

# **Weak Link Calculation**

## **ASTM F1804**

**Andrew Baader**

Gas Pipeline Safety Engineer

Public Service Commission of Wisconsin

**February 5<sup>th</sup>, 2026**

# Federal Code

## **49 CFR 192.321(c)**

Plastic pipe must be installed so as to minimize shear or **tensile stresses**.

## **49 CFR 192.329(b)** [main] & **49 CFR 192.376(b)** [services]

For each pipeline section, plastic pipe and components that are pulled through the ground must use a **weak link**, as defined by § 192.3, to ensure the pipeline will not be damaged by any excessive forces during the pulling process.

## **49 CFR 192.3**

**Weak link:** means a device or method used when pulling polyethylene pipe, typically through methods such as horizontal directional drilling, to ensure that damage will not occur to the pipeline by exceeding the **maximum tensile stresses allowed**.

# Viscoelasticity

Impacted by:

- Material properties
- Stress (force and area)
- Temperature
- Time under strain

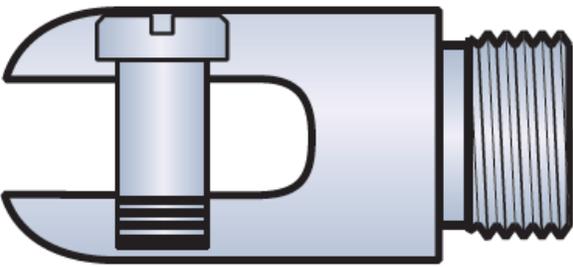

# ASTM F1804

## Standard Practice for Determining Allowable Tensile Load for Polyethylene (PE) Gas Pipe During Pull-In Installation

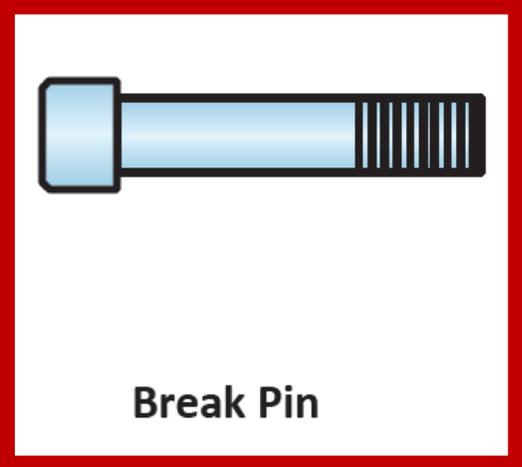

This practice provides a means to determine an **allowable tensile load** (ATL) value for a polyethylene gas pipe that is to be installed underground using methods that pull the pipe into a trench (cut or plowed), bore hole, casing pipe, or the like. The ATL value takes into account:

- Material tensile yield strength
- Pipe size and wall thickness
- Pipe temperature
- Duration of pull

