1		TRANSCRIPT OF PROCEEDINGS
2		(Discussion held off the record.)
3		EXAMINER NEWMARK: We have Pat Herning.
4		Come on up.
5		PAT HERNING, PUBLIC WITNESS, DULY SWORN
6		EXAMINER NEWMARK: Give us your comment.
7		DIRECT TESTIMONIAL STATEMENT
8		MS. HERNING: Mr. Montgomery and
9		Mr. Costello and Ms. Nowak.
10		COMMISSIONER MONTGOMERY: I'm the only one
11		of the three here.
12		EXAMINER NEWMARK: Yeah. Just so you
13		know, we have Chairperson Montgomery is the only
14		Commissioner present today. The other two people
15		are Commission staff helping out, but all
16		Commissioners will read the transcript.
17		I do need to mention that Commissioner
18		Castillo will not be a commissioner by the time this
19		case gets to the Commission. The new person his
20		term expires at the end of March. A new person will
21		be appointed. Governor appoints Commissioners, and
22		the Senate confirms Commissioners. So at this point
23		we don't know exactly who that person's going to be,
24		but just wanted you to know because you mentioned
25		their names.

	2/3/2015	Transcript of Proceedings, Volume 5 Page 4
1		MS. HERNING: Okay.
2		EXAMINER NEWMARK: Go ahead. And if you
3		can also speak up.
4		MS. HERNING: And I'm also speaking for
5		everybody here besides myself. I feel that
6		everybody here is here for a reason.
7		And I live in Morgan, and I live on County
8		Road C, and so I'm just two houses away from the
9		intersection of E and C. And I've lived there for
10		20 years.
11		And my deep concern with ATC with the high
12		voltage wire of 345 in Morgan is my health, and also
13		property value decrease, and also when it comes time
14		to sell my house for a future buyer. So I hate to
15		scare away a desirable buyer because of this in my
16		area, probably about 700 feet away from the back of
17		my house, our property line. Also I have a concern
18		with the increase of the electrical bill to benefit
19		ATC and to help other customers out of my local
20		area.
21		My health concern is I'm at high risk
22		because I had a kidney transplant. I have to take
23		medications for the rest of my life to suppress my
24		immune system because of the transplant. So this is
25		nothing that's ever going to change for me.
	• • • • • • •	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 5
1		And right now I go into the dermatology
2		doctor every three months, and it started
3		immediately since after my transplant. I had no
4		trouble before that. Actually, if you develop
5		develop skin cancer, small spots, your immune system
6		fights it off, but it doesn't for me. I go in every
7		three months, and I have a problem area that has to
8		be treated, and I have end up having having
9		skin surgery.
10		Magnetic fields I want to talk about, or
11		EMF. EMF stands for electrical magnetic fields, a
12		type of radiation that takes the form of waves.
13		Magnetic fields easily penetrate walls and bodies.
14		It penetrates cement, wood, and as of now there's no
15		protective shield available.
16		Since the damage is cumulative and
17		permanent, there's no good chance you won't know
18		there's a good chance you won't know you developed a
19		serious condition until it's too late to reverse.
20		Thousands of scientific studies proven at
21		least four decades ago have continued to prove that
22		EMFs are undeniably and often devastatingly harmful
23		for the bodies of humans, trees, the atmosphere.
24		I have a study from Ohio University, Are
25		Electromagnetic Fields Hazardous to Your Health. I
	L	

	2/3/2015	Transcript of Proceedings, Volume 5	Page 6
1		got that off of the internet website.	
2		Other studies have focused specifically or	1
3		the suspected connection between EMF exposure and	
4		cancer. In 1979, two universities of Colorado	
5		researchers pored through childhood mortality rates	
6		in the Denver area and correlated long-term exposure	2
7		to weak EMFs with a higher incident of cancer.	
8		Seven years later, a researcher, a Swedish	
9		researcher, found the same relationship between EMF	
10		exposure and cancer rates among children in	
11		Stockholm.	
12		Now, I'm a conscientious citizen, and I	
13		turn off lights in my home when they're not needed.	
14		I use electricity efficiently. I have energy	
15		efficient light bulbs, appliances, a furnace we put	
16		in. This past summer we added insulation. We had	
17		it blown in in our house, and we added replaced	
18		new windows that were energy efficient, and we	
19		installed better siding that was more energy	
20		efficient, and I just think that yeah, like I	
21		said, this is going to be going in about 700 feet	
22		behind our house. So when I'm out in my yard, I'm	
23		going to be affected I feel, and my and like I	
24		say, I have no immune so I feel like cancer	
25		cancer will could affect me. I have a high case	

	2/3/2015	Transcript of Proceedings, Volume 5	Page 7
1		for that.	
2		And there's a farm not too far from us,	
3		and they have it's a farm that goes 24-7, and	
4		they have a lot of you can make heat, they're	
5		looking into it, with digestive manure systems with	
6		electricity, and I've seen that on T.V. on PBS, and	
7		they're looking for places to put it, and it could	
8		be put to good use. And there's dams, there's two	
9		dams in Oconto Falls and one in Stiles that could be	
10		looked into, and people are decreasing there are	
11		studies that have been done that people are	1
12		decreasing their electricity.	
13		So I'd just like to thank you for	
14		listening to me and for taking the time to come up	
15		here. We all just really appreciate it. Thank you	
16		for letting me speak.	
17		EXAMINER NEWMARK: Great. Thank you,	
18		ma'am.	
19		(Witness excused.)	:

	2/3/2015	Transcript of Proceedings, Volume 5 Page 8
1		EXAMINER NEWMARK: Okay. We have Janice
2		Sutrick.
3		JANICE SUTRICK, PUBLIC WITNESS, DULY SWORN
4		EXAMINER NEWMARK: Have a seat. Go ahead.
5		MS. SUTRICK: Do you mind if I stand?
6		EXAMINER NEWMARK: That's fine.
7		DIRECT TESTIMONIAL STATEMENT
8		MS. SUTRICK: My name is Janice Sutrick.
9		I live at 8687 County Road E in the Town of Morgan.
10		My husband, Tony, and I live by ourselves.
11		I live in a ranch home on the family farmland. My
12		home is less than two-tenths of a mile from the
13		right-of-way for the 345 high voltage power line. I
14	-	was raised in Morgan for 20 years, moved away for
15		40, and returned in '98. My husband and I are
16		retired.
17		I oppose the Public Service Commission
18		approval of the high voltage transmission option on
19		all routes. I support the low voltage transmission
20		option. I am opposed to any new right-of-ways and
21		support the use of existing right-of-ways.
22		I own an average family ranch home. We
23		use electricity the same as other family homes. We
24		have energy-rated appliances. I do not have any
25		particular program. I work within energy savings,

	2/3/2015	Transcript of Proceedings, Volume 5 Page 9
1		but we do use the new type bulbs.
2		From the high voltage lines, I'm concerned
3		about the effects of electrical magnetic fields and
4		stray voltage from these big wires. I am also
5		concerned about how safe this high voltage is with
6		my neighbors and their medical devices. Nowhere am
7		I guaranteed my land and my drinking water will be
8		protected.
9		Many people at the town hall meetings
10		spoke about friends with land that was damaged. How
11		do we know if we are guaranteed full protection from
12		the permanent damage that's left by ATC? I know
13		there's no guarantees for anything, but I'm trying
14		to do the best with how I feel.
15		Thank you.
16		EXAMINER NEWMARK: Okay. Thank you.
17		(Witness excused.)

1	1	EXAMINER NEWMARK: Irene Straub.
2		IRENE STRAUB, PUBLIC WITNESS, DULY SWORN
3		MS. STRAUB: Well, this is just something
4		I wrote.
5		EXAMINER NEWMARK: Okay. That's fine.
6		Perfect.
7		DIRECT TESTIMONIAL STATEMENT
8		MS. STRAUB: Okay. Hello. My name is
9		Irene Straub. I am a widow, and I also have a
10		pacemaker and other heart conditions. I spend a lot
11		of time at my son's house and work in the garden and
12		on the fruit trees. I enjoy the peacefulness and
13		the quiet that I get there.
14		I would be scared and afraid to go outside
15		if there was power lines right above me crackling
16		and buzzing. I do not want to take any chances that
17		my pacemaker might fail or be damaged by these high
18		power lines. No one knows the fear that I am going
19		through right now wondering if my life will be
20		changed because of this project.
21		Can you guarantee 100 percent that there
22		is no danger to me being underneath these power
23		lines? Would you sign a document saying there's no
24		damage?
25		I am against this project and ask you to

	2/3/2015				Transcrip	ot of Pro	ceedin	gs, Volum	ne 5		Page 11
1		not	to	go	through	with	it.	Thank	you.		
2					EXAMINER	NEWM	IARK:	Great	. Thank	you	very
3		much	ì.

