ANNUAL TELECOMMUNICATIONS REPORT GLOSSARY OF TERMS

| | |
|---|---|
| Access Line | Central office line equipment, or equivalent, and all outside plant facilities, or equivalent, required to connect the serving central office with the customer premises via physical connection, frequency transmission, and/or time slot transmission. From an engineering perspective, a channel connection is at a DS0 level. A DS0 level is a 4 KHz voice channel or a 64 kilobits per second digital channel. |
| Analog Signal | A signal that varies in a continuous manner such as voice or music. An analog signal must be contrasted with a digital signal which can assume only discrete values. |
| Cellular System | A high capacity land mobile radio system in which an assigned frequency spectrum is divided into discrete channels that are assigned to a cellular geographic serving area. |
| Central Office | A switching unit in a telephone system providing service to the general public, having the necessary equipment and operating arrangements for terminating and interconnecting lines and trunks. |
| Centrex | A service for customers with many stations that permits station-to-station dialing, one listed directory number for the customer, direct inward dialing to a particular station and station identification on outgoing calls. The switching functions are performed in a central office (stand alone, host or remote). |
| Channel | An electrical communications path between two or more points. A single pair of wires may provide more than one channel. A channel may also be provided by microwave. |
| Customer | A person who uses a telephone as a subscriber. |
| Digital Signal | A signal that has a limited number of discrete states. This may be contrasted with an analog signal that varies in a continuous manner and may have an infinite number of states. |
| Equal Access | The ability of the subscriber to use any long distance service by dialing the same number of digits. |
| Exchange | A defined area served by one or more central offices regardless of technical serving arrangements within which the company furnishes service at rates and rules prescribed for that area in the company's filed tariffs. The area is not necessarily marked by political boundaries or the location of host or remote switching units. |
| Extended Area Service (EAS) | The ability of a customer to call customers in other exchanges at no additional charge or at an additional charge per tariff. |
| Extended Community Calling (ECC) | The ability of a customer to call customers in other exchanges at rates usually above EAS rates but below toll rates for comparable distances. Rates generally include a duration element. |
| Feature Group A | Line-side originating and terminating LATA access for which an originating subscriber dials an assigned telephone number that connects to a specific interexchange carrier (IC). The IC returns a tone to signal the caller to input additional generated digits of the called number. |

ANNUAL TELECOMMUNICATIONS REPORT GLOSSARY OF TERMS

| | |
|---|--|
| Feature Group B | Trunk-side originating and terminating LATA access for which an originating subscriber dials a 950-WXXX number (where W=0, 1 and XXX is the carrier access code (CAC)), which is translated to a specific XXX carrier trunk group. Optional rotary dial service and ANI may be available. |
| Feature Group C | Trunk-side LATA access for AT&T-Communications generally on a direct basis between each end office (EO) and an AT&T-C switching system. |
| Feature Group D | Also referred to as equal access. It is trunk-side LATA access affording call supervision of an interexchange carrier, a uniform access code (10XXXXX), optional calling party identification, recording of access-charge billing details and presubscription to a customer specified interexchange carrier. |
| FX-IN | A nonswitched service where the customer of the company is connected to and receives switching service through central office equipment located in another exchange area. |
| FX-OUT | A switched service where facilities are provided from the central office out to the exchange boundary where it meets the line from a foreign exchange subscriber. |
| Host Switching System | A switching system that provides centralized control over most of the switching functions of one or more remote switching units. The host switching system usually provides trunk access to the operating company intraLATA networks. |
| Local Access Transport Area (LATA) | A geographic area within which an operating company may offer its telecommunications services. |
| Mobile Telephone | A service which provides radio telephone communication from a mobile vehicle to another vehicle or to a regular telephone. |
| Paging | A service which provides one-way signal or voice communication over a radio channel to a miniature receiver carried by the customer. |
| Pair | Two wires of a single circuit. |
| Pay Station | A telephone which normally requires all users to deposit one or more coins or use a credit card to complete a call. |
| Private Line Service | Channel or circuit rented for private use and not intended to be connected to the general distribution system. |
| Private Branch Exchange (PBX) | A manually, or operator controlled switching system, usually on the customer's premises, which serves that customer's telephones over a common group of lines from the central office. |
| Radio Common Carrier (RCC) | A company which furnishes public telecommunications service using one or more radio channels. |
| Remote Switching Unit (RSU) | An electronic switching system that is remote from its host or control office. All of the central control equipment for the RSU is located in the host switching system. |

ANNUAL TELECOMMUNICATIONS REPORT GLOSSARY OF TERMS

| | |
|---|---|
| Route Miles | Total number of route miles (to the nearest mile) of operating plant facilities including drop wire in the exchange. One route mile may consist of: <ol style="list-style-type: none">1. One mile of roadway with any combination of outside plant facilities on any number of rights-of-way.2. One mile of a cross country route with any combination of outside plant facilities.3. One mile of point-to-point microwave or radio link.4. One mile of plant on either side of a limited access highway or natural barrier, such as a navigable waterway.5. One mile of joint use line where the utility either owns the facility or leases space. |
| Stand Alone Switch | A central office switch which has no remote switching units (RSUs) subtending it. |
| Trunk | A communications path connecting two switching systems in the establishment of an end-to-end connection. |
| Wide Area Telephone Service (WATS) | Customer leased access line or lines connected to the nationwide network over which an unlimited number of calls can be made for a fixed monthly charge. |
| Wire Center | The location of one or more local switching systems. A point at which customers' loops converge. |

AFFILIATED INTEREST TRANSACTIONS

Provide a summary of transactions under established affiliated interest contracts and arrangements (see Wis. Stat. § 196.52, for "affiliated interest" definitions). Use the space below to report transactions with individual affiliates and multiple affiliated interest agreements or, at the utility's option, with individual affiliates and a single agreement. LONG-TERM DEBT

Report data requested and show total for each long-term debt account at end of year. Information concerning the following debt issues may be reported on individual lines in aggregate: REA/RTB 2%, REA/RTB 5%, & REA/RTB 7%. In addition, REA/RTB and FFB debt, respectively, within a range of 200 basis points may also be reported in aggregate on individual lines. If reported in aggregate, a range of dates may be reported in columns (b) and (c) as well as a range of interest rates in column (d) and a composite interest rate in column (e). If aggregation is not utilized, column (e) should contain the same interest rate as reported in column (d). For account 4050 report only the amount of debt anticipated to be repaid in one year or less.