# Pin Break Force Identified by Color

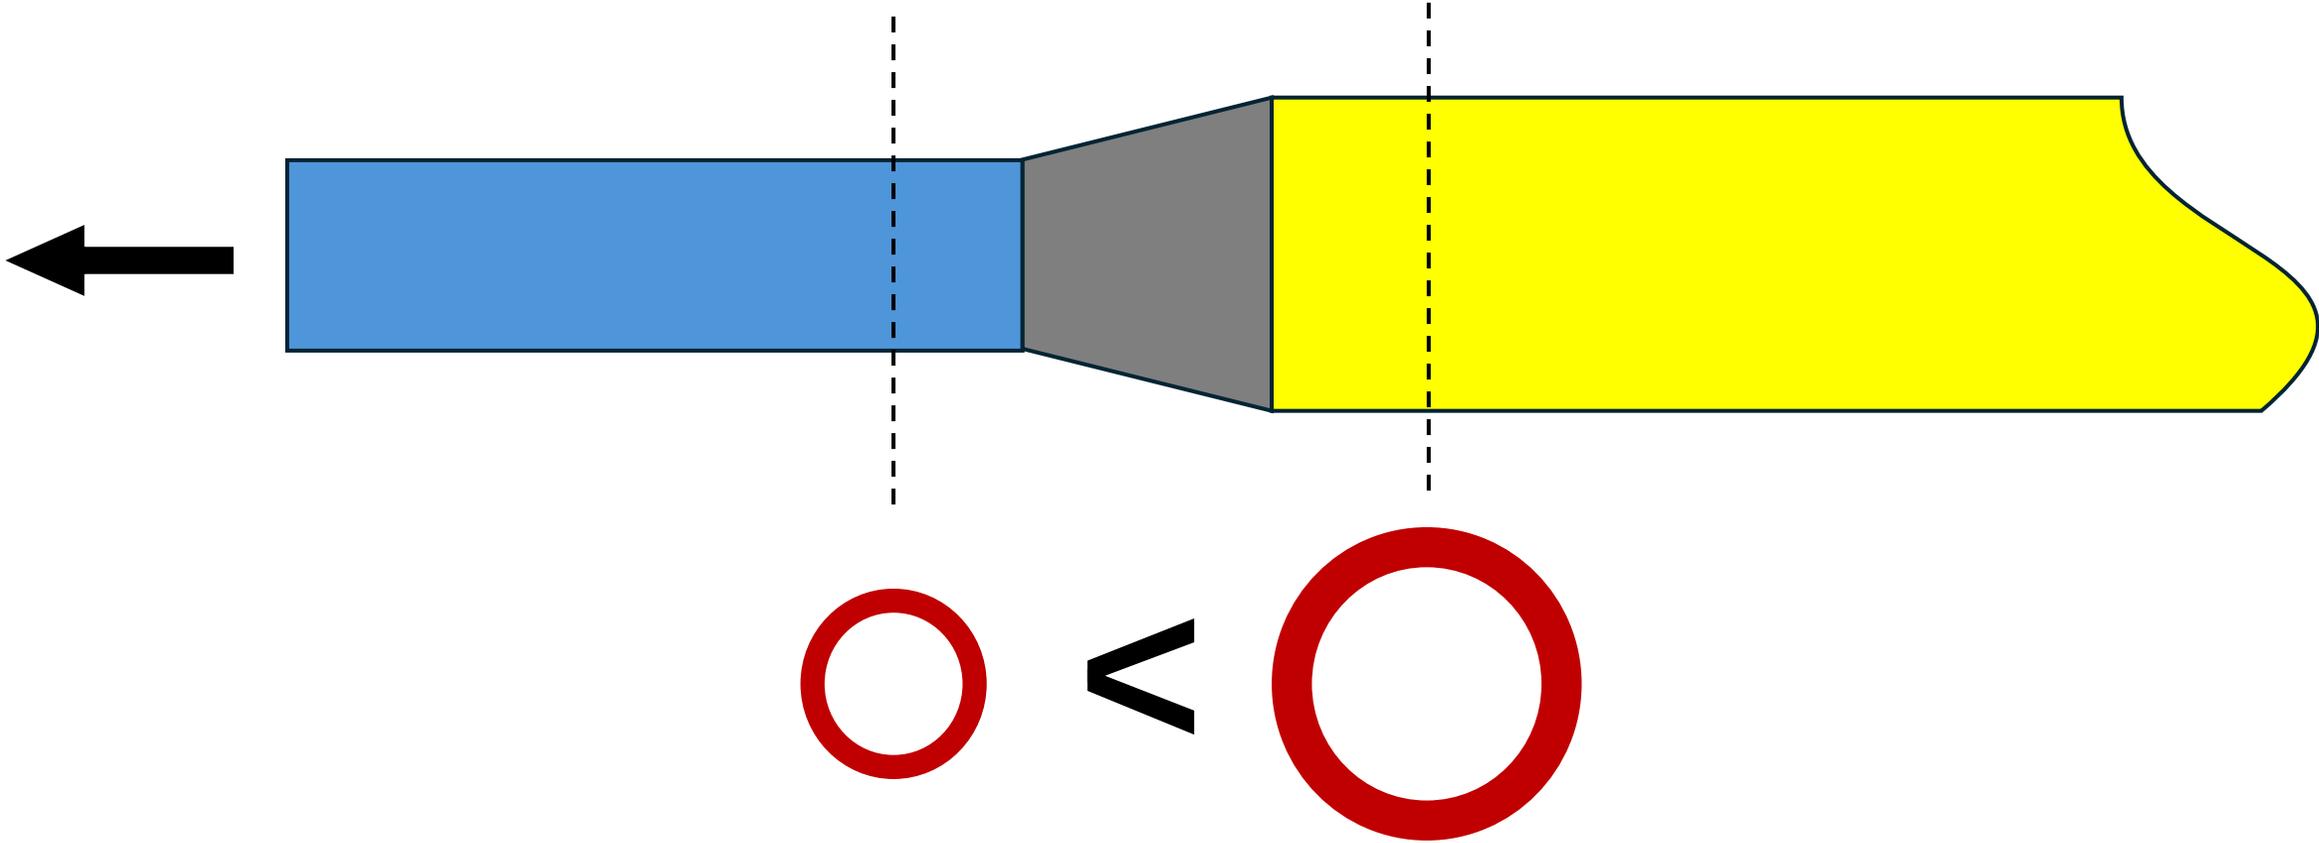

Part No. (5 pins/kit)	Breaking Point (+/- 5%)	Color Code
00565-015*	150 lb	Black/Red
00565-025*	250 lb	Brown
00565-030*	300 lb	Black/Orange
00565-040*	400 lb	Gray
00565-070	700 lb	Green/Orange
00565-075	750 lb	Yellow
00565-100	1,000 lb	Orange
00565-120	1,200 lb	Purple
00565-130	1,300 lb	Black
00565-150	1,500 lb	Red
00565-200	2,000 lb	Blue
00565-200S	2,000 lb	Gray/Yellow
00565-250	2,500 lb	Green
00565-250S	2,500 lb	Blue/Red