1		EXAMINER NEWMARK: We have Robert Straub
2		next.
3		ROBERT STRAUB, PUBLIC WITNESS, DULY SWORN
4		EXAMINER NEWMARK: All right. Go ahead.
5		DIRECT TESTIMONIAL STATEMENT
6		MR. STRAUB: My name is Robert Straub.
7		That was my mom. I live at 8586 Delzer Lane in the
8		Town of Morgan.
9		And I was given a letter sent a letter
10		about the possibility of putting some lines through,
11		which when I called up, they confirmed by my address
12		that the power lines are actually going to go about
13		20 feet from the west side of my house. I own two
14		acres. My house sits at the west side of the
15		property, and there's probably about 40 feet from
16	1 - - -	the west side of my house to the property line.
17		At that part over there, there was nothing
18		there. There was nothing on the whole property. I
19		put in over 130 trees from tiny ones that have grown
20		now. On that west side I have about eight fruit
21		trees, and I have a 50x50 garden, which as my mom
22		was talking about, she enjoys coming over and
23		working in the garden, working on the trees.
24		This line would go right over the top of
25		that area and over pine trees that I have grown.

	2/3/2015	Transcript of Proceedings, Volume 5	Page 13
1		There's hickory trees over there, all of which are	
2		going to get taller and taller.	
3		My concern is, you know, having these	
4		power lines there, the crackling, the buzzing, you	
5		know, that that disturbs the whole peacefulness	
6		and quietness of the area. I didn't move out into	
7		the country to be next to that stuff. And actually	7
8		when I bought my property, I was looking at others,	
9		and I found four vacant lots on a dead end road,	
10		farmland all around me, and never would have though	it
11		that I would have to worry about anything like this	3.
12		I made sure with the realtor and the	
13		owners that when they put the power in, their	
14		thoughts were they were putting it underground from	ı
15		County C to my home as far as the power that	
16		electrifies our homes because I said I would not	
17		live there if there were going to be power lines	
18		that I had to look at and worry about. So that was	\$
19		a main concern of mine.	
20		The other thing I'm worried about is, you	L
21		know, when my mom does come over, she does have a	
22		pacemaker. She's 93 years old, and there's no	
23		guarantees that these magnetic impulses or spikes i	.n
24		electricity and pulses would not affect that	
25		pacemaker. I can go on about different reports and	L

	2/3/2015	Transcript of Proceedings, Volume 5 Page 1	.4
1		stuff that say it will and other reports that say	
2		there's no 100 percent guarantee, but my fears are	
3		the same.	
4		And I have a cell phone. That's all I	
5		have. I don't have a landline. With Cellcom, my	
6		provider, there's a tower seven miles on each side	
7		of my house. I'm in what they consider to be a dead	
8		zone, or close to it. You get a lot of dropped	
9		calls. It's hard sometimes to receive calls.	
10		What's the guarantee that now having these lines, if	
11		they would come in, that that would not affect my	
12		cell phone?	
13		I call my mom up every day at 9 o'clock to	
14		make sure that she's all right because she lives in	
15		Pulaski at her apartment. I have to be able to call	
16		her. I cannot have any interruption that might	
17		happen because of these power lines.	
18		I also have internet that's wireless,	
19		comes off the Wahl tower over here off of Wahl Road.	
20		I need that for my business. I'm a sales agent for	
21		Aflac Insurance. I have to make sure that that's	
22		not going to be disrupted either, and I feel being	
23		20 feet away from these power lines with magnetic	
24		impulses and spikes, you know, nobody's going to	
25		guarantee me, or can they, that I will not have any	

	2/3/2015	Transcript of Proceedings, Volume 5	Page 15
1		interruption.	
2		I have health concerns about cancer. You	
3		know, can you guarantee me that it will not impact	
4		me or cause any cancer? And I can't fight in court	
5		with lawyers in case I would get a cancer to say I	
6		think it was because of the power lines, you know,	
7		but yet I would be afraid to think that it probably	
8		would have been.	·
9		I also I only own two acres, but yet I	
10		would have to retitle my property to allow an	
11	2	easement to this tower. And again, there's nothing	
12		that says that somebody can't come on my property at	-
13		2:00 in the morning to maintenance it.	
14		I haven't heard anything concrete that	
15		says they're going to use safe chemicals. You know,	,
16		I'm real happy with the water that I get from my	
17		well because it's awesome water. I can take and	
18		wash a glass, turn it upside down when it dries,	
19		there's no water marks. I have very good drinking	
20		water, and there is no chemicals in it. But who's	
21		going to tell me that I might not have something	
22		change because of this impact from these towers?	
23		Loss of value. I used to be a realtor for	<b>c</b>
24		eight and a half years. I showed a lot of homes to	
25		people, and one of the things they did not want when	ı

	2/3/2015	Transcript of Proceedings, Volume 5 Pa	ge 16
1		a property came up that had towers or things like	
2		this, airports, they didn't want to live by them.	
3		So if power lines were to come up by me and I would	
4		have to sell because I would not live there, who's	
5		going to want to buy my property with an easement	
6		and with power lines? You know, I'm going to lose	
7		value on my property that way.	
8		There's going to be construction. There's	
9		going to be noise. There's going to be no peace.	
10		There's also a lot of geese that land right on the	
11		other side of my property in the field, in Delzer's	
12		field, that take a break from their journeys and	
13		their migrations. They stop there to take a rest	
14		before they fly. Who's going to say that these	
15		lines aren't going to impact their line of travel	
16		and their migration routes? They might change that.	
17		There's also a lot of bees. The bees come	
18		in, they pollinate my garden and my trees. You	: ; ;
19		know, I don't know what effect it has on wildlife	
20		and bees and stuff like that.	
21		I don't know if anybody would want to live	
22		next to a house that had a power line 20 feet away.	
23		And although I'm not against any kind of	
24		improvements that we have to make, but prove to me	
25		that we really need it because I have energy	

I	2/3/2015	Transcript of Proceedings, Volume 5 Page 17
1		efficient windows, I have 2x6 construction. You
2		know, my heat bills are usually about \$70 a month in
3		the wintertime. I have energy efficient appliance:
4		washer, dryer, toaster, coffee maker. Everything
5		that I could do to save energy I've got.
6		If this line goes through, are my rates
7		going to get risen because who's going to pay for
8		this, you know. And now my energy bill, what, could
9		it double? Could it triple? I don't know, but at
10		that point in time, I wouldn't know that I could
11		afford that. You know, I don't make a lot of money
12		selling Aflac, and it's just the way it is.
13		I've been told it's a lot safer to go
14		underground with these lines, but it's about a cost
15		factor. Well, are we going to put money over what
16		impacts my life and others.
17		So in closing I just want to say I hope
18		that everybody that's involved really takes these
19		issues to heart because I consider my house to be my
20		castle, and I understand imminent domain but, man,
21		this is just really tough having power lines that
22		could possibly go 20 feet from my house.
23		So I do thank you for your time in coming
24		up here. So thank you.
25		EXAMINER NEWMARK: Thanks.

	2/3/2015	Transcript of Proceedings, Volume 5 Page 19
1		EXAMINER NEWMARK: Joe Jacobs. You didn't
2		check you wanted to speak, so I guess no.
3		Okay. Jayme Sellen, S-E-L-L-E-N.
4		JAYME SELLEN, PUBLIC WITNESS, DULY SWORN
5		DIRECT TESTIMONIAL STATEMENT
6		MS. SELLEN: Good afternoon. My name is
7		Jayme Sellen. I'm the government affairs director
8		for the Greater Green Bay Chamber. Thank you for
9		the opportunity to speak today on the ATC's proposed
10		North Appleton to Morgan Project, including the
11		345 kV and the 138 kV lines.
12		This proposal comes as a result of a major
13		outage that occurred in May of 2011. Subsequent
14		studies and reviews have shown that there's a lack
15		of reliability in transmission re-enforcements
16		within this region. ATC's proposal is the least
17		costly solution to resolving our reliability needs.
18		The existing transmission lines and
19		systems in Northeast Wisconsin is frequently
20		congested leaving consumers at risk for power
21		outages, such as the outage that occurred in 2011.
22		Our economy in Northeast Wisconsin is
23		heavily relied upon manufacturing, a sector that is
24		a significant user of energy for the production of
25		goods. Without reliable energy, this sector will

L

1       suffer, and our economy could suffer and result in         2       job loss.         3       So I urge the Commission to grant approval         4       of this project in a timely manner. And again, I         5       thank you for the opportunity to speak.         6       EXAMINER NEWMARK: Okay.         7       (Witness excused.)         8       EXAMINER NEWMARK: Frank Wranosky.         9       MR. WRANOSKY: I changed my mind.         10       11         12       13         13       14         15       15         16       17         18       19         20       11         21       12         22       13         23       14         24       15		2/3/2015	Transcript of Proceedings, Volume 5	Page 20
3So I urge the Commission to grant approval4of this project in a timely manner. And again, I5thank you for the opportunity to speak.6EXAMINER NEWMARK: Okay.7(Witness excused.)8EXAMINER NEWMARK: Frank Wranosky.9MR. WRANOSKY: I changed my mind.1011121314151514161717118192011212122232324	1		suffer, and our economy could suffer and result in	
4       of this project in a timely manner. 	2/3/2015	Transcript of Proceedings, Volume 5 Page 21
1		EXAMINER NEWMARK: Okay. Jennifer
2		Wilinski.
3		JENNIFER WILINSKI, PUBLIC WITNESS, DULY SWORN
4		EXAMINER NEWMARK: Okay.
5		DIRECT TESTIMONIAL STATEMENT
6		MS. WILINSKI: Dear Wisconsin Public
7		Service Commission, Ms. Nowak, Mr. Callisto or
8		whoever is taking his position, and Mr. Montgomery.
9		My name is Jennifer Wilinski, ratepayer
10		who resides at 8590 Morgan Marsh Road, and I'm here
11		today to tell you what I think about the proposed
12		Bay Lake Project, 137-CE-166, and how it could
13		possibly affect my family.
14		We moved to Morgan in 2014 not fully
15		understanding or knowing the volume of the North
16		Appleton-Morgan transmission line project. Our
17		realtor showed us a map and told us a power line may
18		come through in a couple years. The map was a
19		simple picture with no text on it. I was eight
20		months pregnant at the time with our third child,
21		totally preoccupied with a difficult pregnancy. We
22		did not research the project until later. I am and
23		will continue to be devastated if this power line is
24		constructed 175 feet from my front door.
25		In the environmental impact statement, it

