1. The data used in calculating rate base are averages.
2. Calculate those averages by summing the first-of-year and the end-of-year figures for each account and then dividing the sum by two.
3. Note: Do not include contributed plant in service, property held for future use, or construction work in progress with utility plant in service. These are not rate base components.

FULL-TIME EMPLOYEES (FTE)

Use FTE numbers where FTE stands for full-time employees or full-time equivalency. FTE can be computed by using total hours worked/2080 hours for a fiscal year. Estimate to the nearest tenth. If an employee works part time for more than one industry then determine FTE based on estimate of hours worked per industry.

Example: An employee worked 35% of their time on electric jobs, 30% on water jobs, 20% on sewer jobs and 15% on municipal nonutility jobs. The FTE by industry would be .4 for electric, .3 for water and .2 for sewer.

 - b. Record as a flushing hydrant where the lead size is less than 6 inches or if pressure is inadequate to provide fire flow.
2. Explain all reported adjustments in the schedule footnotes.
3. Report fire hydrants as within or outside the municipal boundaries.

Number of distribution valves operated during year:	2

WATER OPERATING SECTION FOOTNOTES

Water Operation & Maintenance Expenses (Page W-05)

For values that represent an increase or a decrease when compared to the previous year of greater than 30%, but not less \$2,000, please explain.

The district incurred greater Outside Services expense as a consequence of the removal and installation of the well pump and pressure tank.

Taxes (Acct. 408 - Water) (Page W-06)

Explain zero value(s) for PSC Remainder Assessment and/or Social Security.

The utility received a check from PSC in the amount of \$7.78
The utility also received and paid an assessment for PSC remainder assessment in the amount of \$7.78

Water Utility Plant in Service --Plant Financed by Utility or Municipality-- (Page W-08)

If Additions for Accounts OTHER than 316, 343, 345, 346 and 348 exceed \$10,000, please explain. If applicable, provide construction authorization.

The utility installed a new vertical turbine pump to replace one that dated back to the 1940s or earlier at a cost of \$16,498. You pay what you have to and you have to have a pump.

The utility installed a new 4,000 pressure tank to replace one that dated to the 1940s or earlier, at a cost of \$31,725. Ditto above. This system was originally a condensed milk plant which went belly up more than 50 years ago.

Meters (Page W-19)

Explain all reported adjustments.

The adjustment was to bring reported meters into agreement with actual number of meters in service and on hand, as reported by the utility

If Tested During Year column total is zero, please explain.

The utility considers it a matter of economy to replace meters which appear to be due for replacement, because the utility is too small to maintain testing equipment and commercial testing is too expensive. The cost benefit ratio is out of balance in favor of replacement vs. testing.

Explain program for replacing or testing meters 1" or smaller.

The utility does not own testing equipment because it has so small a number of meters, it is more economical to replace them when they appear to be inaccurate.

Ss. PSC 185.83(2) states "Station meters shall be maintained to ensure reasonable accuracy and shall have the accuracy checked at least once every 2 years." Are all station meters being tested every two years? Answer yes or no. If no, please explain.

If what you mean by station meter is a meter on a pump in the station, our pump is brand new and should need no testing for two years. If you mean water meters, the utility is too small to afford testing equipment and commercial testing is too expensive. The utility has elected to forego testing and merely replaces all meters which appear to be in need of replacemnt, as a matter of economy.