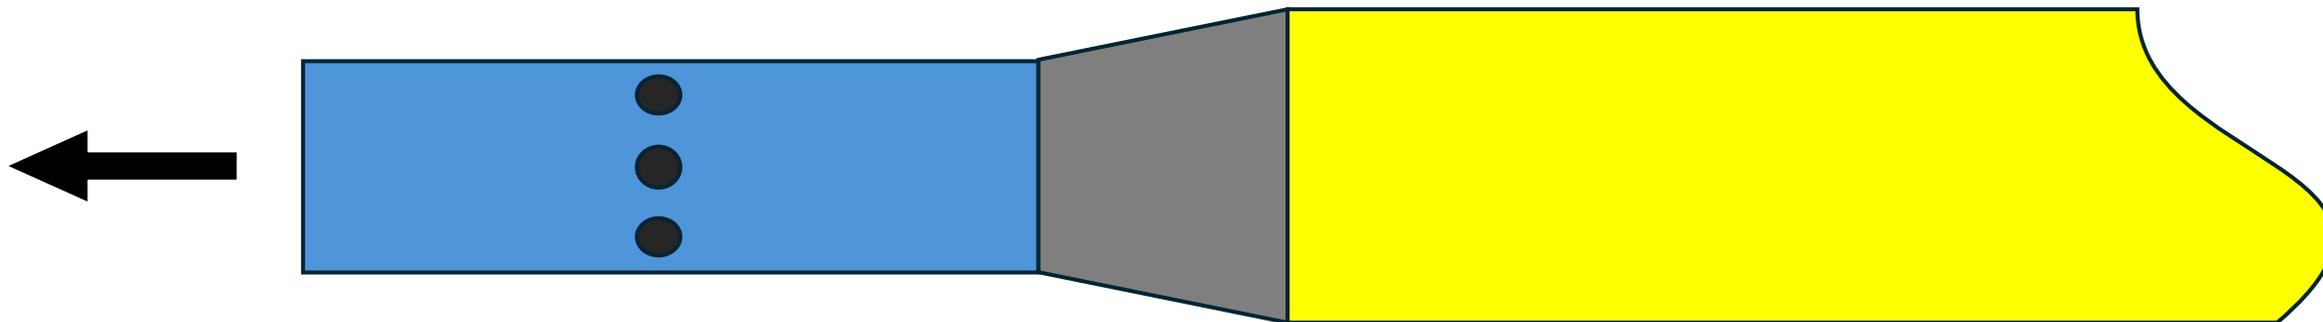

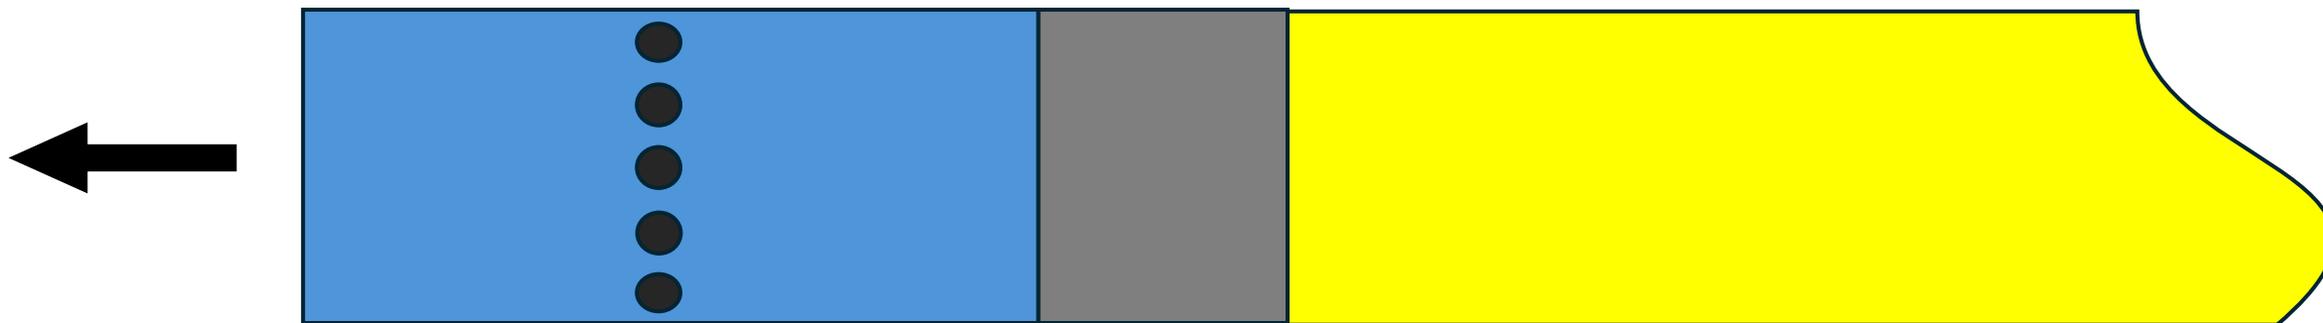

# Smaller Pipe

# Smaller Pipe

# Drill Holes

$$ATL = f_y f_t T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

$$\boxed{ATL} = f_y f_t T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

**Allowable Tensile Load (*lbf*)**

maximum tensile load that does not permanently stretch pipe  
(may be rounded to the nearest 50 lb)

$$ATL = f_y f_t T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

**Tensile yield design (safety) factor**

=0.4 recommended for HDD

$$ATL = f_y \boxed{f_t} T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

**Time under tension design (safety) factor**

1.0 for pulls  $\leq 1$  hr

0.95 for pulls  $\leq 12$  hr

0.91 for pulls  $\leq 24$  hr

$$ATL = f_y f_t T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

**Tensile yield strength ( $lb_f/in^2$ )**

pipe temperature at installation

PE2708  $\leq 80^\circ F$ : 2600  $lb_f/in^2$

PE4710  $\leq 80^\circ F$ : 3500  $lb_f/in^2$

<b>Maximum Sustained Temperature, °F (°C) <sup>(1)</sup></b>	<b>Multiplier <sup>(2,3)</sup></b>
40 (4)	1.25
50 (10)	1.17
60 (15)	1.10
73 (23)	1.00
80 (27)	0.94
90 (32)	0.86
100 (38)	0.78

$$ATL = f_y f_t T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

**Outer Diameter (*in*)**

“Two inch” = 2.375 in

“Four inch” = 4.500 in

“Six inch” = 6.625 in

---

Nominal Pipe Size (IPS)	Outside Diameter
1/2	0.840
3/4	1.050
1	1.315
1 1/4	1.660
1 1/2	1.900
2	2.375
2 1/2	2.875
3	3.500
3 1/2	4.000
4	4.500
5	5.563
6	6.625
8	8.625
10	10.750
12	12.750
14	14.000
16	16.000
18	18.000
20	20.000
22	22.000
24	24.000