	2/3/2015	Transcript of Proceedings, Volume 5	Page 22
1		says on page 91 sorry that higher-end	
2		properties are more likely to experience a reduction	on
3		in selling price other than lower-end properties.	
4		Our home is a beautiful 4,000 square foot Victoriar	ı
5		on 10 acres. We do not plan on staying here	
6		forever, but will be hard pressed to sell if this	
7		line is built next to us. Trying to sell a high-er	nd
8		property with complete aesthetic loss being next to	
9		two large high voltage power lines will be nearly	
10		impossible. We were never notified from the	
11		township or the county of this project. If I would	1
12		have been given a copy of the Environmental Impact	
13		Statement or been notified in detail, I would not	
14		have purchased my home.	
15		I asked Cindy Burtley, the docket	
16		coordinator, to request a route alternative in	
17		Morgan. American Transmission came back with an	
18		additional bump out of 175 feet. So total, if	
19		approved, this line will be 300 feet from my front	
20		door if the request was approved. This request wil	1
21		cost an additional amount of approximately \$127,000	•
22		I feel that moving the line over an additional 175	
23		feet will not fix the problems my family may have t	0
24		deal with. I also feel because the power line	
25		itself will not physically be on my land but right	

L

	2/3/2015	Transcript of Proceedings, Volume 5	Page 23
1		off the lot line, it is unfair that I have to endu	ce
2		all these possible problematic issues and have no	
3		compensation.	
4		How is it fair that the county and	
5		township receive monies for housing these major	
6		lines but someone who has to endure long-term	
7		impacts and live next to it does not receive	
8		anything?	
9		I and my family may have to deal with the	÷
10		following: potential reduction in property values,	
11		potential stray voltage, permanent aesthetic loss,	
12		possible permanent cell signal loss, soil	
13		contamination that affects our water, possible	
14		health risks associated with living close to a high	1
15		voltage line caused from EMF, health risks	
16		associated with the use of herbicide, especially	
17		with children, health risks associated with	
18		mechanical disfunction of high voltage power lines,	
19		and possibly many more negative things that could	
20		arise, including socio-economic impacts, sensitive	
21		environmental imbalances affecting our food source	
22		garden, and risks living next to a large line that	
23		is part of a very large vulnerable grid.	
24		My husband and I work from home frequentl	Y
25		via internet. I work in robotic surgery and assist	
		Reporting 1td (800) 80	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 24
1		in clinical management for an independent group of
2		six surgeons in Green Bay. My husband is Chief of
3		IT for Bank of Marinette. We need to connect into
4		the internet on a daily basis, especially in my
5		husband's area of work. He deals a lot with
6		securing connections and watching the functionality
7		of his operating computer systems.
8		In the area of Morgan, the only good
9		internet where we live is cellular. Electromagnetic
10		frequency from high voltage power lines can disrupt
11		the cellular signal by causing cell signal
12		degradation. This error rate for transferring data
13		over wireless networks increases exponentially as
14		you get closer to the line causing loss of data
15		packets and increasing the latency of the signal.
16		For both of our careers it is so important
17		to have us for us to have a good connection, and
18		I'm afraid if this line is built close to our home
19		and this happens, no one will be held accountable
20		and we will struggle with losses. I'm sorry.
21		Another concern is my family's health.
22		This concern is not just focused on effects of EMF
23		and health at the cellular level. It's also
24		mechanical failure that happens within these massive
25		structures. Last August I experienced a very scary

	2/3/2015	Transcript of Proceedings, Volume 5 Page 25
1		incident as I was driving home from work. I took
2		Webster Avenue to Tower Drive bridge in Green Bay
3		and was driving onto the bridge going northbound,
4		and I noticed up in the distance that a very large
5		power line, the metal silver structure-type power
6		line, not the monopoles, was sparked. It sparked a
7		total of four times, and on the fourth spark there
8		was an explosion. I was five to 600 feet away from
9		the spark, which was very concerning because at that
10		distance when the explosion happened, my FM radio
11		went out for 15 seconds and my ears popped. The ear
12		popping was painful, not to mention that the whole
13		ordeal was very unnerving. On that day it was very
14		humid and stormy, perhaps affecting the current of
15		the power lines. I don't know. There are a lot of
16		electrical lines in that area, especially by the
17		mills along the Fox River.
18		If that sort of thing can happen at five
19		to 600 feet away from someone and this line is
20		supposed to be built 175 feet from my front door,
21		how can this be completely safe? My children ride
22		their scooters and play ball down the driveway right
23		next to where this line is supposed to constructed.
24		They will not be able to do that without risks
25		involved.

	2/3/2015	Transcript of Proceedings, Volume 5 Page 26
1		My third child was born last March with
2		Tracheoesophageal Atresia with Fistula, meaning her
3		esophagus was non-existent. She had major
4		reconstructive surgery at two days old and spent the
5		first two weeks of life primarily in an incubator.
6		White in the NICU at Children's Hospital, I learned
7		that babies in an incubator can develop hormone
8		imbalances from the electromagnetic fields given off
9		from the incubator itself. The pineal gland in the
10		brain is super sensitive to different frequencies,
11		and my daughter did not have a problem with this,
12		but it's something that I wanted to share.
13		Being that human beings are sensitive to
14		increased EMFs. Some people are so sensitive that
15		they can develop symptoms such as migraine, skin
16		rashes, headaches, sleeplessness, anxiety and
17		depression from EMF exposure. The outcome for TEF
18		babies is usually not good. Some kids have four to
19		six surgeries before they can eat anything, and some
20		die. Miraculously my child left the hospital at six
21		weeks, which is a very short stay by NICU standards.
22		The normal earliest stay is three months.
23		My daughter is expected to make a full
24		recovery, which we are ecstatic about, but she will
25		always have some hardship and may require more

	2/3/2015	Transcript of Proceedings, Volume 5 Page 27
1		surgeries or procedures. When she gets a cold
2		virus, she usually gets pneumonia and this is from
3		her new esophagus being so short and narrow.
4		Additional secretions flow into her bronchus and not
5		down the esophagus. Her anatomy is not normal, and
6		sometimes the best option per the surgeons at
7		Children's Hospital in Milwaukee is to leave things
8		the way they are, because if you pursue for better,
9		you may do more harm than good.
10		She is somewhat immunocompromised from
11		this organ anomaly, and I fear that living next to
12		these high voltage lines may doubly increase her
13		chances of developing childhood leukemia. One study
14		I came across, the British journal Medical
15		Journal in June 2005, researchers found that
16		children living within 650 feet of power lines had a
17		70 percent greater risk for leukemia than children
18		living 2,000 feet away or more.
19		I have many neighbors that have young
20		children, and if the line were to be established in
21		Morgan, it would also affect our daycare on Havlik
22		Road. My children spend 10 hours a day there five
23		days a week.
24		Please don't build this power line in
25		Morgan. We moved out to this beautiful place to be

	2/3/2015	Transcript of Proceedings, Volume 5	Page 28
1		in a scenic country setting with minimal	
2		environmental health risks.	
3		After discovering the North Appleton to	
4		Morgan transmission project, I took an initiative t	.o
5		educate myself on as much as I could absorb. It	
6		amazes me the size and sheer volume of every facet	
7		that needs to be dealt with. The groups and	
8		organizations that are involved put tons of their	
9		own energy into the project that is huge in size.	
10		I myself have gone to town meetings, aske	đ
11		questions, and made comments. I asked our town	
12		chairman, Fran Wranosky, about this permanent	
13		financial strain that our children will have to	
14		endure, and other people in the future will have to	
15		endure in the upcoming next 40 years. All he said	
16		was, I don't care, I won't be here in the next 40	
17		years. This was so heartbreaking to hear coming	
18		from someone who is elected in to be a lead	
19		official.	
20		We need help in our little township, and	I
21		think if these lines were to be built, it would	
22		diminish the population in Morgan. Receiving money	
23		from American Transmission Corporation for housing	
24		these two power lines will not help grow or	
25		strengthen the town whatsoever. It will build our	
	L	Poporting 1td (000) 00	

