

## Instructions on the use of Tables 1-4 of the PSC/DNR Transmission Line Application Filing Requirement (AFR)

The impact tables for this version of the PSC's Transmission Line AFR have been standardized in order to improve the efficiency of Commission staff's analysis of CPCN and CA projects. It is important that AFR tables be fill out properly as they are a crucial component of the PSC review process.

Tables 1-5 are used to summarize impacts associated with the project. Tables 1-4 have fields with imbedded formulas. Those fields are protected and are shaded gray. Each table file has two worksheets; one with a sample table populated with sample data and a second worksheet with a table ready to be populated with project data. Pay close attention to the footnotes as they will describe techniques for managing some of the more common situations encountered in transmission line routing.

Because of the complexity of many transmission line projects it is recommended that you confer with Commission staff before beginning work. Before conferring with staff make sure that you have carefully looked over the standard tables. In this way you will be better prepared to ask questions of staff. In addition, make sure that the people who will actually be filling in the tables attend any such meetings. To consult with staff please contact William A. Fannucchi of the Gas and Energy Division at 608/267-3594 or [william.fannucchi@psc.state.wi.us](mailto:william.fannucchi@psc.state.wi.us)