---

Nominal Tubing Size (CTS)	Outside Diameter
1/4	0.375
3/8	0.500
1/2	0.625
3/4	0.875
1	1.125
1 1/4	1.375
1 3/4	1.875

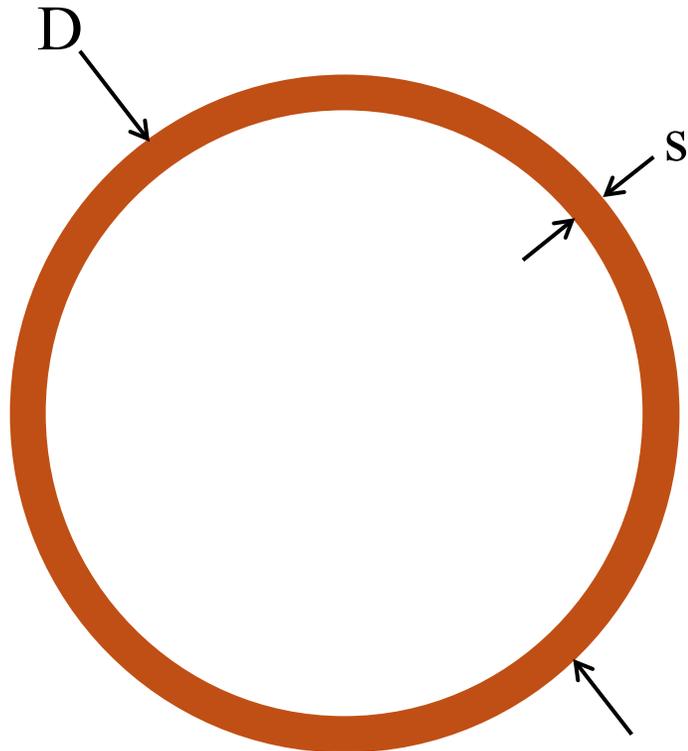

---

$$ATL = f_y f_t T_y \pi D^2 \left[ \frac{1}{\overline{R}} - \frac{1}{\overline{R}^2} \right]$$

**SDR (Standard Dimension Ratio)**

$$ATL = f_y f_t T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

**SDR (Standard Dimension Ratio)**

$$SDR = \frac{D}{s}$$

7, 9, 11, 11.5, 13, etc.

$$ATL = f_y f_t T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

$$ATL = f_y f_t T_y \pi D^2 \left[ \frac{1}{R} - \frac{1}{R^2} \right]$$

ATL = (safety factors) \* (strength) \* (area)

ATL = (safety factors) \* (yield force)

Example:  
**2" SDR 11 MDPE**

$$\text{ATL} = 0.4 * 1.0 * 2600 \frac{\text{lb}}{\text{in}^2} * \pi * (2.375 \text{ in})^2 * \left( \frac{1}{11} - \frac{1}{11^2} \right)$$
$$= \mathbf{1523 \text{ lb}}$$

$$f_y=0.4, f_T=1.0, T_y=2600 \text{ psi (MDPE)}$$

<b>Nominal</b>	<b><math>D_o</math> (in)</b>	<b>SDR</b>	<b>ATL (lb)</b>
1/2" CTS	0.625	7	<b>156</b>

# What we look for

# What we look for in O&M Plan

- Are values appropriate?
- Are there temperature factors?
- Procedures to check for temperature?
- Do they limit pull duration to under 1 hour or have factors to reduce pull force?
- Lower values for MDPE compared to HDPE

# What to look for in Field

- Procedure is followed
- See the weak link (take apart swivel)
  - and mfr guide to link pin color to force
  - Did the drill crew check it?
- Temperature of pipe
  - What measurement device is used per Manual?
  - Is it in calibration?
- Duration of pull

# 2021 ASTM F1804 Changes

- 100°F → 80°F
  - Direct sun heats pipe
    - Especially black pipe
  - Sunny days often require shading pipe
- HDPE: 3,000 → 3,500  $lb/in^2$