	2/3/2015	Transcript of Proceedings, Volume 5 Pag	e 29
1		township a \$300,000 town hall not truly needed but	
2		wanted by our chairman, but for what, we don't	
3		really use the town hall that we have now. And if	
4		there are no people to come and use it, why would we	
5		build it?	
6		People in general don't want to live next	
7		to these types of structures. The line segments in	
8		Morgan are mainly farmland with marsh given a	
9		super-sensitive ecosystem. It is beautiful scenery,	
10		and as of now, well balanced. How can American	
11		Transmission say that it will put the ground back	
12		together if nature took 100 years to get it that	
13		way?	
14		Ask yourself this, Commissioners. Would	
15		you want to live in a township where there was a	
16		very large substation with three high voltage	
17		right-of-ways leading off into every direction?	
18		These power lines are permanent, and they are not	
19		benign structures.	
20		I truly believe in conservation and energy	
21		efficiency. It is much more cost-effective not to	
22		use a kilowatt than to make one. As of now the	
23		energy trend is going down. I always use energy	
24		efficient bulbs and appliances, and I am constantly	
25		preaching to others about doing the same.	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 30
1		In our area we have hydroelectric dams
2		with renewed licenses. The Township of Stiles has a
3		dam, and Oconto Falls has two large dams. Are these
4		taken into account? We have adequate substations
5		and many power lines established already. If
6		needed, why can't these be slightly upgraded.
7		Oconto County has an excessive amount of
8		liquid manure. Some farmers have so much of it that
9		they have to pay to rent to dump the manure on other
10		people's properties just to get rid of it. We could
11		easily utilize manure digesters, and on a positive
12		note, get free byproduct from it. Why isn't our
13		state looking into federal grants for these sort of
14		things? Why were none of these things discussed in
15		the EIS? And when I say things, I mean no wire
16		energy alternatives.
17		Why does it take another part to hire an
18		engineer like Hans to do scientific calculations to
19		show proof that there is no need for this sizable
20		line. Should the State of Wisconsin be doing this
21		already?
22		One thing that Morgan really has going for
23		itself is excellent quality soil. We need to keep
24		it that way so our local farmers can stay in
25		business.

	2/3/2015	Transcript of Proceedings, Volume 5 Page 31
1		Please collect all data from energy
2		options and reanalyze this project. I'm worried
3		that our wonderful state will be damned to a failing
4		plan of excess electricity and financial loss, not
5		to mention huge disruption of environmental balance
6		which comes into play with this massive high voltage
7		expansion.
8		If proven states if proven facts state
9		that another line segment must be constructed with
10		power lines, please skip Morgan. Use the existing
11		right-of-way on Map A, B, E, F, I, J, M, N. By
12		using this route, you would affect less people and
13		lessen the impact on the environmentally sensitive
14		areas.
15		For my family's sake please skip N-8. And
16		if that cannot be done, please work with American
17		Transmission Corporation to create a completely
18		different route.
19		Lastly, if all else fails, please give us
20		enough money to clear our bank loan for our home so
21		we can leave the area. As a mother, I will never
22		stop trying to protect my children to the best of my
23		ability, and I feel that if this line goes next to
24		our house, we will be damned to live there forever
25		with many risks. They are the most precious assets

	2/3/2015	Transcript of Proceedings, Volume 5 Page 32
1		one can have, my kids.
2		Thank you for listening to what I have to
3		say. I genuinely appreciate being given the chance
4		to speak. Sincerely Jennifer Wilinski.
5		Thank you. I'm sorry I cried through the
6		whole thing.

	2/3/2015	Transcript of Proceedings, Volume 5 Page 33
1		EXAMINER NEWMARK: All right. So I called
2		Joe Jacobs before, but I have John Jacobs. I just
3		want to make sure I didn't mix things up here.
4		JOHN JACOBS IV, PUBLIC WITNESS, DULY SWORN
5		EXAMINER NEWMARK: Are you John Jacobs
6		III?
7		MR. JACOBS: I'm the IV.
8		EXAMINER NEWMARK: Okay.
9		DIRECT TESTIMONIAL STATEMENT
10		MR. JACOBS: Thank you for your time
11		today.
12		I'm speaking on behalf of our family
13		businesses, Green Valley Dairy and Jacobs Brothers.
14		There are others here from our family today to
15		listen to the testimony.
16		I have provided we, I should say, have
17		provided extensive written testimony to for the
18		ag and environmental impact studies.
19		Our main concerns are regarding N-18 or
20		N-18 and N-14. N-1 N-18 will travel through
21		within 2,500 yards or 2,500 feet, give or take,
22		of our dairy facility and our digesters. We have a
23		dairy facility located at N5365 Hintz Road. On that
24		dairy facility, we have a large number of livestock
25		that we feel will be negatively impacted certainly

	2/3/2015	Transcript of Proceedings, Volume 5 Page	34
1		by this transmission line, and what's more	
2		concerning what's as concerning, I should say,	
3		would be the impact it would have on our digester	
4		facility, which is able to produce 1.2 megawatts.	5
5		There's been some great testimony from	
6		others regarding that technology and the ability to	
7		utilize distributed generation as an alternative	
8		source, and there's also been good testimony on the	
9		reduced energy usage and the need for this project.	
10		So I'm not going to touch on that too much.	
11		But the well-being of our livestock is a	
12		primary concern for us, and location of the N-18 is	
13		concerningly close to our facility. Additionally,	
14		we have spent the last three and a half to four	
15		years researching different technology for nutrient	
16		concentration and water purification, and also	
17		running test pilots on irrigation of clean purified	
18		water.	
19		We're excitingly close to implementing	
20		this technology at our facility, and to do that, we	
21		need to utilize center pivot irrigation. And N-18	
22		goes right through three different areas that we	
23		hope to put center pivot irrigation in place. That	
24		center pivot irrigation will allows us to	
25		significantly reduce truck traffic, road traffic,	
	L		

	2/3/2015	Transcript of Proceedings, Volume 5 Pa	ge 35
1		and the best, most efficient way to handle our	
2		resources that we have.	
3		Secondly, and something that hits home for	
4		us as a family, my father and my uncle have spent	
5		their entire life building this business from	
6		nothing. They've worked extensively hard, and now	
7		myself and my two brothers are involved and owners	
8		of the business, and we now contribute extensively	
9		to these projects of taking farmland that has been	
10		divided up, turning it into very productive ground,	
11		large parcels of land that can be very efficient.	
12		We've put a lot of money, effort, into	
13		clearing fence lines, cleaning up ditches that have	
14		been neglected for years, cleaning up wood lines,	
15		and putting in tile lines. These tile lines are	
16		every 40 feet. They're a great thing for	
17		agriculture. They allow oxygen to get into the	
18		soil, provide better crops, build organic matter	
19		into the soil. We're also able to drain the land	
20		appropriately and effectively. And if those tiles	
21		are every 40 feet and the towers are coming in,	
22		certainly that's going to damage and affect that	
23		situation for us extensively, not to mention the	
24		crop loss that we would have in the interim of that.	
25		That's something that really hits home for	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 36
1		us. It's not something that was done in a day.
2		It's not something that was done in a year. That's
3		something that has been done and developed over the
4		last 30 years of my father building our business,
5		and we can't we don't want to see that. There's
6		a significant impact on our business with our
7		ability to be efficient and effective in our
8		operations and how we need to farm the land to
9		produce what we need to produce.
10		We have existing infrastructure in place
11		underground where these power lines and transmission
12		lines are supposed to go. That has all been in
13		place for seven to eight years in anticipation for
14		what we're looking to do in the next year, year and
15		a half to implement our irrigation and move forward
16		with that plan. I just can't stress enough the
17		financial and efficiency impacts that that has on
18		our business and our operations.
19		I would like to touch on so that's
20		N-18, N-18. And what's disturbing about that to me
21		is, yes, it is following an existing right-of-way
22		with an underground natural gas line, but it's not
23		following an existing aboveground right-of-way, and
24		there are countless existing aboveground
25		right-of-ways that should have been selected for

	2/3/2015	Transcript of Proceedings, Volume 5	Page 37
1		this project. We have been and I'm sure a lot	of
2		people in this room have been all over the U.S. an	đ
3		in large cities, and there are transmission lines	
4		everywhere following our large highways and	
5		interstates and the existing infrastructure where	
6		something like this needs to go.	
7		N-14, again the Commission so far or	
8		the plan so far has proven to not follow an existi	ng
9	-	right-of-way and go right across some more large	
10		tillable land base that we have and that we've put	a
11		lot of time, effort, and resources into where we	
12		also implement pivot irrigation. There is an	
13		existing right-of-way about less than a half mile	
14		north of N-14, and I believe that's N-13, I'm not	
15		sure, that that would meet up with.	
16		I guess on a to sum this up, it's not	
17		that we recognize that something is very likely	
18		to be done in this scenario, but and we are goi	ng
19		to be affected, whichever route is chosen. N-4 is	
20		our least objectionable route. N-18 and N-14 run	
21		right through existing infrastructure that we have	
22		and significant plans that we have invested in and	
23		are in the excuse me are in the process of	
24		implementing to make our business efficient and	
25		effective in order for us to survive in this very	

	2/3/2015	Transcript of Proceedings, Volume 5	Page 38
1		competitive agricultural world today.	
2		I guess that's all I have to say right	
3		now. Thank you.	
4		EXAMINER NEWMARK: Okay. Thanks a lot.	
5		(Witness excused.)

