish. Some of these animals and fowl are becoming extinct in areas and we are trying to save them by providing nesting areas. Wetlands and continuous range habitat for the wild life.

I believe this project would severely hinder these efforts.

Thank you for considering this.

I believe it would truly be a mistake to put in your proposed high-voltage power lines in this corridor. Just the construction, operation and maintenance alone would interfere with all the streams and lakes we are trying to create and improve upon. Also it would hinder in the quality and quantity of the streams and lakes.

Thank you for considering!

This corridor will create a three football field wide monoculture clear-cut through a 86 year old naturalized area that was brought back from the early 1900's clear-cut logging to a habitat for threatened and endangered species and protected nesting sites for bald and golden eagles (21 square miles for cougars and 3 mile radius of nest for eagles). Travel corridors for all species of wildlife will be either severely disturbed or destroyed by the wide monoculture clear cut corridors. Chemical control of the invasive plant and animal species from the ground disturbing construction equipment and the in and out driving and flying maintenance equipment can and does spread to adjacent lakes, streams, plant communities and wildlife and fish. The headwaters of three streams that feed into the North Fork of Escanabe will be impacted from ground disturbance and soil compaction.

The visual impact of the right-of-way and the transmission line supports will stand out like a foreign sore thumb.

Proposed Routes

X Dewey P40-3; C30-3

The Michigan Northwoods Club, a membership-based nonprofit conservation organization, has, since its founding in 1926, devoted considerable time and resources to the conservation, reforestation, and propagation of native species in the wetlands and forested areas currently threatened by this project.

Wetlands in this area host populations of sand hill cranes, blue herons, loons, beavers, moose, numerous varieties of reptiles and amphibians, and untold varieties of plant life. Forests provide habitat and nesting

sites for many species including Cougar (threatened), Canadian Lynx (threatened), Kirtland's Warbler (endangered), and a significant population of nesting Bald Eagles. The impact of the Bay Lake project in this area will violate the Wetlands Protection Act, the Bald & Golden Eagle Protection Act, and the Endangered Species Act.

RE: Dewey: P40-3 & C30-3; Bryan Creek Corridor: 040-3, 050-3 and 060-3

Dear Sir or Madam:

We are very concerned about American Transmission's plan to install transmission lines through the Michigan North Woods Club. Not only will these lines disturb several of the eagle-nesting sites, but it will impact our lakes and wildlife from the herbicides used to maintain the lines. As it is, the maintenance vehicles used to install, operate and maintain the lines will be a burden to our ecosystem. Since 1926 our Club has dedicated itself to conservation efforts and I would hate to see it disrupted by transmission lines.

Our Club would appreciate it if you would reconsider moving the lines to an area outside of the Club's property.

Sincerely,
Leland M. Stahelin

The Club exists since 1926 and is a nonprofit organization - only interested in the conservation of environment; and safe haven for wildlife, plants, forests fresh pure water & streams, free of pollution for fish to thrive.

The interference of bringing in High Voltage wires is totally unexeptable. Another point of great consideration: that we not only have cugar, moose & bear, we also have found Indian Artifacts. The clearing of such a wide strip of land would invite more poachers & tresspassers we already have to deal with.

RE: Dewey: P40-3 & C30-3; Bryan Creek Corridor: 040-3, 050-3 and 060-3

Dear Sir or Madam:

As a resident of the Michigan North Woods Club I am very concerned about the impact of high voltage power lines on our rare and unique species. In accordance with the Michigan Wetlands Protection Act, it is required that a permit be obtained from the State of Michigan in order to begin any activity within the wetlands. This includes permits for construction, operation and maintenance of any use or development in a wetland. Aside from being required to obtain a permit, the power lines installation will also degrade streams and stream crossings with debris from the installation. The debris will also reduce the ability of some species to wade through the water and will stunt the growth of plants or their existence.

Please reconsider your plans to destroy 86 years of our Club's hard work and effort and move the power lines somewhere else.

Sincerely,

Leland M. Stahelin

RE: Dewey: P40-3 & C30-3; Bryan Creek Corridor: 040-3, 050-3 and 060-3

Dear Sir or Madam:

I am writing to you as a concerned member of the Michigan North Woods Club (the "Club"). For 86 years our Club has been devoted to the conservation and reforestation of wildlife. The installation of high voltage power lines will threaten the more than 600 species of plants and wildlife due to habitat loss. Our Landowner Incentive Program's goal is to help private landowners create and manage a place for endangered, rare and declining species. Many of the animals listed on the Endangered Species Act, such as the endangered Cougar and Kirtland's Warbler are residents of the Club. We would hate to see such animals become extinct due to power lines. Having power lines will not only disturb the endangered species and plants, but will cause more unauthorized traffic through the Club.

Please reconsider your installation and think about how this can destroy years of hard work made by the Club.