1		EXAMINER NEWMARK: So John Jacobs III, do
2		you wish to speak?
3		JOHN JACOBS III, PUBLIC WITNESS, DULY SWORN
4		EXAMINER NEWMARK: All right.
5		DIRECT TESTIMONIAL STATEMENT
6		MR. JACOBS: Thank you for taking the time
7		to come up here today.
8		I just want to follow up with my son
9	;	John's comments. I got my other two boys up here
10		who are really trying to instill the values of
11		sustainable agricultural and so forth. And I'm not
12		going to repeat all the things that he said, but I
13		am concerned about the old business model that you
14		use for putting in power lines. It rewards ATC, and
15		it rewards the utilities handsomely.
16		And I understand the pressure that you
17		folks are under, but I want to tell you that we
18		we spent four and a half million dollars to put in
19		the methane digesters. We have three methane
20		digesters. We produce 1.2 megawatts of power. One
21		of these contracts will sunset here within a year,
22		and at that time we'll go from about eight cents a
23		kilowatt hour down to we're told somewhere two
24		and a half or three cents a kilowatt hour.
25		The methane digester industry in the State

	2/3/2015	Transcript of Proceedings, Volume 5 Page 40
1		of Wisconsin is just totally absent right now, and
2		it's because we have poor policies. I would
3		encourage the Commission to have the courage to
4		start looking at alternatives and look at the future
5		to have distributed generation, have policies that
6		allow for that. Because then we wouldn't have all
7		these folks here so negatively impacted by these
8		lines crisscrossing and all the things that and
9		harm that comes along with it and all the
10		inefficiencies it creates for our farms.
11		And I know you have to do you probably
12		have to do something. I beg of you to put it along
13		the existing right-of-way somewhere so none of us
14		have to hurt. And like John said, I worked my
15		entire career trying to my entire life trying to
16		make these farms sustainable, and all of a sudden it
17		comes up, yeah, here, we can go right across the
18		Jacobs' land because it's you know, they're nice,
19		clear farms and, you know, who cares.
20		Well, you know, it's it's just not
21		right that we're pursuing this kind of business
22		model yet in this day and age when we have all these
23		alternative energy sources coming up. So in
24		addition to everything John said, I just wanted to
25		ask you to consider the policies that you're

	2/3/2015	Transcript of Proceedings, Volume 5 Page 41
1		pursuing as a Commission that are in my opinion
2		antiquated, and we have to begin to look at the
3		future of distributed generation so we don't have to
4		have impose all this harm on these people, and we
5		can we can have the power that we need, we just
6		don't have to use the old business model to do it.
7		So that's all I've got to say. Thank you
8		for your time.
9		EXAMINER NEWMARK: Thanks very much.

1		EXAMINER NEWMARK: Okay. David, looks
2		like Behrend, B-E-H-R-E-N-D.
3		DAVID BEHREND, PUBLIC WITNESS, DULY SWORN
4		EXAMINER NEWMARK: Go ahead.
5		DIRECT TESTIMONIAL STATEMENT
6		MR. BEHREND: My name is Dave Behrend. I
7		reside at the intersection of County C and E in the
8		Town of Morgan. I'm retired with 26 years in the
9		military, and I took my military pension and wound
10		up moving to the Town of Morgan.
11		EXAMINER NEWMARK: Sir. Slow down a
12	;	little.
13		MR. BEHREND: Okay.
14		EXAMINER NEWMARK: Because she's typing
15		what you're saying.
16		MR. BEHREND: Oh, I'm recorded.
17		EXAMINER NEWMARK: It's not recorded.
18		It's all transcribed.
19		MR. BEHREND: Okay. I retired from
20		St. Mary's Hospital also after 35 years there.
21		Before relocating to the Town of Morgan, I
22		checked into the county website and the Town of
23		Morgan website to see if any major construction or
24		changes were scheduled in the town. Nothing was
25		listed that would affect the purchase of a home if

	2/3/2015	Transcript of Proceedings, Volume 5 Page 43
1		we chose Morgan as our retirement destination, in
2		which we did. On the home inspection sheet, the
3		listing real estate agent listed nothing about
4		changes that would occur in the Town of Morgan.
5		At the time, shortly after I moved in, I
6		received notice that American Transmission Company
7		was coming through the area. I didn't even
8		understand what the word was, but that spring I had
9		erected my flagpole 30 feet high. In the Town of
10		Morgan, which there is no constitution or no bylaws,
11		I could not get into the website because of the poor
12		internet signal, and I went ahead and put up my
13		flagpole. It was suggested that I pay a \$70 fine
14		because I was changing the horizon and altering the
15		ground, but it never happened and they waived it.
16		They waived the penalty.
17		I attend the town hall meetings regularly,
18		and at the meeting in May of 2012 I asked the town
19		counsel and our chairman, Fran Wranosky, if they
20		knew anything of the project. No one knew anything.
21		In the months to follow, the Oconto County
22		Executive, Leland Rymer, stopped by to see if I
23		would be interested in purchasing the property, the
24		land behind my home. He also claimed at that time
25		to know nothing.

2/3/	2015 Transcript of Proceedings, Volume 5 Page 44
1	I noticed that the Town of Morgan was
2	receiving \$22,596 annually from ATC. This was from
3	the existing substation and lines that were built a
4	couple of years ago. Still I asked questions, and
5	none of our board had any information about the new
6	North Appleton-Morgan project to provide me.
7	The \$22,596 went towards a new recycle
8	center, and the money was also set aside for a new
9	town hall. Our chairman desperately wants and needs
10	the line to be kept in Morgan. The closer the line
11	is to the new town hall, the more money the town
12	receives from ATC. I feel that the ratepayer and
13	the taxpayer, the public, should be notified in a
14	more transparent and clear sort of way.
15	The line is definitely not needed in
16	Morgan. All northern projects are deferred, so why
17	are we having such a massive line, which is stopping
18	at the Morgan substation?
19	I am very cognitive of my energy use. I
20	use energy efficiently, light bulbs and appliances.
21	Energy trends are declining and forecasted to
22	decline in the next following years.
23	I am worried for the futures of our
24	people. This line will carry a massive debt, and
25	some areas are 300 billion. When we look at the
L	mann Banarting 1td (200) 200 7223

	2/3/2015	Transcript of Proceedings, Volume 5 P	age 45
1		total cost, depending upon the routes, I think the	
2		Wisconsin Public Service Commission should gather	
3		information in all forms of energy: solar, manure	
4		digesters. Oconto County has lots of manure and	
5		provides a lot of byproduct of bedding for the	
6		animals and the biodegradable planting pots. The	
7		hydroelectric field is there.	
8		Personally I feel we are really diving	
9		into the project without looking closely at every	
10		option. In the area of the of the manure by	
11		biodigesters, there's a lot of complaints from the	
12		DNR that they are inefficient and messy, but they're	e
13		moved into too fast. No real constructive policy	
14		and built projects that are approved. So they're	
15		put together very loosely where they spill and leak,	
16		but if a very defined and project was put	
17		together where there would be minimum rules of	
18		constructing and the type of materials to be	
19		constructed, the problem would be lessened.	
20		What we could gain from it here in Oconto	
21		County is we could develop another commodity or two.	
22		The first commodity would be the example I will	
23		use, when you go to the greenhouse in the spring and	
24		you get your little flowers in the plastic planter,	
25		don't use the plastic planter. The byproduct of the	

	2/3/2015	Transcript of Proceedings, Volume 5	Page 46
1		manure digester could squeeze off the liquid. The	
2		leftover clay product could be used as a planter,	
3		fully organic and you put the whole thing in the	
4		ground.	
5		The second commodity would be the dried	
6		fertilizer, use it in your yards, use it in your	
7		beds, and the county would not have to budget a	
8		\$30,000 computer project to give a 3-D picture of	
9		how we contaminate the ground. So we would have th	e
10		digester as the factory, the byproduct of a powered	
11		manure, and a clay pottery. The waste material	
12		would be electricity, and ATC doesn't want that.	
13		Only their electricity seems to be good.	
14		I feel that this line is absolutely I	
15		feel that this line, if absolutely necessary, and i	t
16		should be in the routes of M, N, I, J, E, F, A, and	
17		B, and these letters come from Chapter 10 of the	
18		environmental service manual. They're about	
19		towards the back end, but it lists the environmenta	1
20		impact studies and how the ecological system is	
21		being impacted.	
22		Every footnote in the environmental impac	t
23		study in our land here when we talk about when	
24		Mrs. Wilinski spoke, she's in the N-16 area. To th	e
25		east of her is an N-8 area on these maps. I live o	n

	2/3/2015	Transcript of Proceedings, Volume 5 Page 47
1		the N-4 area. Coming cross-a-ways there's an N-7
2		area. All these are routes that have extreme,
3		permanent environmental impact damage.
4		When they place these poles in the ground,
5		what's not said to you is that some poles could be
6		50-feet deep, some poles could be 75-feet deep, and
7		some poles the encasements can go deeper. In our
8		aquifers, that's the body of water under the ground
9		where our drinking well comes from, nowhere does it
10		say the type of drilling that will be used to bore
11		the hole to protect the water from the arsenic that
12		can leach into our drinking water.
13		Then what it turns around and says in the
14		footnotes of the environmental impact study is that
15		a stipend will be given to the homeowner/landowner
16		to any damage to the water, which means whatever
17		they give you, that's what the contract says. The
18		rest of the cost goes on to you. And if you're into
19		the farming and you get the heavy contamination and
20		you can't do what you've been doing anymore, you
21		might lose our farm. You have your businesses, you
22		could lose your business. ATC gets the profit. You
23		get the loss.
24		So in the rapid ramming of this project
25		going north, yes, Green Bay might need more

	2/3/2015	Transcript of Proceedings, Volume 5	Page 48
1		electricity, but give Green Bay more electricity.	
2		And Green Bay has the Pulliman plant. What they're	
3		saying is shut down the chimney and get rid of the	
4		emissions. Over here they want to take another	
5		plant and put up another chimney. A chimney is a	
6		chimney. Emissions are emissions.	
7		And they talk about one product, the O2.	
8		When you burn coal or oil I'm going to use your	
9		water bottles as an example. One bottle of water	
10		could be the energy coming off of burning coal and	
11		water, which will light these lights. But if you	
12		switch over to natural gas, now you have to use	
13		three bottles of water to light the lights.	
14		And they're going to talk about the CO2.	
15		That's the amount of energy that goes up the chimne	У
16		and doesn't do any work, it's lost. But what they	
17		don't talk about are the heavy metals. You burn	
18		coal, you burn oil, you burn natural gas, you have	
19		heavy metals. The increase of heavy metals in the	
20		atmosphere of Green Bay is up around 17 percent.	
21		That's mercury. Mercury is a heavy metal that gets	
22		into the brain, almost impossible to get out, and i	t
23		does permanent damage. That's not discussed. They	
24		only say that the coal chimney is the bad chimney	
25		and natural gas is the good chimney.	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 49
1		The other thing that is not discussed with
2		everything going natural gas is where is the gas
3		coming from. With the international market of oil
4		coming down, here in the United States we're doing
5		fraccing. About 20 years ago fraccing was given to
6		the country of Canada. Canada does pretty much
7		uncontrollable fraccing, and that's our tar sands.
8		The tar sands is the Keystone Pipeline. This crude
9		coming down from Canada to go to Louisiana, which is
10		100 percent exportable product, can't come down the
11		pipeline by itself. It needs the gas.
12		To refine the gas and get it out of the
13		oil and put it back into the market for the United
14		States, they have to make a new, larger pipeline to
15		get back to those power plants to operate it. Now
16		supply and demand. These new power plants running
17		on natural gas need a lot of gas. You look at how
18		much energy comes off of gas compared to oil.
19		Anything with a chimney is not perfect, so we're
20		getting rid of one problem and inducing another, and
21		with this they're saying that you will have the
22		better world.
23		In the changing of our electrical grid, we
24		used to have the power outage from the Pulliman
25		Plant to Marquette, Michigan, Presque Isle. From

	2/3/2015	Transcript of Proceedings, Volume 5 Page	50
1		that location to our location, we had large eastern	-
2		outages that could be from substation to substation,	
3		transfer station to transfer station. But now in	
4		the recent redevelopment, our electrical grid is	
5		from Alberta, Canada. They're part of our	
6		they're part of the electrical project. And go	
7		there looking to look it up on the internet. You	
8		can go to Alberta, you can go to Ontario, you can go	
9		into Quebec, you can go into Saskatchewan. Each one	
10		kind of has their own Hoover Dam, and they're making	
11		massive electricity on the co-op sales, and they	
12		want to get that from Canada down to Texas. And one	
13		way of doing that is coming through Morgan. They	
14		want to come through Wisconsin.	
15		Now back in '95 when the utilities said we	
16		have a cheap, broken-down grid, they wanted to get	1
17		rid of the maintenance end of it. So our tax money	
18		subsidized the creation of American Transmission	
19		Company. At that time they were deregulated and put	
20		in as a for-profit group, but Wisconsin didn't want	
21		to buy their assets and they let them run free.	
22		It's kind of letting oats run over your lawn. You	
23		can't stop it.	
24		Now they've gained so much power and so	
25		much authority and so much control that when I was	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 51
1		at my first meeting here, I believe it was in this
2		building, and the lady was from Iowa. And I told
3		her how I felt about the power line coming through
4		my backyard, and her quote words, you don't have
5		enough money to stop us. And I believe that because
6		they will come in and put a pole wherever they wish.
7		So now the product of electricity is no
8		longer a utility, it's now a commodity. The
9		government will not interfere with a commodity. A
10		commodity you put in a box, you put it in a thermal
11		container, you drive it down the highway, you push
12		it down the tracks, you fly it through the air, you
13		sail it across the seas. That's a commodity. What
14		do you do with electricity? Electricity you have to
15		build a whole new freeway system. A freeway system
16		of 345-volt wires.
17		Now what they're not telling the people
18		also, Canada wants to bring another wire down into
19		the United States, and that's about 500-volt wire
20		but instead of being AC it's DC. Everybody talks
21		about electromagnetic fields, but what you don't
22		understand, where is the electromagnetic field
23		created.
24		And because it's winter, I'm going to use
25		your snowblower. It has a headlight on it, and you

	2/3/2015	Transcript of Proceedings, Volume 5 Page 52
1		don't turn the switch on. You start the engine, and
2		the light operates. Why? And there's no battery
3		there to do it. And I'm going to use a row of
4		chairs in front here, they're empty. And we run on
5		an alternating current, and if anybody's an
6		electrical engineer out there, I'm not going to say
7		I'm right, but correct me if I can be corrected.
8		But I'm going to send electricity from the right
9		side of the room to the left side of the room. Now
10		I'm going to send electricity back the other way.
11		That's an alternating current. But at the other
12		end, when that electricity comes back, there's still
13		stray voltage sitting there. The speed of which the
14		electrons travel through another field of electrons,
15		collapses, making a voltage, which makes
16		electricity.
17		So you do that with a telephone, a cell
18		phone, there's no problem. You do that with your
19		microwave, there's no problem because there's only
20		seconds throughout the 24 hour day that you do this.
21		But now you take the 345-volt wire, and when you put
22		it into the environmental environment of which we
23		live in. So you can have a hot humid day, you can
24		have a cold humid day like today, you still have the
25		atmospheric surroundings of the wire, and it happens

	2/3/2015	Transcript of Proceedings, Volume 5 Page 53
1		in 300,000 volts or higher.
2		The other additive to the making of the
3		electromagnetic field is that if you're in an
4		elevation of 500 feet to 1,000 feet about sea level,
5		the conditions can be enhanced. And here in the
6		Morgan area, we are in we are at about 850 feet
7		above sea level.
8		So then when a wire comes in and it stops,
9		you have another condition called electromagnetic
10		interference, and the electromagnetic interference
11		can come from a condition where you slide your feet
12		across the floor and you touch the doorknob and you
13		get a little shock. But let's multiply that 300,000
14		times. Let's multiply it by amount of number of
15		which the electromagnetic field bounces back and
16		forth. When that stray voltage sits there, it is
17		not addressed to us, it is not taught to us, it is
18		not explained to us how that voltage releases.
19		So when you go down the what I'm going
20		to call roadside electricity, what you see out here
21		in power lines and what you see on the country road
22		when you drove in, that's roadside electricity.
23		That keeps your lights on. That really has nothing
24		to do with the freeway of wires they want to build.
25		The freeway of wires is a private enterprise of

	2/3/2015	Transcript of Proceedings, Volume 5	Page 54
1		people across the country, and it's not just it's	s
2		not ATC anymore. You look into the other states,	
3		and a couple years back all the states kind of had	
4		their own little electrical grid and their own	
5		little business, and ATC was the one who said we	
6		want to go multi-state. Wisconsin released them.	
7		Still your tax money is paying for it.	
8		And then they said we have to do all these	e
9		other things to buy and sell. So ATC, all they do	
10		is transport the electricity. New generating plants	S
11		are going to make the electricity to put into these	
12		lines. Very little thought is given into who is the	e
13		renewable energy.	
14		The other renewable energy in our area,	
15		because you don't really know who owns the dams	
16		anymore, but World Renewable Energy owns about 450	
17		of the hydro dams now in the Midwest, and they're	
18		looking at putting on what they can, be it	
19		acceptable, but but the subsidies almost 100	
20		percent goes into American Transmission Company.	
21		The people who want to do the good for the	
22		environment get peanuts, so why should they even	
23		try. So they're saying let 's back out of this.	
24		They don't want to put up with the headaches.	
25		So if you're paying millions of dollars to	o

2/3/201	5 Transcript of Proceedings, Volume 5 Page 5
1	make any type of manure-type generation, your
2	efforts to run it are worthless because the money
3	the government's not there to back you up, but
4	everything behind the creation of ATC and how they
5	operate is subsidized by our tax dollars.
6	To give them a higher safety factor, they
7	went ahead and grew and developed another office
8	called MISO, and MISO says, well, generating plant
9	over there, we need more electricity, and generating
10	plant over here, we can have you back down, and
11	we're going to buy electricity over here and sell it
12	to Canada, we're going to sell it to New York, and
13	we're going to sell it to California, and they're
14	going to decide which line it breaks on. But MISO
15	is manmade, and the electrical grid failed in I
16	believe it was 2003 on the East Coast. And why did
17	New York and the East Coast fail, because there was
18	a tree fallen over in the State of Ohio. Recently
19	they had the same problem out in Arizona.
20	So MISO is a human factor. They're
21	reckless, they're careless, and it's not really
22	perfect. And to put the country at a high risk.
23	Now this is where my military comes into play. ATC
24	is becoming so big so fast telling people you need
25	us to put the lights on.