Sincerely,

Michael A. Stahelin

Re: Bay Lake Project.....Dewey Lake Corridor: P40-3 & C30-3

This letter is our addendum to your business reply card soliciting comments on the listed project;

* The MNWC* is a unique property. For 86 years, its owners have worked hard to make it as "environmentally pure" as possible. This effort has been facilitated by the fact that its 9000 acres are largely contiguous, that it has a 37 mile (wire) fence, that it has few points of ingress and egress, and consequently that it can be effectively monitored and managed by one resident caretaker. We know most of the current owners of this property and have watched their exemplary work for more than sixty years, including: general conservation, re-forestation, continuing development of fish and wildlife, limited use of herbicides, and fire prevention. There are few such places in the entire state of Michigan..

* Routing the Dewey Lake Corridor) of the Bay Lake Power Transmission Line Project across MNWC property will eliminate something that is unique and will totally undo this 86 years of work !!!

* Effectively, implementing the Bryan Dewey Lake Corridor will create a 150 foot wide pathway [from the southern boundary of the property to the northern boundary, which is a distance of about 3 1/2 miles] This increases the total MNWC Boundary from a total of 37 miles to a total of more than 40 miles. Worse yet, it creates myriad points of entry and egress to the property. For anyone with an all terrain vehicle or a snowmobile, it creates vast opportunities for poaching, dumping, and starting fires.

* Beyond the obvious negative effects on : a) wild-life in general, b) endangered species in particular, c) plant-life, and d) wetlands; implementing the Dewey Lake Corridor represents a confiscation of private property. The area of the 150 foot wide corridor is only a small fraction of the total area involved. The important confiscation is that what has been created will never exist again !!!

* We understand and support the need for utility projects such as this. Inherently the decisions that must be made involve "trade-offs." Our concern is that the decision makers in this situation need to recognize the uniqueness of this property and that they should not eliminate something that will never exist again.

We sincerely hope that you will choose an alternative that is more environmentally advantageous than this one.

Re: Bay Lake Project.....Bryan Creek Corridor: O40-3, O50-3, O60-3

This letter is our addendum to your business reply card soliciting comments on the listed project;

* The MNWC* is a unique property. For 86 years, its owners have worked hard to make it as "environmentally pure" as possible. This effort has been facilitated by the fact that its 9000 acres are largely contiguous, that it has a 37 mile (wire) fence, that it has few points of ingress and egress, and consequently that it can be effectively monitored and managed by one resident caretaker. We know most of the current owners of this property and have watched their exemplary work for more than sixty years, including: general conservation, re-forestation, continuing development of fish and wildlife, limited use of herbicides, and fire prevention. There are few such places in the entire state of Michigan..

* Routing the Bryan Creek e Corridor) of the Bay Lake Power Transmission Line Project across MNWC property will eliminate something that is unique and will totally undo this 86 years of work !!!

* Effectively, implementing the Bryan Creek Corridor will create a 150 foot wide pathway [from the southern boundary of the property to the northern boundary, which is a distance of about 3 1/2 miles] This increases the total MNWC Boundary from a total of 37 miles to a total of 44 miles. Worse yet, it creates myriad points of entry and egress to the property. For anyone with an all terrain vehicle or a snowmobile, it creates vast opportunities for poaching, dumping, and starting fires.

* Beyond the obvious negative effects on : a) wild-life in general, b) endangered species in particular, c) plant-life, and d) wetlands; implementing the Bryan Creek Corridor represents a confiscation of private property. The area of the 150 foot wide corridor is only a small fraction of the total area involved. The important confiscation is that what has been created will never exist again !!!

* We understand and support the need for utility projects such as this. Inherently the decisions that must be made involve "trade-offs." Our concern is that the decision makers in this situation need to recognize the uniqueness of this property and that they should not eliminate something that will never exist again.

We sincerely hope that you will choose an alternative that is more environmentally advantageous than this one.

Bryan Creek Corridor: O40-3, O50-3, O60-3

I have been part of the Michigan's Northwoods Club for the past 30 years. We pride ourselves devotion to the natural resources of the area. The MNWC has consistently directed its time and resources to the conversation, reforestation and propagation of fish & game on our property. The contruction maaaintenance and operation of the proposed high-voltage power line will threaten the very existence of the ecosystem we have committed to protecting. We are very concerned about the effects on our lakes, plant and wildlife communities from the herbicides used to maintain the easement area of the transmission line.