	2/3/2015	Transcript of Proceedings, Volume 5	Page 56
1		At this point, I look at my military	
2		background and I see how easy it's to be a	
3		terrorist. I say take four areas in the country,	
4		anything intersecting. So we talk about Minot,	
5		North Dakota. That's where there's a big generatir	ng
6		plant over there. We talk about the Keystone	
7		Pipeline. We look at what's coming out of New York	s.
8		We look at what's down in Texas. All a terrorist	
9		has to do, and I talk openly to this. When I talk	
10		to our Senators, I talk openly about this. But we	
11		take four areas in the country, and you go to the	
12	1	local pharmacy and buy a little two dollar digital	
13		watch, and you put today's date 2016 and put a time	2
14		on it. A year from now those little watches will	
15		detonate. And like breaking the back of a ship,	
16		this grid's going to sink. And anybody knows in	
17		today's world, the bigger you make it, the easier i	.t
18		falls, the harder it is to repair.	
19		Now when I ask Dave Hovey, when he came t	.o
20		my house in November when it was after our November	
21		meeting in the Town of Morgan, the town chair said,	
22		Dave, if you have an issue, go talk to your Senator	
23		I said, yes, I will. So Dave Hovey and Senator	
24		Cowles came to my house, and we had a very nice	
25		talk. And I asked Dave Hovey, how are you going to	
		Penarting 1td (800) 80	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 57
1		fix this? If the wire breaks out there on the
2		roadside electricity, which gives the utility to
3		your house, your farms and your businesses, you go
4		out there and you fix the wire, the local group
5		comes out. But if you're using a helicopter to pull
6	4	this wire across 500 miles, how do you fix it in the
7		middle of winter? You don't.
8		If you want to look at a failed design,
9		look at the East Coast. Every time there's any
10		anything inclement, bad, or backwards, they're down
11		for three, four weeks at a time, and they have to
12		somehow rely on their roadside electricity because
13		the big stuff where this large power line comes
14		from, the design failed.
15		So, no, Canada does not have to get their
16		electricity to Texas, and California doesn't have to
17		reach the State of New York, but here locally I
18		always say if we kept our grid reasonable. So let's
19		go from here to Marquette, Michigan. That's 200
20		miles, and you keep it 100 miles wide. If this grid
21		fails here, we can slide over towards Marathon
22		County, we can slide over towards Eau Claire and
23		borrow off of those grids. And likewise, if we went
24		east to west, we could come down and do the same
25		thing at a very manageable, safe way of doing
l		Reporting 1td (800) 899-7222

	2/3/2015	Transcript of Proceedings, Volume 5 Page 58
1		things.
2		But these countries these companies are
3		getting big, and they think big and they want big.
4		If they set out to do a project and the goal isn't
5		reached, it goes onto your bill. If they come out
6		and they had to reach a certain investment of money
7		to pay their stakeholders and special interest
8		people, it comes out of your money. They're saying
9		that if we have to build all these new plants, even
10		though what we have is good, it comes out of your
11		money. They are for profit. You never see a loss
12		really of what they're doing, but they put out
13		budgets of what they want to build but it comes out
14		of your money. Look at what your bills have been
15		going up.
16		The other thing that I'd like to read here
17		is is that in the footings that go down 75 feet,
18	:	if they decide they don't want them there, they got
19		to come back in 20 years, and any easement is
20		permanent. It goes on forever, so whoever gets that
21		property gets that easement. But if that cement is
22		in your way, they only have to lower it two feet
23		into the ground and the rest of it, if it's still in
24		your way, so if you're farming and whoever sells
25		land doesn't tell you that there's a big chunk of

	2/3/2015	Transcript of Proceedings, Volume 5	Page 59
1		cement 75 feet in the ground, you might hit it with	ı
2		your drag and break some equipment.	
3		The other thing we have is the Morgan	
4		substation is going to be larger, but it's really	
5		not going to gain that much.	
6		I'm going to start down here, and I'm	
7		going to go to page 42. ATC assumed all shortages	
8		would occur from and after the changes of what to	
9		use, a PROMOD model. So if they say the lights go	
10		out in Oconto Falls, ATC could come through and say	
11		we'll do a study that you don't have a good	
12		electrical system because we're going to include th	.e
13		City of Green Bay. Well, if you put the load from	
14		the Green Bay on our Oconto Falls electrical grid,	
15		it's going to melt. That's basically what they're	
16		saying.	
17		The environmental impact studies that wer	e
18		done, almost all of them said permanent. Some say	
19		we shall, some say we can, but nowhere did it in th	e
20		environmental impact study say they will take care	
21		of you, but everything in it did say permanent.	·
22		The brown poles when I was and I went	
23		to almost every community meeting there was, and th	e
24		brown poles, to sum that up from everybody, they	
25		said it was studied and it was applied out in the	
	L		

	2/3/2015	Transcript of Proceedings, Volume 5 P	age 60
1		State of California, and we thought it was a good	
2		idea so we'll pull these big brown poles in	
3		Wisconsin and that's why we're stuck with them.	
4		It's not really an implied science as how they came	
5		about, but ATC did say that they are easier to	
6		maintain. Are they aesthetically good, no.	
7		So then when Dave Hovey was at my house,	
8		and Dave Hovey, he's kind of the head of the Bay	
9		Lake Project for American Transmission Company	
10		because he did say I looked into selling my	
11		house. I want to move out of Morgan, and I can't.	
12		I took my military retirement and walked into a box	
13		trap because there's nothing there saying these	
14		wires were coming through town.	
15		When speaking to Dave Hovey from ATC, he	
16		said these wires on 180-foot poles won't affect the	
17		horizon, they won't change the landscape, and	
18		they'll add to what we see. So he also said that at	
19		that time if you put a pole in my yard, it's going	
20		to raise the value of my house. And I'm still	
21		wondering how, but all the realtors I talk to, they	
22		just said they don't know where that's coming from.	
23		The generations of spoils, if it takes	
24		on our sensitive environmental impacts that we have,	
25		if it takes 100 years, if it takes 1,000 years to	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 61
1		make it, ATC is going to turn around and they're
2		going to be like another God and put it all back the
3		way it is, no.
4		And then they went on to say that I
5		spoke about the electromagnetic fields. I spoke
6		about the property owners, the rows. Using a row,
7		again, they can do it. And, you know, we talk about
8		we support the 138 wires, but nothing in the
9		Environmental Impact Statement talks about a 138
10		wire. What's the limit it could be poled?
11		But they do not talk about where do they
12		want to put what they call the the insulators. I
13		forgot the full name of them, but they're made out
14		of porcelain. They can come in kind of the Y-shaped
15		design. So if you drive over towards Advance and if
16		you drive over towards Bonduel, you can see kind of
17		a Y-shaped hanger coming off the the poles.
18		These insulators are not limited to one mile.
19		So in our project here, which is about 500
20		miles, they say that they could only put in one mile
21		of a doubled 138. There's nothing in there in the
22		electrical code. So they say use the phrase
23		NERC. NERC is a body of people who interpret code,
24		but the National Electric Code is a law that is used
25		by all the states, and nothing there puts a limit on

	2/3/2015	Transcript of Proceedings, Volume 5	Page 62
1		138. There again, I'm not going to say I'm right	
2		because I'm not an electrical engineer, but I want	
3		an engineer to correct me if I'm saying it wrong.	
4		We also talked about being in the in	
5		the radius of the electromagnetic fields. The	
6		electromagnetic fields they say stay within 200	
7		feet. It does say for the electromagnetic field an	d
8		the electromagnetic interference, that you should	
9		not be around them with heart pacers, you should no	t
10		be around them with medical durable devices. It	
11		does say that you should not park your equipment	
12		around them. It does say that you should be you	
13		shouldn't be driving by them because it can affect	
14		your cars, it can affect your trucks, your farm	
15		machinery. It can affect everything. It comes	
16		right out in the Environmental Impact Statement, an	đ
17		I believe I start finding that stuff was in around	
18		page 91. So if someone in the back room wants to	
19		open that up and go to page 91, and it's in the	
20		fifth chapter, the fifth paragraph, and it goes to	
21		line one and subline four after that.	
22		But it talks about the percent to homes,	
23		it talks about the emissions coming off the wires.	
24		You hear the buzzing sound. In this weather here,	
25		and we can be in the summertime. You talk about	

	2/3/2015	Transcript of Proceedings, Volume 5 Page 63
1		seeing or you talk about hearing the sounds. We
2		had our one statement we talk about here, the
3		crackling coming off the wires, it's called corona.
4		And corona, in the right conditions of
5		daylight, you'll see kind of a purplish light. So
6		if you weld, the gap between the welding stick and
7		your surface, that's kind of the corona. That's the
8		electrons jumping back and forth. And when you deal
9		with 300,000 volts or higher, that's what you're
10		dealing with.
11		We talked about the induced voltage. So
12		we're going to have a pole that's coming up to
13		Morgan, and it's going to be a dead-end wire for the
14		future hopes that they can grow and expand into
15		Upper Michigan. That is kind of on hold, but it's
16		not a promise because Michigan took their their
17		state back, and they fought ATC. And the building
18		used to be and the business used to be controlled by
19		the management office of UMPCo, Upper Michigan Power
20		Company. ATC pushed them out or ATC was pushed
21		out, and UMPCo took over a couple weeks ago, and now
22		they are managing their own power.
23		But people who come from Upper Michigan,
24		if you look at the Wisconsin or if you look at
25		the Presque Isle plant in Marquette, Michigan, the

	2/3/2015	Transcript of Proceedings, Volume 5 Page 64
1		Empire Mine, the Tilden Mine, the Cleveland Cliff
2		mine, Lonce Utilities (phonetic), and all the other
3		small utilities coming out of Escanaba over towards
4		Gladstone, there's plenty of electricity there to
5		take care of the area. If you keep it within 150
6		miles north and south rectangular to about 75 to 100
7		miles wide. So if one square goes out, the other
8		squares can move over.
9		But, no, our little our little area
10		cannot feed electricity to Green Bay. We cannot
11		feed electricity to Wausau. So if Wausau,
12		Milwaukee, Green Bay, Sheboygan, Manitowoc, if they
13		needed more electricity, design the grid and the
14		need around them. If they need more power down
15		there, put the power plant where it's most needed
16		when you have just one. That's kind of like saying
17		your car needs four tires to operate but we're only
18		going to put two on it. So it's a failing idea.
19		And they're you know, to think to go
20		that big gets very expensive. The other thing
21		that's not really put into the cost, and it's going
22		to be a lot like the wind farms. There's really no
23		maintenance put into the wind farms. When a
24		generator quits, it just kind of sits there. They
25		take the blades off of it. When this power line

<b>2</b> ,	/3/2015	Transcript of Proceedings, Volume 5 Page
1		needs maintenance and a pole comes down, you don't
2		know if they're going to move that pole. But if
3		that casement's on your property, you're stuck with
4		it.
5		The other thing you're stuck with is the
6		loss of the property. And a lot of the numbers fall
7		between 4 and 7 percent, but if you're a high-end
8		farm, you lose more. If you're a high-end house,
9		you lose more. If you're from an older farm where
10		the buildings aren't that good but the property's
11		great, you're going to fall in the middle. They
12		don't tell you this, and there's no realtor who's
13		going to come through except the real estate office
14		of American Transmission. They'll say, oh, you're
15		going to do just fine, but that's not the reality of
16		truth.
17		EXAMINER NEWMARK: Sir, do you have much
18		more?
19		MR. BEHREND: No, I have one more page.
20		In the Environmental Impact Statement, and
21		if someone wants to grab that yellow book, it was on
22		page 240. But in the comprehensive plan back then,
23		because remember when I bought my house, nobody knew
24		about it, and I can't move out of Morgan now. I'm
25		stuck there. But it said the Town of Morgan town

	2/3/2015	Transcript of Proceedings, Volume 5 Page 66
1		comprehensive plan, developments and investments, as
2		well as the intersection of County C and E, these
3		areas offer opportunity of increased tax generation
4		and is identified as a smart growth area.
5		So they did know the wires were coming
6		through, and when I did find out, it was a large
7		path that was narrowed down to what it is now, but
8		all those electric people wouldn't back us up a
9		second. And now we're stuck there. We can't move.
10		And when those wires do come through, if they do
11		come through, that's where the new development area
12		is going to be because that area can support new
13		houses and bring in taxes because people are going
14		to line up to live in between these poles and
15		underneath these wires.
16		Thank you for your time.
17		EXAMINER NEWMARK: Can I get a copy of
18		what you read? Thank you.
19		(Witness excused.)

1		EXAMINER NEWMARK: So we have Virginia
2		Behrend.
3		VIRGINIA BEHREND, PUBLIC WITNESS, DULY SWORN
4		EXAMINER NEWMARK: Okay.
5		MS. BEHREND: I have a few photos that I
6		took of the area. Can I show those while I'm
7		talking?
8		EXAMINER NEWMARK: Yeah, sure.
9		DIRECT TESTIMONIAL STATEMENT
10		MS. BEHREND: My name is Virginia Behrend.
11		I live at 3214 County Road C, Oconto Falls in the
12		Town of Morgan.
13	1	After working 32 years in Green Bay at
14		St. Mary's and St. Vincent Hospitals, my goal was to
15	ł	retire in a beautiful rural area. After retiring
16		three years ago, my husband and I moved to our
17		country home on six acres in Morgan.
18		Per the Town of Morgan website it states,
19		the Town of Morgan is home to people who value a
20		rural place to live and work. Healthy natural areas
21		contribute positively to the scenic beauty of the
22		town, promote an abundance of wildlife, offer a
23		variety of recreational outlets, and maintain clean
24		ground and surface water for future generations to
25		enjoy. This is why I chose to retire in Morgan.

	2/3/2015	Transcript of Proceedings, Volume 5 Page 68
1		I enjoy photography as my hobby. I'm
2		blessed now that by stepping outside my house in the
3		morning, I can see a beautiful morning sunrise. I
4		can see a beautiful sunset in the evening and enjoy
5		the natural beauty of the land. I enjoy watching
6		the wildlife in my yard, and I don't use toxic
7		chemicals on my lawn so I have seen hundreds of
8		birds passing through my yard as they are migrating.
9		I have participated in the great backyard bird count
10		the past two years. I have also recently joined the
11		Northeastern Wisconsin Audubon Society and agree
12		with their slogan, making our communities healthy
13		for birds and people.
14		I did not move to Morgan to see ATC power
15		poles. The aesthetic appeal will no longer be
16		present with the high voltage ATC poles and lines
17		towering over us. I oppose the Bay Lakes project
18		and encourage a thorough, complete, healthy
19		environmental study impacting the people of our
20		natural preserves. Thank you.
21		EXAMINER NEWMARK: Thanks.
22		(Witness excused.)
23		EXAMINER NEWMARK: Okay. That's all the
24		appearance slips I have for people who wish to
25		speak. Does anyone else want to speak? No? All

1		MICHAEL SCHINAEL, PUBLIC WITNESS, DULY SWORN
2		EXAMINER NEWMARK: All right. State your
3		name and go ahead with your comment.
4		DIRECT TESTIMONIAL STATEMENT
5		MR. SCHINAEL: My name is Michael
6		Schinael. I'm a landowner in the Town of Morgan
7		where a proposed power line is supposed to go.
8		ATC signed an agreement with me for the
9		last power poles that got put in. It was a lease
10		agreement between me and them. They paid me money
11		for the lease, and I granted them the rights to use
12		it. They said they would not spray under the power
13		lines and not use my private driveway to get to the
14		easement. State Statutes 182.017(7)(d) and (h)
15		clearly state this also.
16		I sent ATC various pictures of their
17		subcontractors on my land, truck and trailer hauling
18		out the equipment on my private drive. They will
19		not admit this. They did not respect the contract
20		that was signed and agreed to. There have been
21		other complaints also from other people: spraying
22		without permission, trespassing, cutting outside of
23		the right-of-way boundaries.
24		Another issue of ATC is the stray voltage
25		from a farmer in Morgan just down the road. He went

	2/3/2015	Transcript of Proceedings, Volume 5 Page 71
1		through two herds of cows and had to sell. The
2		power company came out and tested for stray voltage.
3		I believe this is a conflict of interest,
4		and a private stray voltage tester should have been
5		used. Milk production was good until the new power
6		lines were put in. The farmer/landowner should not
7		have to foot the bill for this.
8		ATC wants land for the new line on my
9		property. They will be taking down trees. The
10		trees that are cut down should be paid for by ATC.
11		We should be paid on a lumber grade for these trees,
12		not just firewood scrap value.
13		Also, they are making some of the adjacent
14		land next to the power line not buildable. A lot of
15		the towns say you're supposed to stay about 60 feet
16		away or different variances. If those power lines
17		weren't there, you could go 10 feet to the lot line.
18		So we're losing another 50 feet that should be paid
19		for by ATC if they want that property.
20		The price of the land that was offered the
21		last time of the easement was low. We don't want to
22		lease our land. The price we should get should
23		reflect the highest possible price paid for the
24		amount of acres leased, not based on a 40- or
25		80-acre tract.

	2/3/2015	Transcript of Proceedings, Volume 5 Page 72
1		These violations by ATC must be
2		investigated before another transmission line is
3		constructed.
4		EXAMINER NEWMARK: Thank you very much.
5		(Witness excused.)
6		EXAMINER NEWMARK: All right. Well,
7		thanks everybody. They're thoughtful comments, and
8		of course they will all get to the Commissioners and
9		they'll be reviewed as they make their decision.
10		We'll be here until 6:00 in case we get
11		more people wanting to speak, but right now we'll
12		stand adjourned until we get a few more comments and
13		then come back into session and take those comments.
14		Thanks.
15		(Break taken from 4:34 p.m. to 6:00 p.m.)
16		EXAMINER NEWMARK: Well, let's get back on
17		the record and I'll ask one time if anyone else
18		wants to make a comment? Really? Nobody? We
19		waited so long.
20		All right. Thanks very much. We're
21		adjourned.
22		(The hearing adjourned at 6:01 p.m.)