Dewey: P40-3 and C30-3

The Michigan Northwoods Club is a non-for profit organization devoted to conservation and the environment. Our club is home to wolves, Bears, moose, eagles, sand crane, loons and a host of animals, birds, reptiles, insects some of which may be protected of threatened. Imposing high voltage power line which neccesitates the cutting of forest habitat, introduction of herbicides, and creation of electromagnetic fields would devastate this unique preserved wilderness. The proposed corridor also passes over Dewey lake and the Dewey lake Swamp wetlands. Since ATC is a member of the Wisconsin Green Tier Program which is committed to environmental sustainability. We believe the impact of high voltage power lines on the Michigan Northwoods Club would be devastating an irreversable

Bryan Creek Corridor: O40-3, O50-3, O60-3

During it's 86 year history, the Michigan Northwoods Club has consistantly devoted it's time resources and energy to the conservation, reforestation and propagation of fish and game on our lands. The introduction of high voltage power lines along with the clearing of trees, use of herbicides, and the introduction of electromagnetic fields would have a profound impact on the ecological habitat established by our efforts. In addition thier are three separate watersheds and their wetlands that are in the path of the proposed corridor; Bryan Creek, Clear Creek and Big Bass Creek. Also our participation in the Michigan Private Land Incentive program to reintroduce native tree species is in the path of this corridor.

To Whom It May Concern:

I am writing in regards to the proposed Bay Lake Project, and high-voltage power line that would run through the area around Dewey Lake at the Michigan Northwoods Club.

I am someone who admired the conservation goals of the Michigan northwoods club for many years and was born and raised in Michigan and still have family roots in the Upper Peninsula of MI (Robert Brook). The Michigan Northwoods Club is clearly a place whose principles are founded upon honoring and preserving natural habitats that I have respected all my life.

I am very concerned about the detrimental effects the project would have on the lakes, plant communities and wildlife in the area.

In terms of the Brya Creek Corridor, (O40-3, O50-3, O60-3) this part of the woods is home to delicate populations of sand hill cranes, blue herons, loons, moose, eagles, loons, all manner of turtles as well as a wide variety of plant life. The easternmost pathway potentially infringes on there watersheds, all of which have their headwaters within the protection of the Club's property lines. The first watershed, one that includes Big Drake, Little Drake, Spear, Erickson and Crescent Lake, is the headwater for Bryan Creek. The second watershed includes Trout Lake, and is the source for Clar Creek. The third watershed includes Little Bass, Big Bass and Bass Lake Creek. Clear Creek and Bass Lake join Bryan Creek (Bass lake Creek doing so well well south of MNWC property), and this larger version of Bryan Creek ultimately flows into the Escanaba. Changes to headwater systems are particularly impactful. They affect the integrity of everything downstream. Because of the reliance of the headwater systems on the surrounding plant community, there is no such thing as an ecologically friendly herbicide in this context, and heavy earth-compressing machines will also be detrimental to this system and those downstream.

The construction, maintenance and operation of the proposed high-voltage power line will threaten the very existence of the ecosystem that has been protected there for 86 years.

I am deeply concerned about the impact the proposed plan would have on the environment, and hope the plan will be reconsidered in honor of conservation, reforestation and propagation of our wildlife.

Sincerely,

(signed)

Subject: MNWC Power Lines

Hi, there. As a member of the Michigan North Woods Club, I am writing to express my concern regarding the discussion of power lines potentially being run through the club's property. I first came to the MNWC when I was 19. Admittedly, I was a bit of a "fish out of water" when I first started coming, as I did not grow up as an "outdoor girl." However, the beauty of this piece of land, which is largely untouched and unaffected by "man," has fostered a new found appreciation for nature in me over the years. Now, as a 37 year old woman, I enjoy bringing my own kids to the family cottage so they too can learn about nature and the importance of preservation. There is no denying that this place is very special to its inhabitants - both human and non-human alike! I urge you to please reconsider building power lines on this sacred piece of land.

Respectfully,

Cheryl Winkelmann

Subject: Bay Lake Project at the Michigan North Woods Club (MNWC)

I have been going to the Michigan North Clubs since I was born in 1972. My grandfather Edwin Hausermann became a member at the club in 1969. Since that time, four generations of my family have been going to the club to spend time together, swim, fish, ski, hunt, etc. The club was founded in 1926 and was once much larger than it is today. During the depression, the club lost approximately 3/4 of its land value, leaving the land we have today. The club was founded as a fishing & hunting club with strong social ties. Today those values continue with more and more emphasis on conservation. With 10+ lakes on approx. 10,000 acres, the land is a relatively pristine preserve. The vast majority of the land is undeveloped and supports wildlife such as moose, wolves, eagles and deer to name a few. One of the great things about being at the club with friends and family is the remote and quite feel of being in the northwoods. Many times while away from the cabins you do not see another person, car or boat. Sometimes you do not even see or hear an airplane. You feel as though you are in a different time. I feel as though the proposed paths of the power lines through the club would be in direct contrast with everything this club and its members stand for. I implore you to remove the two Michigan North Woods Club sites from consideration.

I thank you in advance

Chris Winkelmann

Bryan Creeek Corridor: O40-3, O50-3, O60-3

I believe the impacts from traffic necessary to operate & maintain the transmission lines will be detrimental to the wildlife habitat the club has worked so hard to protect.
